I was wondering if anyone have the frequency and pl that Southwest ambulance in Tucson is using. what I do know is that their call sign is Maricopa 300 and the out frequency is 155.385. I would like to have the in frequency and the pl if anyone has it. Please respond by e-mail to dsmall@sisna.com. Thanx.

After dealing with AES for 5 years over the counter in Las
Vegas, a agree.

I'm guessing that you're dealing with the headquarters in Milwaukee,
right? I guess I'm lucky that I'm about 15 minutes from the Orlando
store. Never had a problem with anything there.

this is a homebrew newsgroup.

build it, measure it, modify it!

Jim

There is some really good shareware on this very topic. look for it at
the ARRL. (American Radio Relay League)

Not to make this sound like we are ganging up, but I suspect this is an
isolated incident as well. I have been dealing with AES for 15 years,
and have always received great service from the stores I have dealt
with which include CLearwater, Milwaukee, and Las Vegas.

What is the big deal about CB?
I have a CB in my car w PA horn. Used it at Field Day. Nice when I am
on the highway too in a traffic jam seeking traffic info.
I also have a 2m ham FM radio.
Plan to add a 2m/70cm FM radio and an HF radio soon.
I will probably also buy a pair of the new FSR radios for my brother
and I to use on trips.

That assertion shows that you know little of the earlier history of
radio, Hans ... *most* of the inventions of the early days were made
by hams ... many of whom were also professionals, but very active
hams who blended their professional and recreational interests in
radio into a lifelong career/hobby ...

I suggest that you try to find some of the excellent historical works
compiled by the Radio Club of America ...

You and others do a VERY GROSS disservice to our predecessors
by insisting that "hams never led the way in advancing radio technology"
that's a pile of crap and a poor excuse for the lazy, incompetent masses
we have today ...

I knew hams were boring and fat but I thought they were at least
intelligent.
Get this straight, I AM NOT A VOLUNTEER for the ARRL. The ARRL
as a VEC is acting as an arm of the FCC and to the extent
they represent the FCC they may not deny a person VE status
without JUST CAUSE.

If I was an ARRL volunteer that would be another matter.

Burt

Sorry Dude!

As a longtime hobbyist and customer of MANY mail-order outfits (goes with the territory in this hobby!), I agree with the others that AES is a top-shelf operation.

Have some mercy...one customer service problem does not make them crooked!

Charlie

I've had nothing but GREAT service from AES, year after year. Seems like
you came across an isolated incident. Call someone high up there, I'm sure
they'll straighten it out. Why would AES need to bring your order to the
Post Office? Doesn't everything efficiently leave there via UPS?

For a couple of months I've been receiving the w1aw bulletins: propagation,
dx and keplerian elements. I have a couple of questions:

1. What are all those planetary indexes/sunspot numbers the propagation
report talks about? What do they mean and how are they obtained?

2. What exactly is the keplerian elements bulletin used for? How do you
interpret it? What is a keplerian element?

So what? I am "very familiar" with, say, comp.os.linux.development.apps
and a dozen of other computing-related newsgroups that I've been
reading for several years yet I never posted any adds in there because
it is just not right.

> Spam Security is ON:
> Remove "NOSPAM" from noted e-mail address to contact me.
> *** I will NOT buy any products or visit web sites from the SPAM. ***
^^

Yet you yourself use spamming tactics on purpose of selling your goods.
Isn't it a contradiction? Adds like yours should go to *forsale groups.

Your "net-fame" is well known to many readers of van.general,
the group which was flooded with your junk the last year. Looks
like you became a little wiser since then (after a couple of ISPs
pulled a plug on you because of complaints?) but you need to
become wiser yet.

> Because this is an AMATEUR RADIO newsgroup for Hams.
> if someone is not a ham then it makes a big difference in
> the weight a reader gives to a posting.

Gee, are you really that picky? Hell, I don't care what their call
is,
whether they have a call, or what class of license they have been
granted. I also don't care if they don't give their name, like you
don't.

Just so long as they have something interesting, educational,
or funny to say. Or even if they have a question, or even
a silly question. I give weight to a posting based on it's
content, not it's signature.

It's amateur radio after all, not some secret-rite lodge or exclusive
religious cabal, so passwords are not needed to authenticate the
validity of someones views.

73, de Hans, K0HB

~~~
This is a test of the emergency signature system. Were this an
actual
signature, you would see amusing mottos, disclaimers, a zillion net
addresses, or edifying philisophical statements. This is only a
test.

Better look again, and a little closer. NOBODY in the U.S. can run AM
below 28.5 Mhz. I like to run AM on 10 meters but I keep it from
29.0-29.15 Mhz. because that's where its usually done.

All,

Well after reading endless weeks of old buddy Burt and his rather inane clatter. I am still surprised that people are still giving him the time of day. The simple thing to do instead of spouting on about his assinine ramblings which the only reason he is doing it is to stir up shit, and he is doing a good job of it.. If you ignore the problem it will go away.

Just to practice what I preach, I will let it be at this, don't go away mad, Burtie boy just go away..

>practical use for them.

Dear Hans,

You are confusing the terms "invention" and "discovery" here.
Electromagnetic waves were discovered by Hertz, but Marconi
was the first to put them to such a profane use as communication.

There are other things, that have been gradually invented by a number
of people, e.g. TV or aircrafts, but with radio things are quite clear.

44. The real ham

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-01 00:00:00 UTC
From: burt1@rocketmail.com
Message-ID: <867752793.24716@dejanews.com>
Source record: 194602
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

What Burt preaches is really true. I usually only operate digital modes, but when I listened to some VHF and UHF repeater activity today, what Burt has been telling us all along really makes sense. When I got into this hobby some 4+ years ago, I operated phone most of the time. Typical contacts were spent talking about how to position oneself correctly to hit the local machine, or how close one needs to speak into their microphone. Occasionally things got exciting and people talked about the bad hum in their radio, or even about the weather. What happened when I turned my radio back on today and listened to the same people I used to chat with years ago?

"Hey, I'm closer to the mic, how's it sound now?"
"Let me see. Maybe if I stand up you'll hear me better."
"Yeah, some WD-40 on that tractor should fix the squeaking noise."
"Hi hi"
"How's the wife?"

Along with this redundant nonsense, the same people who had gotten their licenses years ago STILL had no idea how to use their radios. Failed autopatch after failed autopatch, callsigns getting mixed up, and piss poor operating in general. Not to mention all the weird codes that must have come from some war movie (roger, out, kick it back, etc.). Even the people who I considered hard core operators years back are doing nothing but testing their microphones (probably the same ones they had years ago) and talking about how strong their signals are, STILL. Any contact not containing one or more of the phrases above was just a boring discussion about how somebody got started out in ham radio, what type of "rig" they have, how "mic shy" they are or were, etc. Even repeaters linked up between different states are the most boring thing to force oneself to listen to. Nothing but old men talking about their various retirement activities. Sad, really. I'd better stick with digital and satellite operating.

> *simple* and small fm transmitter?

Start here: www.ecn.bgu.edu/users/bsngd/fmradio.html

Then here: http://elektron.et.tudelft.nl/~stern/pulsar/scheme.htm

and here: http://www.gqrpclub.demon.co.uk/sm0vpo_1.html

Then, go get a copy of Radio Electronics November 1991, and read
"Simple FM Transmitter: This handy FM Transmitter makes a great
one-evening
project, even for first-time builders". Melton describes what each part
does and why it's needed.

Don't transmit in violation of any legal requirements.

Have fun.

>ve2ifr

H'lo, Vince - hope this message is still topical...two members of my
radio club have the HTX-242, and one has also had the problem you
mention. RS gave him a replacement mike in exchange for the problem
one, without any fuss or muss. Polling half a dozen ops on our local
repeater didn't elicit any unusual number of complaints regarding the
Radio Shack unit. To the contrary, all ops with any experience with it
say they're pleased with it - even the OM who had to drive a couple
miles to the store to swap his bum mike for another. And yes, I use
one as my 2-meter base station. Mine's a year old, and no problems
thus far. I just wish it were an all-mode, since my ICOM 2-meter
all-mode is on the blink...

>
>Any help is much appreciated....ON4CEL, Franky

How long's it been up, old man? Sounds like y'need to haul 'er down,
disassemble the thing, anc give 'er a good cleaning. I'd suggest
replacing all the hardware (stainless steel's a good idea) and stick a
new connector on yer feedline. Oh yeh - check out yer feedline, too.
If all this doesen't vastly improve yer signal, y'may have a problem
with a trap. If the traps show evidence of cracking and corroding,
they prolly need replacing. It's really futile to try to disassemble
them and clean them up...and I'd say, if y'gotta do that, might's well
buy and install a brand new antenna.
Hope this response is still pertinent...

I have seen that "phantom back windshield wiper" occur in an another Explorer that belonged to someone I know. (Don't recall the year but it must have been a 91 or 92, and I don't know if he still has it). That car had a glass mount. I put an NMO mount in his roof for him and he had no problems afterward.

I run 50/35 watt dual band in my '95 Explorer with no trouble. I have an FT5200 with power and ground run directly to the battery. The antenna is on an NMO mount drilled in the roof. The radio is under the back seat (not attached, it just sits there) with the control head on the console. The radio doesn't bother the car, and the car doesn't bother the radio.

The same radio has been used without trouble in an 82 Isuzu Diesel P'up, a 90 Thunderbird SC, a 92 Escort GT, in addition to my current Exploder.

Regards

I ordered one small accessory through AES (Amateur Electronic Supply).

It took them three days to respond to my order. I didn't receive
the product. I called the office a week later. They told me that
they placed the order and they needed someone to go to the post
office.
Now, they tell me that they don't have any records of my order.
I have received nothing. It's two weeks now.
Beware of AES.

By the way, I purchased a radio through Radio City and I am happy with
their service.

I've dealt almost exclusively with AES for 3 years. I've had good
service and good prices. I would guess that this is an isolated event.
The service from the Wickliff store is super...73

72. Storno Software

Seems like they know how to use it fine, it's
the content you object to. They have every right to
discuss whatever they want within the constraints of part 97
regulations.

> Failed autopatch after failed autopatch,

So what?

> callsigns getting mixed up,

I do that all the time...especially when I'm
mobile. If it offends someone...too bad. It's
no crime and certainly not a significant problem.

>and piss poor operating in general.

Such as? Nothing from your examples above
indicates any poor operating.

>Not to mention all the weird codes that must
>have come from some war movie (roger, out, kick it back, etc.).

In what section of Part 97 can I find the official FCC
codes that MUST be used by hams as opposed to
any/all such others...be they Q codes, 10 codes, or
anything else that has a common basis and understanding.
As long as the two parties involved in the QSO know
what they mean, it's of no importance beyond their
contact. Live and let live...if you like Roger, Over, or whatever,
that's fine with me.

> Even the
>people who I considered hard core operators years back are doing nothing
>but testing their microphones (probably the same ones they had years ago)
>and talking about how strong their signals are, STILL. Any contact not
>containing one or more of the phrases above was just a boring discussion

>about how somebody got started out in ham radio, what type of "rig" they
>have, how "mic shy" they are or were, etc.

Sounds like most QSO's on HF that have gone on for years,
going back to the 50's when I first had access to shortwave
listening.

> Even repeaters linked up
>between different states are the most boring thing to force oneself to
>listen to.

This sounds just like those that claim they are forced to
listen or watch radio/TV shows they can't stand. There's
an easy fix for that...try the on/off switch or the frequency
(channel) changing knob of your receiver. Nobody has ever
been forced to listen to amateur contacts that I've ever been
aware of.

>Nothing but old men talking about their various retirement
>activities. Sad, really. I'd better stick with digital and satellite
>operating.

Seems like the solution is in your hand.

Yeah, no kidding!!! I agree with NR5T, however, Burt, I've said this
A NUMBER of times (and you're more than welcome to check the newsgroup
archives on this), if you hate hams so much, WHY DO YOU EVEN POSESS A
HAM CALLSIGN?????

To make (OR at least TRY TO) make OUR lives as miserable and lonely as
YOURS is???

If THAT is your mission Burt, it's NOT working!!!!

Just my humble opinion!!!

73's for now to NR5T & the rest of the newsgroup!!! :-)

Sometimes the rules are hard to understand. Last time I looked a
novice could run CW, AM, or SSB with CW only on the lower portion of
the band 28.1 to 28.2.

Most AM is now above 28.8 so you need a general for that part of the
band.

You got plenty off replies telling you that you have to be a tech plus to operate on 10. That being said, and assuming you are a tech + don"t wait on the sunspot cycle. There are plenty of good openings now and QSO's are usually better than just getting a sig report for the log.

I know this newsgroup (I am crossposting this to the radio newsgroups, where I am very familiar with...) is not a good place to advertise my "computer," but forgive me.

I must sell my computer:

Pentium 75
Windows 95
24 MB Ram
850 MB HD
270MB External HD
14.4K Modem
4X CD
Color Monitor
keyboard
Mouse
Remote Controller
Microphone
ColorScanner
Games
50 FDs
Internet Ready

The equipments are fully functional.

I am asking all of these for $1299 (CDN) obo (or $999 US obo). You will never find a better deal.

Payment:
A money order or a bank draft must be cleared before shipping / giving. No CODs please.

I am advertising this to local news paper as well. First come, first serve. Please contact me before sending me any cheques.

Thanks for your consideration for buying.

Sincerely,

Masa

That is correct. Novice and Technician Plus amateurs are permitted to
use SSB in the subband 28.3 to 28.5MHz. They are not permitted to use
AM.

Bill Pasternak commented:

> I disagree and I cabn point the flaw in your argument with a few
> names: Jack Babkes, W2GDG is one. The late Arthur M. Gentry,
> W6MEP another. The late Sam Harris W1FZJ yet another.

Bill,

As is my habit, I grossly overgeneralized! You are absolutely correct in mentioning those fellows, and we can add a reasonable sized handful of additional calls such as W8JK, WA1HQC, and even W1AW who invented rifle silencers, not electronics! Even W6QHS, to name a contemporary example.

All that notwithstanding, the list of bonafide amateur radio _inventors_ would certainly number less than 50. That number (or even twice that number) pales in comparison to the technical contributions of the tinkerers and innovators who, seeing some exotic (for that time) technology said "Aha, I know what practical use I could make of that".

My original point, which I didn't make very well, is that we will not be able to base our "technical worth" to society on our bleeding edge inventiveness, but rather on our proven ability to reduce new and exotic technologies to practical and cost effective applications which can be adopted by other industries. Art Collins and his cohorts didn't invent SSB, but they sure proved it as a practical HF application and revolutionized long distance voice communications for a generation.

AMSAT and their counterparts didn't invent satelites, but they proved the value of low cost LEO technology and a new industry now is springing up based on that amateur "tinkering".

We didn't invent packet switching, but we figured out low cost ways of transplanting it from copper to RF. Many mobile data services can thank us for "proving the concept".

WA4APR and friends didn't invent GPS, but they deduced a cheap way to marry that technology with packet radio to come up with APRS. That tinkering now founds a new capability in use by public service agencies, so the local sheriff need no longer yell "Car 54, where are you?"

In those examples lies the seed we need to nurture for our future contributions to the state of the radio art, and as an added bonus, out of that mass of "tinkerers" will also certainly step a small number

of bonafide "inventors".

>difference does it make?

Just as many folks like to participate in a neighborhood watch program
to help reduce criminal activity within their community, there are
others, hams and non-hams, that, out of a similar sense of duty, "patrol"
the radio spectrum listening for lawbreakers. You have apparently decided
to ignore or run away from lawbreakers but others have consciences that
won't allow our streets and airwaves to degenerate into anarchy.

>Just because you have a Ham license doesn't make you an informant for the
>FCC.

One doesn't need *any* license to assist in preventing illegal activity.

>And it doesn't give you the right to police the entire frequency
>spectrum from 440 Hz to gamma rays.

That's an odd statement. Maybe you'd like to tell us what our rights
are and are not in this regard.

>You got a drivers license? Then go complain that people are driving over
>the speed limit.

You bet. If I see anyone driving recklessly I phone the cops. Not sure
what your point is, though.

Someone left the back door open again...

After a divorce and having to take all my radio gear down to live in
an apartment, I've been on the 'net for the last several years as a
replacement for ham radio. It's a lot less expensive and easier to put
up also. It does take a little getting used to though as no one ever
asks what kind of PC I have or how the weather is :)
Anyway, I'm back in a house now and planning on putting my station
back on the air. Guess that there is something about ham radio that
computers can't replace!

Take care,

Lowell

>CrACKeD@primenet.com

I've seen my share of individuals that meet the stereotype at various hamfests (and computer shows). the point I was trying to make is that *IF* Burt lost his VE status due to his views (and not because he didn't meet the activity requirement) and huge number of postings , I would expect that out of *ANY* organization after a period of time. I've volunteered for the United Way, Boy Scouts, Red Cross etc. For example, *IF* I continually posted in rec.boyscouts.misc that all Boy Scouts were spoiled, fat, dull, gas emitting, underachievers, I would fully *EXPECT* that someone in the organization would inform me that my volunteer services were no longer needed and terminate my volunteer membership. It didn't take K Mart (I believe) more than about 24 hours to drop Fuzzy Zoeller as a paid spokesperson when he made a few stereotypical remarks about Tiger Woods. Burt *may* have lost his VE status because of inactivity , but if that's not the case then Burt is brain dead or EXTREMELY naive to think an organization would keep him on indefinitely as a "volunteer" and have him continually posting his demeaning views of hams and the service/hobby.

DIPLOMA VASCO DA GAMA

REP - Rede dos Emissores Portugueses (CT1REP), with the support of the Comiss&#65533;o Nacional para as Comemora&#65533;&#65533;es dos Descobrimentos, sponsors this Diploma which is to celebrate the Portuguese Discoveries during the XV century and specially the Discovery of the sea route to India by the Portuguese navigator Vasco da Gama.
This will be a permanent Diploma and all SSB and CW HF contacts (on the authorised amateur bands) on the different amateur regions will count, starting on 15th Novembre 1945.
Licensed Radio Amateurs and SWLs world wide are invited to participate.
To qualify for the Diploma participants must have at least 25 points but with contacts with one sation in Portugal Continental"CT" and another in India "VU".
Diplomas can be requested on one of the three different modes - SSB, CW or MIXED, and there will be 5 different classes and 5 different stamps as follows:
Class I 75 points Golden Lantern
Class II 100 points Golden Compass
Class III 125 points Golden Anchor
Class IV 150 points Golden Astrolabe
Class V 200 points Golden Helm Wheel
There is also a "Honour Roll" for those with 250 points or more.The participants of this Honour Roll can request the correspondent Trophy which is a nice filigree miniature of XVI Century Portuguese "Caravela".
Lists of stations awarded with the different classes of the Diploma will be published in Portuguese Ham magazines and bulletins as well as any foreign magazines who wish to publish them.
Logs can be certified either by photostat of QSLs or by a GCR list (General Certification Rule), certified by two different Amateurs or by a certified amateur radio Association. Should any doubt arise QSLs can be requested.
The Diploma will be awarded free of charge to members of REP (Rede dos Emissores Portugueses), and will cost 1000 portuguese escudos for non members residing in Portugal. For Europe the cost will be US$ 8.00 or 12 IRCs and US$ 10.00 or 15 IRCs for the rest of the World.
Certification stamps for each class are sent free of charge, providing a list of the contacts, certified in the same way as the original log is sent together with self addressed stamped envelope (SASE) or a self addressed envelope (SAE) and 2 IRCs.
For the "Honour Roll" trophy the cost will be US$ 30.00 or equivalent for Portugal or Europe and US$ 40.00 for the rest of the World.
All requests to:

Every radio I have I bought through AES via mail (so I don't have to pay sales tax) And the last Yaesu I bought came the NEXT day via UPS even though I didn't pay for next day service! I called every mail order company in the US, and they had the lowest price.

My last order was 1 or 2 years ago, so I hope they haven't gotten worse in the last few months as I hope to use them again.

Dale,
Try it on 2 and 6 meters.... both load up fine. Checked same with a MFJ
analyzer and found swr under 1.7:1
Use it all the time on 2m with 135+ ft of rg213 (sure I lose abt 1/2
the signal but it still worked even with a 2.5w HT into the local
repeaters).
I even push it for the upper part of 160m (1975) and the tuner in my
Knwd 850 handles the swr so it can't be more than 4:1.

I'm in the market for a dualband base station antenna. It will be mounted in an attic space and needs to have an SO-239 connector. I perused the AES catalog and came up with the following models:

Diamond X-200 or X-300
Cushcraft AR-270B
Comet GP-6 or GP-3

I'd appreciate any and all comments on the performance of these models. Thanks in advance!

Actually after IBM's "STELLAR" performance at the past Olympic Games
OS/2 has been determined to stand for Olympic Statistics 2.

Where can we get a list of Radio Shack's franchise ("Dealer") stores?
This would be an invaluable resource for those of us who occasionally need
to purchase something from Radio Shack but dread having to deal with Sammy
Salesdroid and his foolishness.

>My favorites are that the 5w handheld CB's
>will work for 5 miles and that the 100mw 49Mhz headsets can be used
>car-to-car for up to 1/2 a mile. And then there's the grandaddy of them
all,
>that you can get up to 50 miles, everyday, with a mobile CB and out "best

>magnet mount antenna"

I was once at Radio Shack when a construction foreman came in and wanted
to purchase some radios to communicate with his work crew. What do you
suppose Sammy recommended? CB? Nope. GMRS? Nope. Interant Business
Band? Nope. How about HTX-202s!!!! When the foreman inquired as to why
he should buy HTX-202s at $199 a piece instead of the $99 CB walkie-talkie
he was holding, our droid friend responded with "Well, uh, these have a
lot more channels and more power than the regular CBs." No mention was
ever made about licensing requirements, of course.

True story. I saw and heard it with my own eyes and ears.

117. 10 meters and Novice/Tech+

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-02 00:00:00 UTC
From: Joel <amateur@radio.net>
Message-ID: <33BA7CA3.5ADC@radio.net>
Source record: 194508

I think the ENTIRE 10 mtr band,top to bottom,should be open to
Novice and Tech+ ops.
Reason...hardly anyone uses 28.0-28.1 or 28.5 up!!
Example...during field day the phone portion of 28.3-28.5 was
crowded almost to the un-usable point.28.5 and up was quiet,except for
2-3 ops.
In my experience and opinion,9 of ten ops on 10 mtr are either there
because they are Tech+ or Novice OR they are there to talk to Tech+ or
Novice ops!!!Either way,they are all bound to the Tech+/Novice segment
of the band.
Any opinions,pro or con are welcome.Post here for all to see.
Thanks
Joel(Advanced Class OP-FWIW)

My 2 cents.. Stay away from the CushCRAP! Both the Diamond and the Comet
are good. I use a Diamond X-500 and X-200 for packet, both work very well!
I have the X-500 at 60 feet for packet on 2m and 70cm. and the X-200 at 30
feet for packet on 70cm and voice on 2m.
The X-500 has been up for 4 years with Belden 9913 cable, SWR is the same
as the day it went up. X-200 3 years, same thing. Both are on the air 24/7
in BBS operation.
The Comet looks like a copy of the Diamond so I would expect the same from
one of them.

Maybe it does to you - but why should it? Are my postings worth more
if I include my callsign than if I omit it? Why?

I'd rather judge an article by what it has to say, than whether the
author has a particular piece of paper or not.

Nothing specific to OS/2, but several others seen at:

http://simtel.coast.net/simtel/msdos/hamradio.html

I've tried several; they work fine as DOS and/or Win 3.1 programs under
OS/2.

I am sincerely thankful for the wonderful Field Day experiences.

To whomever it was who put up with a 7-year-old trying to
learn the callsign "Whiskey Three Lima Mike," and actually
give a report of "Two Alpha Maryland."

Boy, was he ever nervous, and WOW, did he scream when he
finished that contact!

To whomever it was who dialled up superb weather and those
REALLY excellent 20m band conditions.

To all of the folks who, like the 20 of us at the Laurel, MD
ARC's Field Day site, took the time to go out and show
the world and ourselves what ham radio is really about.

It ain't about what goes on on the Internet, folks. It's
about operating, and public service, and challenging
yourself to be as good as you can be.

Thank you all.

summarized from 47CFR97.305:

Freq Range Modes Notes [47CFR97.307(f)]
28.0-28.3 RTTY,data (4)
28.3-28.5 phone,image (1),(2),(10)

47CFR97.307(f) provide the following:

(1) No angle-modulated emission may have a modulation index greater
than 1 at the highest modulation frequency.
(2) No non-phone emission shall exceed the bandwidth of a
communications quality phone emission of the same modulation type. The
total bandwidth of an independent sideband emission (having B as the
first symbol), or a multiplexed image and phone emission, shall not
exceed that of a communications quality A3E emission.
(4) Only a RTTY or data emission using a specified digital code
listed in Sec. 97.309(a) of this part may be transmitted. The symbol
rate must not exceed 1200 bauds, or for frequency-shift keying, the
frequency shift between mark and space must not exceed 1 kHz.
(10) A station having a control operator holding a Novice or
Technician Class operator license may only transmit a CW emission using
the international Morse code or phone emissions J3E and R3E.

A full wave loop in the horizontal plane or a dipole in the vertical plane is omnidirectional. If you want to talk local at all try to match the polarity of the other signals. If there is any way you can get a small 3 element beam up do it! 10 watts with a small beam is much better than 100 watts with a single element. Enjoy. Six is a great band and I've never heard it when it's been really good. Tom KD1YQ.

I bought a Rat Shack 102" steel whip and cut to 10 meters. If you
don't mind the height it's about the best antenna for $15 for 10 meters.
You may have to play with the length of the coax to get the best
SWR. Tom

: I'm interested in low cost, simple 2-way communication for my family.

: My question is, should I jump on the new FRS (Family Radio Service) band
: wagon or should I spend the extra money for GMRS equipment/license?

: The main use will be between family members over short distances (1-2
: miles). I realize that GMRS gives me the option of using repeaters.
: Small size is also important.

FRS range averages about .75 miles in my own experieces, as well as that
of others.

The units are really small, dfdepending on the model. Some can fit in a
shirt pocket. CTCSS tones will allow to prevent interference from other
users. Reportedly Kenwood has a unit that also utilizes digital
encryption to really make comms private.

Dear Internet user,

If you are paying for your Internet services then
you have not heard about 1stFamily. We have
a marketing method that guarantees you will not
have to pay one dollar to access the Internet.

* You will never again have a busy signal !

* You will always have the fastest access you have ever seen !

* Residual income for the rest of your life !

* and much much more.

This opportunity is for YOU to take advantage of !

Do you wish to continue the rest of your life paying
$19.95/month to access the Internet when you can
access it for free with speed and reliability that exceeds
the other competitors ??? We did not think so. That
is why our company is the best and fastest growing
of it's kind and will soon compete with AT&T and MCI
and all the big companies in providing Internet Service.

For complete information please mailto:sameer@1stfamily.com
and type "More Info" in the subject box.

You will receive our webpage address where you can get enrolled in
seconds !!

Sameer (Sponsor ID# DUA2692)

The requirements for CW today is irrelevant, I would call it a hobby mode.
The reasons etc have already been put out numerous times in the debate.

Paul.

150. Re: GMRS or FRS?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-02 00:00:00 UTC
From: aa7ujjohn@aol.com
Message-ID: <19970702005601.UAA02639@ladder02.news.aol.com>
Source record: 194572

I am debating the same issue myself. Here are my thoughts so far.

FRS is lower quality audio. 12.5khz deviation 25Khz on GMRS (3.1kaudio bandwidth)

FRS limited to >1 watt handhelds 2 miles unlikely.
GMRS 5 watts for base or repeater/ 50 wattt mobile. with external antennas allowed.

The pricing on FRS is certainly attractive but you can find used commercial radios which can be programmed or crystalled to GMRS cheap.

I don't know of anyone with real life experience wih FRS devices yet but many GMRS users are very happy with this service for family use. And there are people monitoring 462/7..675 in case of an emergency!

Greetings,

I have recently made available the N9IPV Spectrum Analyzer for the
Yaesu FT757 style rigs.
I would like to extend the same software for owners of the following
rigs...
Yaesu FT 747 style
Yaesu FT 767 style
Yaesu 980 style

Since I do not own any of the above rigs, I cannot do this unless an
owner of each of the following rigs will come forward and send me a
copy of the page(s) in your manual that describe the communication
protocol and a diagram of the front panel.

In return, I will give you a copy of the completed software.

E-Mail me for my address please. dthimm@newnorth.net

If you would like to see the features included in the FT757 version,
please visit my website and download a copy of the software at:

http://www.newnorth.net/~dthimm

Thank You and 73
Dan T.

To Burt Fisher:

Hello Burt. I'm not a ham but have been following this thread
with some interest, as I have been a SWL since 68 and a CB
/ GMRS op since '74. Have listened to some HF ham stuff and
I understand that arrl is not the only game in town. Unless I'm
wrong is there not an exam group in Texas and another in Belmede
Lakes, Me who does testing?

As to your ongoing comments about H.R. I concur with much of you
observations, as I enjoy a unique perspective of being involved in E.E.
thus knowing the technology, but also not holding a ham licence, so
thus I can provide an "unbiased" observation(s) both live and during SWL
activities of the ham RF spectrum.(s)

Been to a few hamfests and a local ham club meeting. Their sort of like
going to a Unification Church or Scientology meeting. All these curious
people speaking to me about the ham radio hobby like it's something
akin to the Second Coming. One particular guy I chance'd meet at a ham fest
in Maryland was so glub-damm pushy about ham radio being the best thing since sliced
bread that he could've also been right at home handing out flowers and/or
Tracts in BWI Airport for Lyndon Larouche or Revrend Moon. Was trying to
speak with other folks and this short geek with 3 radios on his belt and his
callsign on a stupid hat he was wearing wouldn't shut up or let others get a
word in edgewise. (his yappin reminded me of a pekeneise puppy on
speed...Yip..Yip..Yip...Yip..!!) Why does ham radio seem to be a natural
magnet for screw-balls Burt? An honest question as I'm dumbfounded here.

Oh well, gettin off the topic. One final comment, you mentioned your problems
with arrl management and your comments about the R. Palm and L. Hurder
"story". It is my understanding, from ham sources which seem somewhat
reliable, that the outcome between the 2 personages you mentioned was a
result of a 20 meter SSB issue which has been allegedly going on for a number of
Years. I was told that this situation was becomming an "official embarasment" to the
arrl and ham radio, and someone had to take the "fall" to save face. For whatever
it's worth. Truth or bs, who knows? I've SWL'd up there myself and will concur that
it is pretty bad, worse than some parts of CB radio in comparason.

Keep up the postings Burt, there are many more people reading them (and the
replies) with much amusement.

Lets try this again, a Novice can operate in the 28.1 to 28.5 range with
28.1-28.3 reserved for CW and with in that 28.2-28.3 for digital and
28.3-28.5 for SSB. Thats straight for the ARRL.. Or whom ever you look to..

166. Re: VK2WI News, 22nd June 1997 - Morse requirement survey

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-02 00:00:00 UTC
From: Edward Weyher <adpdude@starnetinc.com>
Message-ID: <01bc868f$f013b540$50b4e3cf@adpdude.com>
Source record: 194588

My insights on the code requirement are, CW will only usefull if a major catostrophic event ocurred that caused a severe atmospheric disturbance. High speed coping of code as a requirement is a relic of a very glorious and glamours past of the Golden days of ham radio. I still think we should keep a entry level code requirement of 5 wpm. If you want your Novice or Tech+ then learn the code and 5wpm but for General, Amateur and Extra, increase the number of questions and complexity of the written test. Add more therory and operating and courteousy.

In all honesty the code requirement is fast becoming a redundant piece that is going to hurt more then help the Amateur community..

I've dealt with AES for over 13 years and have never had a problem. I recently made a large purchase from them the Thursday before Field Day weekend and was told I would receive it UPS on Monday or Tuesday at the latest. I got it on Friday in time to play with it during Field Day! By the way, AES as never sent me anything by the US mail--alway UPS. They were $300.00 less than HRO for the same items. AES--keep up the good work, telephone help, prompt shipping and competative pricing! 73 de KA8SWD.

1997 PNW DX Convention

Update:

The 1997 PNW DX Convention will be held July 25,26 & 27th at the Richmond Inn, Richmond B.C.

Friday evening check in & hospitality suite with bar by BC DX Club & Fraser
Valley DX Club.

Saturday seminar speakers so far include VE7BS and VE7RG.

Saturday evening banquet speaker is Dr.Gilbert Robinson W5NYT. "Robbie" was
an administrative/scientific director with NASA for many years. He holds numerous patents and and will link ham radio and space exploration.

The hospitality suite opens Saturday night after the banquet.

The breakfast program Sunday morning includes Mike Mraz N6MZ, a Heard Island
team member. Mike will either show the Heard Island Video, or video outakes
& his personal slides, depending on audience request. W7KCN has a DX quiz
game to present, and the prize drawings.

So if you are contemplating a visit to B.C., why not try and arrange your trip to join us at this years convention.

Bill Pasternak commented:

> I disagree and I cabn point the flaw in your argument with a few
> names: Jack Babkes, W2GDG is one. The late Arthur M. Gentry,
> W6MEP another. The late Sam Harris W1FZJ yet another.

Bill,

As is my habit, I grossly overgeneralized! You are absolutely correct in mentioning those fellows, and we can add a reasonable sized handful of additional calls such as W8JK, WA1HQC, and even W1AW who invented rifle silencers, not electronics! Even W6QHS, to name a contemporary example.

All that notwithstanding, the list of bonafide amateur radio _inventors_ would certainly number less than 50. That number (or even twice that number) pales in comparison to the technical contributions of the tinkerers and innovators who, seeing some exotic (for that time) technology said "Aha, I know what practical use I could make of that".

My original point, which I didn't make very well, is that we will not be able to base our "technical worth" to society on our bleeding edge inventiveness, but rather on our proven ability to reduce new and exotic technologies to practical and cost effective applications which can be adopted by other industries. Art Collins and his cohorts didn't invent SSB, but they sure proved it as a practical HF application and revolutionized long distance voice communications for a generation.

AMSAT and their counterparts didn't invent satelites, but they proved the value of low cost LEO technology and a new industry now is springing up based on that amateur "tinkering".

We didn't invent packet switching, but we figured out low cost ways of transplanting it from copper to RF. Many mobile data services can thank us for "proving the concept".

WA4APR and friends didn't invent GPS, but they deduced a cheap way to marry that technology with packet radio to come up with APRS. That tinkering now founds a new capability in use by public service agencies, so the local sheriff need no longer yell "Car 54, where are you?"

In those examples lies the seed we need to nurture for our future contributions to the state of the radio art, and as an added bonus, out of that mass of "tinkerers" will also certainly step a small number

of bonafide "inventors".

173. NAQP RTTY Rules

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-03 00:00:00 UTC
From: hansbrakob@juno.COM
Message-ID: <19970703.092447.9606.2.HansBrakob@juno.com>
Source record: 194346

-+- North American QSO Party RTTY Mode (NAQP) -+-
Third full weekend in July
Sponsored by National Contest Journal (NCJ)
(July 19-20, 1997)

1) Eligibility: Any licensed radio amateur may enter.

2) Object: To work as many North American stations (and/or other stations if you are in North America) as possible during the contest

period.

3) Entry Classification: Single Operator and Multioperator, Two Transmitter. Multioperator stations shall keep a separate log for each transmitter. Multioperator stations must have at least 10 minutes between band changes. Use of helpers or spotting nets by single operator entries is not permitted. Single operator entrants may only have one transmitted signal at a time. Output power must be

limited to 150 watts for eligible entries.

4) Contest periods:

RTTY: 1800 UTC July 19th to 0600 UTC July 20th, 1997

Multioperator stations may operate for the entire 12 hour period. Single operator stations may operate 10 out of 12 hours. Off times must be at least 30 minutes in length and must be clearly marked in the log.

5) Mode: RTTY only in RTTY parties.

6) Bands: 80, 40, 20, 15 and 10 meters only. You may work a station once per band. Suggested frequencies are: 3585, 7085, 14085, 21085 and 28.085 on RTTY.. Try 10m at 1900Z and 2000Z 15m at 1930Z and 2030Z etc.

7) Exchange: Operator name and station location (state, province or country).

8) Valid Contact: A valid contact consists of a complete, correctly

copied and legibly logged two-way exchange between a North American station and another station. Proper logging requires including the time of each contact. Regardless of the number of licensed call signs issued to a given operator, one and only one call sign shall be utilized during the contest by that operator.

9) North American Station: Defined by the rules of the CQWW DX Contests with the addition of KH6.

10) Scoring: Multiply total valid contacts by the sum of the number of multipliers worked on each band. Multipliers are states (including KH6 and KL7), Canadian Provinces (Canadian multipliers are: British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Quebec, New Brunswick, Nova Scotia, PEI, Labrador, Yukon, and NWT) and other North American countries (do not count USA, Canada, KH6, or KL7 as countries). Non-North American countries do not count as multipliers, but may be worked for QSO credit.

11) Reporting: Send North American QSO Party RTTY logs to: Ron Stailey K5DJ, 504 Dove Haven Dr., Round Rock, Tx 78664-5926.. Entries must be postmarked not later than 30 days after the party to

be eligible for trophies and awards. An proper entry consists of (1)

a summary sheet showing the number of valid contacts and multipliers

by band, total contacts and multipliers, total score, team name (if any), power output, name, call sign, and address of the operator, station call sign and station location; (2) a complete legible log of all contacts (including dupes marked as such) with indication of multipliers claimed; (3) a separate check sheet for each band; and (4) a list of all claimed multipliers worked on each band.
Logs, summary sheets and check sheets may be home made or patterned after those published periodically in the NCJ. Logs may be submitted

on disk in the form of files generated (.BIN & .SUM) by WF1B program

or MS-DOS ASCII files consisting of all information in (1)-(4) above

if generated from a program other than RTTY by WF1B. All entries should include a written, signed statement of "Fair and Ethical Operation".

12) Team Competition: Team competition is limited to a maximum of 5 single operator stations as a single entry unit. Groups having more

than 5 members may submit more than one team entry. PRE
REGISTRATION
REQUIREMENT: To qualify as a team entry, the name, call sign of each
operator, and call sign of the station operated should the operator be a guest at a station other than his own (e.g. K1NG op by WF1B) must be registered with K5DJ. The team registration information must be in written, telegraphic or e-mail (k5dj@easy.com) form and must be received before the start of the NAQP. There are neither distance nor meeting requirements for a team entry. The only requirement is pre-registration of the team.

13) Penalties and Disqualification's: For each unmarked duplicate QSO, you lose that contact plus an additional three contacts; for each QSO for which you are not in the other stations log, you lose

that QSO plus an additional one contact; and for each QSO for which the log data is incorrectly copied in any respect, you lose that contact. Entries with score reductions greater than 5% will be disqualified. Any entry may be disqualified for illegibility, illegal or non-ethical operation. Such qualification is at the discretion of the NCJ Contest Review Committee.

14) Awards: A plaques will be awarded for the high score in each of the following categories:

- Single operator RTTY--Plaque Sponsor: Glenn Vinson, W6OTC
- Multioperator RTTY----Plaque Sponsor: RTTY by WF1B

Certificates of merit will be awarded to the highest scoring entrant from each State, Province, and North American Country. With at least 200 QSO's.

COMMENTS: We now have an RTTY NAQP. It's a short 12 hour sprint - a non-DX blast for low power stations. (150W max.) The object is to work as many North American stations as you can, so that makes it a rate-contest first, and let mults fall where they may. There are band mults, so there'll be lots of mults to keep track of. This kind

of contest will help you to smoothe out the rough edges of your operating skills by keeping you alert and quick. If your choice mode

is CQing, you'll get into a routine of "one-key-itus" when using logging software, especially when using "RTTY by WF1B" and callers use "DE" in front of their calls. If you want to increase your skills
with "Search and Pounce", its a matter of how quickly you find CQs and how short to make your call and exchange. Try not to break the standard exchange, such as sending your call and the exchange before

contact has been established. It disrupts the rhythm of the routine and thus slows the rate of the CQer. If the station you're working is
loud, send exchange just once. Hint: when assigning "F-key" messages,
set the exchange for a one-time shot. If there is lots of QRM, hit the F-key twice but be sure you set a proper break between the double
(like <CR> or space).

I remind the group that there is a chain letter circulating, purportedly from a dying child soliciting letters to the American Cancer Society, which is a hoax. See the American Cancer Society web site for details of the hoax.

It asks no money, so is not truly very wicked, but on the other hand we probably don't need it in our lives, and ACS does not need their mailbox jammed with a lot of copies.

SB PROP ARL ARLP027
ARLP027 Propagation de K7VVV

Solar activity is still very low. There was some disturbance from coronal mass ejections centered around June 27, and the planetary K index reached up to 4 and 5. Within a few days we were seeing K indices of zero again, signifying stable conditions.

Over the next month no notable solar activity is expected. Solar flux is expected to hang around the low seventies again. Recurring activity could appear July 6 to 8 in the form of coronal mass ejections, causing geomagnetic instability and a rise in the K and A indices.

A Reuters wire service story appeared last week quoting a London weather forecaster who observes solar activity. The article talked about dangers to satellite and communication systems from big solar flares, and quoted the forecaster saying that there would be a big disturbance between June 28 and July 3. So far nothing has appeared, and the news item stated that the forecaster does not divulge his methods.

In ARLP026, I reported that the new version of the WA4TTK solar activity graphing program is now available. There has been a big response, but if you don't have a copy yet, get it from Scott's web site at http://edge.net/~scraig/.

Sunspot Numbers for June 26 through July 2 were 23, 19, 26, 24, 0, 0 and 12 with a mean of 14.9. 10.7 cm flux was 71.8, 71.7, 71.2, 70.2, 69.8, 70 and 70.1, with a mean of 70.7, and estimated planetary A indices were 5, 16, 9, 11, 5, 4, and 4, with a mean of 7.7.

The flashing indicator means that the VCO is unlocked. There can be
a number of causes for this, basically anything in the PLL loop could
cause it. Most commonly it is an indication that the VCO is trying to operate
outside the frequency range for which it is aligned. So a simple alignment
may solve the problem. But it sounds more like you have some other
component in the circuit that has gone intermittant on you. I'd check
for cold solder joints or a cracked trace first.

ARRL Bulletin 38 ARLB038
From ARRL Headquarters
Newington CT July 3, 1997
To all radio amateurs

SB QST ARL ARLB038
ARLB038 Vanity Gate 3 Part 2

Under Gate 3, you must hold an unexpired Advanced class operator/primary station license to request a vanity call sign for your primary station. To request a vanity call sign for a club station under Gate 3, you must also hold an unexpired club station license grant listing you as the license trustee. Applicants should refer to the licensee database to verify that a requested call sign is not already assigned. A call sign is normally assignable two years following license expiration, surrender, revocation, set aside, cancellation, void ab initio, or death of the grantee.

Using Form 610V or its on-line electronic equivalent, applicants may request up to 25 call signs in the order of preference. The first assignable call sign on the list will be the one the FCC assigns. Remember: When requesting a call sign under Gate 3 for your primary or club station, the call sign must have been unassigned for at least two years. As an Advanced class operator, you may request a call sign only from groups B, C or D.

Any call sign requested must be one designated for the region of your mailing address, as follows:

One of the contiguous 48 states: Regions 1 to 10.
Alaska: Regions 1 to 11.
American Samoa: Regions 1 to 10, or Region 13 having numeral 8.
Commonwealth of Northern Mariana Islands: Regions 1 to 10, or Region 13 having numeral 0.
Guam: Regions 1 to 10, or Region 13 having numeral 2.
Hawaii: Regions 1 to 10, or Region 13 having numeral 6 or 7.
Puerto Rico: Regions 1 to 10, or Region 12 having numeral 3 or 4.
Virgin Islands: Regions 1 to 10, or Region 12 having numeral 2.

For explanations of Groups B, C and D and the geographic regions, see Fact Sheet PR5000 Number 206S, Amateur Station Sequential Call Sign System (or see The ARRL Letter Electronic Update, August 16, 1996, available on the ARRLWeb at http://www.arrl.org/). For more information on the vanity call sign program, see Fact Sheet PR5000 Number 206V Amateur Station Vanity Call Sign System.

If you file before the opening date or do not qualify under the Gate 3 eligibility standards, your application will be dismissed. General, Technician Plus, Technician, and Novice class operators will become eligible to request vanity call signs under Gate 4. The FCC has not indicated when it plans to open Gate 4.

For further information, contact the Consumer Assistance Branch at 800-322-1117 or call the FCC's National Call Center, 888-225-5322 (CALL FCC).

ARLB037 Vanity Gate 3 Part 1

ZCZC AG37
QST de W1AW
ARRL Bulletin 37 ARLB037
From ARRL Headquarters
Newington CT July 3, 1997
To all radio amateurs

SB QST ARL ARLB037
ARLB037 Vanity Gate 3 Part 1

The long wait is over for Advanced class amateurs. The FCC has just announced that it will open filing Gate 3 of the Vanity Call Sign Program on Wednesday, August 6, 1997. Advanced class hams will be able to apply for a call sign appropriate to their license class on or after that date. Applicants must file either a paper FCC Form 610V or electronically via the FCC's Web site at http://www.fcc.gov/wtb/amradsrv.html and pay the current 30 dollar fee.

The August 6 deadline squeaks under the implementation of the FCC's new fiscal year 1997 fee schedule, adopted June 16. Under the FY 97 schedule, which becomes effective September 16, 1997, the vanity application fee will jump to 50 dollars a year. The ARRL had asked the FCC to suspend implementation of the higher FY 1997 fee until after the remaining gates have been opened and applicants had an opportunity to file under the old schedule. The FCC's response, buried within the Report and Order adopting the higher fees, suggests the FCC could also be planning to open Gate 4 fairly soon. ''We expect our remaining vanity call sign 'gates' to open before the effective date of our FY 1997 regulatory fee payment requirement,'' the FCC said in turning down the request for a delay. But, the FCC added that applicants ''are expected to pay the fee applicable at the time they file.''

The bottom line is that hams applying for a vanity call sign on or after September 15 must pay the 50 dollar fee.

Payment of fees may be made by check (payable to FCC), bank draft, money order or credit card. If paying by credit card, you must also complete and submit FCC Form 159 with your FCC Form 610V. Do not send cash. Send your application package to: Federal Communications Commission, Amateur Vanity Call Sign Request, Box 358924,

Pittsburgh, PA 15251-5924.

If you file a paper application, remember that legibility is critical. If your application is not able to be deciphered easily by FCC personnel, you could experience a delay in processing, lose the opportunity to obtain a requested call sign or even obtain a call sign different from what you want. Be sure to include your current Amateur Radio call sign on your vanity application.

Hello Mike (and all!),
Well, I am doing fine. I had to give up the DCARA Swapnet last December after running it for 6+ years due to increased business obligations that limited the time necessary to maintain the Swapnet on a weekly basis.

The DCARA Swapnet resumed a few months ago and is now run by Steve, WA3RVT and Cheryl, N3VKB. I believe that the Swapnet is now QRT for the summer and will resume the first week in September, 1997. Check the DCARA Monday eve net every Monday at 7:00PM on 147.360(+) for updates.

Also, check my page at http://www.voicenet.com/~ka3vsp for info and a link to the DCARA web page.

Thanks for the inquiry,
Brian Pasternak
ka3vsp@voicenet.com

CRAP!I have been on 10 mtrs since '91' and it has always been like
this!Besides,what has Extra class to do with it?You only need a General
to use the entirety of 10 mtrs and IT IS NOT BEING USED!!!
>
> > In my experience and opinion,9 of ten ops on 10 mtr are either there

> the sun-spot cycle is at its best, you'll hear activity all over 10m.
I believe you mis-understood what I was saying.They arent 'bound' to
the Novice portion,but they are there because NO-ONE is on the other
segments of 10,except maybe the FM portion and I have worked No-coders
10:1 on the FM rptrs,them operating via remote base.
I still say the entire 10 mtr band should be open to ALL holders of
ANY class license.You never said whether you agree or not.

193. Repeater Liability Insurance

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-03 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ccnet.com>
Message-ID: <33BC3198.6DC0@ccnet.com>

Has anyone here (individual, club, etc) had to obtain liabilty insurance for a repeater? Sometimes, as condition of tenancy at a commercial site, landlords will require insurance - which is not entirely unreasonable. But what if you were told that in order to renew your lease you had to provide a $1 million policy. Who would you go to for information?

196. Schematics For Icom BC-80 Battery Charger?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-03 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <33be3b0f.607239063@nntp.atlanta.com>
Source record: 194411

I'm looking for the schematics for the Icom BC-80 battery
charger, if anyone has taken thiers apart. I tried pretty hard to get
the halves separated on mone without breaking it, to no avail. In
lieu of schematics, if anyone has determined what the various switch
combinations represent, I would be interested in that.

Thanks much.

A similar thing happened to me a year ago. I ordered a Yaesu mic from the Main store. I gave the salesman my credit card # etc. I told him it was a dicontinued mic. He said he had two in stock so it was no problem and that I should have the mic within a week. Well 14 days pass by and I called to see what happened. There was NO RECORD of my order. The salesman who I spoke with said that I had to pay UPFRONT since there was no mic in stock. HEY....How about calling me to say that the inventory on their computer was in error and that is I still wanted the mic I have to prepay so they can get it from Alinco. I NEVER got any notice. The salesman who I originally spoke with said he couldn't recall who I was or find any trace of my order even though I gave them my credit card info etc. I got the mic from HRO in SALEM,NH.
I thought this was an isolated incident but by original posting I see it isn't.

Help - I just fired up my HTX-100 after several years in the box to use with a transverter for 50 MHz... But HEY! It will not transmit. The "TX" on the LCD display will come on, the CW side tone will sound, but the xcvr will not switch into transmit mode. In fact, the TX wil come on but it still receives.

Has anyone ever seen this before? Any ideas? Who works on these darn things?

Thanks in advance,
David W5TN

>self-resonance) of a multi-layer coil, based on the geometry? Thanks.
>
> --- mkj

Hi MKJ.

The actual calculation is VERY complex, and is best solved by direct
measurement.

I or others can probably describe several ways to measure the effect
you need to know.

I probably still have a thirty or forty page paper written by WP
Czerwinski, and excerpts of his paper were printed in Electronics,
August 26, 1960. I'm sure you could obtain a copy from a technical
library.

Every modeling program I've tried produces VERY inflated inductor Q's,
and incorrect self-resonant frequencies. I'm not sure they work at all
with multilayer inductors.

Many VERY subtle effects modify the effective layer to layer
capacitance, so I think you'll be unhappy with the results of any
estimate or modelling program unless you are willing to accept more
than two to one error. Even the calculations of single layer solenoids
are almost impossible to make, and are not modeled accurately (at
least with all the programs I've seen).

So as much as people may want to help you, there may be no good answer
except cut and try.

audio quality on FRS seems not to be limited so much by the restrictions
on deviation and bandwidth.

>FRS limited to >1 watt handhelds 2 miles unlikely.
>GMRS 5 watts for base or repeater/ 50 wattt mobile. with external antennas
>allowed.

Actually FRS is limited to .5 watt.

>The pricing on FRS is certainly attractive but you can find used
>commercial radios which can be programmed or crystalled to GMRS cheap.

>I don't know of anyone with real life experience wih FRS devices yet but
>many GMRS users are very happy with this service for family use. And
>there are people monitoring 462/7..675 in case of an emergency!

FRS is good for its intended use. I generally average .75 miles range on
my units. Not good for long range but works fine for what I use it for.

229. Replacing the Dial Light on an HR-2510

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-03 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19970703021600.WAA24117@ladder01.news.aol.com>
Source record: 194450

After 8 years of constant use, I've finally had something go out on my beloved first-generation HR-2510. The dial light has burned out. No biggie, right? Where can I get a replacement, how much will it cost, and how difficult is it to replace?

-Drew in Sunny Central Florida-

Running 160W on 2m, I usually get the back window wiper operating in
my '91, I wouldn't bet on seeing the windows go, they have huge
conventional
switches to operate them.. Nothing remotely solid state about it.

KB2VTL, but the state of affairs gives me little reason to be on the air
much,
so it is of little practical use. You would have saved time if you simply
posted it.

I passed every written part, all the way up, but never took the code test
as
other things took up too much time and it got put on the back burner. I
will
probably not ever upgrade, the way the bands look lately, though.

Here is another one.

Back when i'm trying to set up a Bicycle amateur radio station. I'm looking for a ac to dc adaptor to charge a 12 volt gell cell battery. While i'm calculating and looking for a adaptor that has a 1/10 amperage of my gel cell battery. This Rat Shack RAT come by and plainly suggest to me to use a 18 or 24 volts adaptor.
When i look at him and said are you NUTS !! He calmly procced to said " You Know You Need More Voltage To pressure the charge into the battery ""
I gave him one nasty look and said "You really don't know squat "

Kind of make me feel bad ,especially the sales droid is an old gentlemen in his early 50 .

I will be mobile Thursday thru Monday Enroute to and from Mississippi
Gulf Coast and Melbourne Florida for a family visit.
I will be traveling in the mornings and will have 6m and 2m all mode
running for both ten hour trips.
I leave this morning around 5am from EM50.
Look forward to all the company on the SSB calls.
50.125 144.200 and any repeaters I have time to program along the
way.
BTW-Gulf Coast tropo opening seems to be strong this AM so this may be
a good chance for some easy grids.

>The requirements for CW today is irrelevant, I would call it a hobby >mode.

A similar comment could be made about just about all amateur radio activity, not just CW operating. Calling ourselves 'amateur communicators' or some other name would make no difference!

Very many activities that were necessities in years gone by are now enjoyed as 'hobby modes'. Archery, horse riding, sailing, making clothes are just a few examples. Amateur radio (not just Morse operation) could probably be added to this list.

Our difficulty is getting real and coming down to earth (all those claims about amateurs helping the community are undoubtedly true, but a wee bit overblown, particularly when we are use them to justify our continuing access to the SHF bands, which have probably never carried an SOS/mayday call in all the years we've been able to use them!) while being able to provide sound reasons to the authorities for our continued access to the spectrum.

My www site goes on at much greater length about this topic.

The analysis comes into play prior to construction. The product will
differ from the model, so differences are measured, then modifications
are made. Thus, as Jim stated, "build it, measure it, modify it!"

>How sad for amateur radio.

That's why we're referred to as "amateurs." The "professional radio service"
is next door.

Stan King W4KR ex-W8POZ SCAM ARTIST

I need any information on the present whereabouts of Stan King, callsign W4KR (ex-W8POZ). He left many hams in southeastern Michigan holding the bag for many thousands of dollars in an elaborate scam.

In spite of a court order (relating to these frauds) to keep his current address on file with the court in Ann Arbor, Michigan, he skipped the state in late 1996. His current W4KR license address shows a "dead-end" mail drop in Florida, and his driver's license was changed to Texas with a false address.

If you know where this crook is, please email me with the information. Any tip, no matter how small, is helpful.

73, and thank you very much.

I understand as far as being a VEC the publishing arm of an organization
is not supposed to have a connection with the examining ARM.
(to avoid conflicts).

But I understand Debbie Jahnke(the publishing arm) and Bart Jahnke
(the examining arm) maybe be closer than most hams and at times
they actually touch rather personally.

So I ask you and the ARRL is this too intertwined?

Burt

The National Loser Test

If you answer yes to ANY of the following questions you are a loser:

1. You hit your spouse.

2. You are a child molester and think you ought not kill yourself.

3. You ever drove drunk.

4. You are a typical ham radio operator.

5. You take illegal drugs.

6. You cheated on your spouse more than once.

7. You are in jail for a criminal conviction.

8. You are a saleman at a small radio station.

9. You think audio processing is important to a radio station
(over progam content).

If you answer YES to three of the following you are a loser:

1. You are divorced and think you are not at all at fault.

2. You are fat and think it is not your fault.

3. You think alcoholism is a disease.

4. You are on welfare

5. You hit your children.

6. You are "living with somebody."

7. You use profanity frequently.

8. You own a gun "for protection" but do not live in a dangerous area.

9. You subscribe to Penthouse et.al.

10. You are proud of being a homosexual.

11. You are a member of N.O.W.

12. You smoke.

13. You dye your hair

14. You do not defend those that you agree with for fear you will not be liked.

15. You prefer doing anything over being with someone you truly love deeply (i.e. soulmate).

16. You are two faced.

15. Did not graduate high school

3 yes= smalltime loser
4-6 yes= moderate loser
7-10 yes think about Dr. Kevorkian
Over 10 yes= act on Dr. Kevorkian

Please feel free to add your own.

Here is what others have to say about ham radio-K1OIK:

From: Warren T Reese <RADIONS@AOL.COM>
Subject: Re: Good ham, bad ham.

Dear List

I kind of hate to say this, but I must express my belief that Ham Radio is used for very little these days. It has great potential!

I believe the main purpose it surves is providing entertainment for its operators & helping to keep the balance of trade with Japan unfavorable for
the United States.

Its true that examples can be cited where Amateur Radio is of great publice
service, but these are very few & very far between.

..Sorry,
Tracy WB6TMY

I'm absolutely with Roy on this one:

DESIGN IT FIRST and then "build it, measure it, modify it"

... which is actually what the original questioner wanted to do.

>>How sad for amateur radio.
>
>That's why we're referred to as "amateurs." The "professional radio service"
>is next door.

We're referred to as "amateurs" for a variety of reasons, including:

1. We don't get paid.

2. We don't have access to professional equipment.

3. Most of us have less time than professionals, because our full-time
job is something else.

4. Because of #1, #2 and #3, we sometimes have to cut corners.

5. We can't be bothered to think and learn how to do it right.

I can live with #1, #2, #3 and even #4 - but if "amateur radio" had to
mean #5 as well, I'd be outa here.

Fortunately there are people like Roy around to remind us that it
doesn't have to be that way.

the foreman (how'd you know his title?) and the salesman?

Oh, excuse me. I didn't ASK him his title. A big, burly guy came in and
asked about radios "to talk to my crew." Yeah, I suppose he could have
been a stock broker, too.

As for the rest of the question: why would I want to set Sammy Salesdroid
straight? What would I have gotten for my trouble. Nothing, except for a
dirty look or two, while S.S. pocketed the commission on a couple of
Motorolas.

The store, BTW, was in Minnesota. But I'm guessing this kind of stuff
happens all too often at all too many stores. Anyone else have similar
experiences?

I've been buying and having radios serviced at AES for years
with excellent results.

My only incident of poor service was with Orlando.

That is not what was said I know because I said it. You have to
participate in at least one session per year or you can loose you
accredidation.

>
>I have given some.

The rules are very clear you are required to participate in one session
per year to keep your VE status. The fact that they have not purged
W1TTY has no bearing on your case. Since you repeatedly refuse to give
the date of the last VE session you apparently have something to hide.
If you leave yourself vulnerable you have nobody but yourself to blame
when you get whacked. Now if you met all the criteria (they are in the
VE rules book the ARRL sent you) and they tossed you you might have a
bitch but if you didn't hard cheese.

Hi,
I have just cut the diode that lets you tune the radio over a wider range
it will read out 140.000 to 149.990 but will not lock below 144.000
i only want to be able to tune down to 143.625, any help or further mods
will be of great use ....

> 2-3 ops.

Field Day is not a good example. The reason is somewhat obvious: Field Day is a competition where US hams try to contact as many other US hams as possible. Only 9% of US hams are Extra Class licensees, so it wouldn't make much sense operating a Field Day station on the Extra Class portion of any band. Instead, if you want to maximize the number of people who could reply to you, you'd go to a sub-band where most hams can operate... ie. the Novice bands. There, everyone from Novice to Extra Class could reply to your CQ.

> In my experience and opinion,9 of ten ops on 10 mtr are either there
> because they are Tech+ or Novice OR they are there to talk to Tech+ or
> Novice ops!!! Either way,they are all bound to the Tech+/Novice segment
> of the band.

Well, people operating on the Novice *sub-band* may well be there because they want to talk to Novice/Tech+ operators. However, General, Advanced and Extra Class operators are not *bound* to that sub-band of 10m. When the sun-spot cycle is at its best, you'll hear activity all over 10m.

Or the time when I went into Radio Shack looking for 20Amp fuses and was
told by a salesman that "You don't need 20Amp fuses, use 15Amp fuses". He
couldn't understand that if I used 15A fuses, they would blow, because my
equipment requires more than 15A!

Yes. The median age of the operator on 11m is about 50 years younger.

-Drew in Sunny Central Florida-
KF4DDM since 9/95 on 2m & 10m
KADF-6895 since 9/76 on 11m
Active scanner and Internet freak as well
(no license required)

I think they meant 50 dollars per application, not per year.

>"My coax tunes my antenna."

Without a choke balun to keep antenna currents off the outside of it,
it certainly can. That's because the coax shield becomes *a part of the
antenna*. And even if antenna currents are choked off the outside of
the coax, it will still act as a tuner, IE as a transmission line transformer
which will convert the feedpoint impedance of the antenna to something
else at the transmitter, if the feedpoint impedance of the antenna doesn't
match the characteristic impedance of the coax.

The FM rptrs on 10 mtr are full of Novice,Tech and Tech+ ops!!!They
are working thru remote-base radios.I am not sure of the legality of
this but it is happening non-the-less.I dont necessarily have a problem
with it,just curious if it is legal and under what specific
circumstances it would/would not be legal.

Well, you got the FREAK part right anyway. The other difference between 11m and 75m is that you hear a lot of whining on 11m about how the rules should be changed because there are some people who are too lazy to study. People are having quite a bit of fun on HF. Get off your ass and study and within a month you could be on there too. Just think Drew, you could join your butt buddies down on 75 meters. Then you wouldn't have to just listen and masturbate.

Derek

The $30 or $50 is clearly a pre-payment for ten years' use of a
requested Vanity Call, and for the ARRL or the FCC to call it an
`application fee' is highly misleading. Although the payment must be
included as part of a complete application, it is only kept if a
requested call is awarded under the program and will be refunded by
the FCC if no call is issued and upon a written request for refund.

Here's one:

If you wrote this unfounded piece of trash.

Moral superiority is a heavy cross to carry. Try the immortal words 'Judge not lest ye be judged.' Keep your own actions above reproach. Shame will come to the 'losers' through their own sense of guilt.

BTW, I noticed it was okay to cheat on your wife no more than once. Is that because that is your mark or because once is okay?

In as much as I hate to agree with something Spew sez, opening 10 meters
to all amateurs makes a lot of sense. 10 meters is the largest and most
underutilized HF band. Even when the band is "open", most of the band's
activity is centered under 28mhz. Although It is unusuable for long distance
comms a great deal of the time, and from everything I've heard when I've
scanned the band, is used by a large number of amateurs for local
or short-distance (regional) communications. Granted, right now a lot of
this has to do with us being at the bottom of the sunspot cycle...
However, opening 10 to all amateurs wouldn't really hurt the hobby,
it wouldn't cause overcrowding (like what would happen if you
opened, say, 20 meters to everyone), and it could actually encourage
people to upgrade to higher license classes.

284. AutoFAQ Sent to Over 5100 rec.radio.amateur.misc Posters

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-04 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <33bd499f.0@newscene>
Source record: 194306

In September of 1996, I started discretely mailing an introductory letter to all posters to rec.radio.amateur.misc. This is accomplished via a special Perl script originally written by comp.infosystems.www.* FAQ maintainer Tom Boutell, who uses it on comp.infosystems.www.authoring.html, to send each poster such a letter once, and only once. It runs from a Unix cron job on my host every morning at 2 AM and queries my local news server via NNTP for the headers of any new articles posted to this newsgroup. About 15-25 new posters on average receive the message each day.

Here's a breakdown of recipient's reactions to the letter over the last 9 months. All feedback was politely replied to, usually with a version of the rebuttal arguments given below:

A half-dozen people strongly objected to it (spamming and junk mail seems to have rubbed sensibilities raw with regard to receiving unsolicited, possibly automatically-sent, E-mail; experiences in other newsgroups demonstrate it to be "just barely redeeming" in terms of dealing with the massive influx of new users)

Another half-dozen thought it was a bit wordy (the message needs to be "one size fits all" and some recipients might be very confused without some background explanation; the letter attempts to get to the point as quickly as possible, but pragmatically is also optimized to minimize the amount of followup correspondence I have to engage in)

Another half-dozen insisted that they never posted to rec.radio.amateur.misc (all of them without exception did post, but it was from following up in another newsgroup to a cross-post, and not realizing what was on the Newsgroups line)

About two-dozen complimented me for posting it (which I appreciate)

The overwhelming majority did not respond, indicating one of several possibilities:

- they approve of it
- they disapprove, but not enough to bother replying
- the mail was misdelivered (I got a few bounces, often from deliberately munged Reply-To: addresses to ward off "spam")
- they don't care

So, my impression is that the project is at least a qualified success, and should continue in its present form. At the very least, it seems to be substantially non-controversial. Having primed the previous-poster database with over 5100 E-mail addresses, the chances of bothering an experienced reader with an unneeded introductory message is greatly

reduced, and will get even smaller with time. In fact, it's probably been about 3 or 4 months since I've received any negative E-mail.

I'd be interested in hearing your opinions on this project. I'd also like to solicit volunteers to initiate similar projects in some of the special-topic newsgroups (perhaps starting with my previous-poster database as a baseline, and modifying the letter to contain pointers to the more topic-specific FAQ's and information; the .digital.misc, .homebrew, .equipment, and .policy newsgroups seem to be good candidates for a project of this type).

For those who are curious, here is the current version of the letter, slightly modified in response to feedback as the project progressed.

Subject: WELCOME to rec.radio.amateur.misc

Hello,

This brief E-mail message is automatically sent to every new poster (as of September 21, 1996) to rec.radio.amateur.misc (and its associated mailing list, Info-Hams). Please note that even if you don't read or subscribe to rec.radio.amateur.misc, you may have inadvertently crossposted to that newsgroup by following up to an existing article crossposted to many newsgroups, including rec.radio.amateur.misc (as the default behavior of most newsreaders is to inherit all of the target newsgroups of the previous article when following up). You should only receive this message once. My apologies if the program contacts you twice, perhaps at two different accounts. This is not a flame (criticism), only an attempt to help newcomers get the most out of the newsgroup. As this message is sent automatically, it is also not necessarily a criticism of your posted article. The information provided here represents good consensus advice that has been gathered over the years by experienced participants like myself. I hope you will consider it in that spirit.

Please look at the following resources, which will often answer your questions without the need to post at all. Every post to the newsgroup consumes the time and effort of readers all over the world, and your cooperation is essential to make the newsgroup useful for everyone. A little effort and expense on your part can save a great deal of effort and expense for others.

Thanks!

* * *

1. The Amateur Radio Frequently Asked Questions (FAQ) List, formerly maintained by Diana Carlson, KC1SP and Ian Kluft, KO6YQ, has recently been resurrected by John Seney, WD1V. The majority of the original content of the FAQ remains the same, but now it's a hypertext document with hundreds of links to radio-related sites and is a significant resource to all students of amateur radio - regardless of their license status. It may be accessed via your World-Wide Web (WWW) browser (such

as Netscape, Mosaic, Lynx, or Internet Explorer) at:

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

It is also available in text form. Send an message to John's E-mail address below with the words "HAM FAQ" on the subject line.

Please direct any submissions, feedback, or administrivia regarding the FAQ to john@wd1v.mv.com.

2. The Amateur Radio Elmers Resource Directory is an excellent supplement to the FAQ as it's a directory of "Elmers" (mentors, experts, and gurus) for amateur radio who can answer questions via Internet E-mail and via the various resources (such as special-topic FAQ Lists and WWW pages) that they maintain. It is accessible both as a WWW page:

http://www.novia.net/~pschleck/elmers/

and as flat text files:

ftp://ftp.novia.net/customers/pschleck/elmers/

Please direct any submissions, feedback, or administrivia regarding the Amateur Radio Elmers Resource Directory to elmers-request@novia.net.

3. The Guide to the Personal Radio Newsgroups, written by Jay Maynard, K5ZC, provides an excellent overview to all of the USENET newsgroups devoted to amateur and CB radio. It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro

4. A Guide to Buying and Selling on Usenet, also written by Jay Maynard, contains a number of good pointers for reading and posting articles concerning the buying and selling of radio and radio-related equipment on the USENET newsgroup rec.radio.swap (which is the only appropriate forum for such articles). It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

Please direct any submissions feedback, or administrivia regarding the above two resources to jmaynard@nwpros.com.

5. The national amateur radio society of the United States, the American Radio Relay League, has a presence on the Internet. You may access their comprehensive and informative home page at:

http://www.arrl.org/

or their automated file server by sending a message with the word "help" to:

info@arrl.org

(They also have information about amateur radio organizations in other countries.)

6. Read the newsgroup first to see if your question has already been answered. You may also view, and search for keywords in, older news articles (going back to March of 1995) at the DejaNews archive:

http://www.dejanews.com/

Many topics have been discussed before, often in great depth, but the articles have expired from your local news server. Services like DejaNews allow Usenet a much longer "institutional memory" that can greatly benefit both new and experienced users.

7. If you do post to the newsgroup, give as many details as possible. After you post, read the newsgroup for a week or two to see all replies to your posting. If you wish, ask for responses by E-mail and offer to post a summary if others are interested in the answer to your question.

8. Remember, USENET newsgroups are based on the idea of mutual aid. USENET only works if we put as much into it as we get out of it. Good luck with your experiences with amateur radio and the amateur-radio-related USENET newsgroups.

73, Paul W. Schleck, K3FU

(Text of article adopted from Tom Boutell, World Wide Web FAQ Maintainer, with modifications.)

Please continue crossposting to "rec.radio.amateur" newsgroup.

Before I crossposted mass articles, I saw nothing on
"rec.radio.amateur"

Now, there are around 100 articles.

Don't make this newsgroup [rec.radio.amateur] die !!
"rec.radio.amateur" can be used for anything that relates to the ham
radio.

Thank you.

I have heard the same thing and expect to hear more of this in the future.
Consider that many incoming hams, both Techs and Tech Plusses own 2510s,
2950s, etc., that can already cover these frequencies. When these
incoming hams realize they are being denied use of bands or portions of
bands simply because of an antiquated Morse Code requirement, I would
imagine that they will be inclined to shrug their shoulders, ignore the
unfounded restrictions against them, and use these frequencies regardless
what the ARRL or the FCC says on the matter.

The '10 meter' Amateur band STARTS at 28 MHz.How could most of the
activity be under the band?Maybe you meant 28.5 MHz:<)

This message is a guide to buying and selling over Usenet. It is intended to serve as a guide for users unfamiliar with common conventions used in the Usenet marketplace. Questions and comments may be directed to the author, Jay Maynard, K5ZC, via Internet electronic mail at jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 29 June 1994 to add the discussion about how UPS does COD remittals. Thanks go to readers of the personal radio newsgroups, who provided feedback to the net about proper use of this forum, and especially Paul W. Schleck, KD3FU, pschleck@unomaha.edu, who compiled most of the net wisdom and suggested the creation of this article.

Usenet has proven to be a valuable resource for many folks. Along with lots of discussion, argument, and good, solid information, it's also a good place to buy or sell equipment, and many people have done so successfully. As with any other medium, though, there are conventions that make everyone's life easier if they're followed as much as possible.

The following are some suggested guidelines for using the rec.radio.swap forum, based on general net-wisdom from users. Most of it is basic common sense, but it is unfortunate that some users have consistently abused this forum by not following such basic common sense. The general guidelines will serve as well for other groups on the net, such as misc.forsale and just.about.anything.marketplace.

What is appropriate to post in rec.radio.swap?

Any offer to buy or sell radio and electronics equipment, such as transmitters, receivers, antennas, electronics parts, and radio-related computer equipment is appropriate for this forum. Posts concerning non-hardware (but still radio-related) items such as documentation manuals, books, radio-related software, and publications, are also welcome.

Please do not post discussion articles to this group. If you really must post, please do so to the appropriate discussion group. Use email whenever possible, especially if you feel someone has committed a breach of etiquette.

Articles concerning illegal equipment (such as CB linear amplifiers and police radar jammers) are not welcome. Not only will you be severely "flamed", you are also opening yourself (and possibly the owners and administrators of your news site) up to civil and criminal liability. Individuals who are involved in the regular business of buying and selling for profit are requested not to abuse this forum by using it as a "free advertisement" service for their business, although they are welcome to participate as individuals. The distinction here is that there is a cultural bias on Usenet, and an actual prohibition on some networks that carry Usenet traffic, against using the net for commercial purposes. Let your conscience be your guide.

Doesn't this article violate its own guidelines?

Well, yes and no. In the strictest sense, this article violates the rule that only buying and selling advertisements belong in the rec.radio.swap newsgroup. However, since those using this newsgroup are most likely to see articles in the same newsgroup, and since this newsgroup serves readers of the rec.radio.amateur.*, rec.radio.cb, rec.radio.shortwave, and rec.radio.scanner

newsgroups, posting it here provides the greatest visibility with the least intrusion. Other suggestions which achieve the same goals are welcome.

If you are looking for something specific...

Try to first find the item through other channels before resorting to the net. If the manufacturer is still in business, you may be pleasantly surprised that they still have the items on the shelf. Other companies specialize in discontinued and surplus parts and equipment and are your best source for tracking down items. Consult the mail-order electronics list, available from ftp.cs.buffalo.edu in file ~/pub/ham-radio/mail_order, or the advertising sections of most popular radio and electronics publications.

Once you have exhausted all other channels, then certainly do post. State clearly what you are looking for (e.g. "a part# 345X56 Bakelite Frobnicator for an American Hawk Fubar 2000, circa 1968-1970"), and how much you are willing to pay (or that you're willing to negotiate). Avoid sending out "equipment-wanted" posts unless you are willing to pay for shipping from wherever it may turn up (this newsgroup is read throughout the world), or state clearly where you're willing to accept items from. Use the Distribution: header line to limit where your posting will go, but be aware that it's far from an absolute restriction; articles with ba (San Francisco Bay area) distribution, for example, are imported to places like Boston, London, and Singapore regularly.

If you are selling equipment...

Be specific in your first post about what you are selling and how much you want for it (or that you're willing to negotiate). State clearly whether or not the price includes shipping, and if it does, be sure to allow yourself a reasonable amount to cover the cost. Avoid sending out "for sale" posts unless you are willing to arrange for shipping to whomever in the message distribution wants to buy it (and remember the comment above about Distribution: headers...); if you cannot limit the posting's distribution for one reason or another, be clear in your message about where you will and will not ship. The US Postal Service has a 50-pound limit on the weight of packages sent through them, and United Parcel Service has a 150-pound limit; other carriers have similar limits. Check with your carrier before shipping. Anything heavier will have to go by motor-freight (read: EXPENSIVE). Don't advertise equipment that you cannot ship within a reasonable amount of time.

Once you have made a deal, state clearly your intentions and follow through on them. Nothing angers a buyer more than delays and excuses. Once you do ship, have it securely packaged (insurance is strongly recommended). Payment terms should be whatever you and the buyer are comfortable with, and commonly include options such as money up-front, COD (Collect on Delivery), or payment upon receipt and inspection. Don't be offended if the buyer wants to take steps to protect his position, since he probably doesn't know you. Most readers of this forum are basically honest and want to maintain their net-image, but the few bad apples should encourage you to only deal with honest, reputable people and to reasonably protect your position in any transaction.

Remember that COD stands for "Collect on Delivery" and not necessarily "Cash on Delivery." The carrier collects the funds from the buyer, and then hands him the package; they then send the payment on to you. They are not a party to the transaction, and so they don't care if the buyer gives you a bad check. Therefore, you may want to specify the collection of cash, money order, or other certified funds for your COD. Check with your carrier for exact COD options and policies. If you choose this option, make sure the buyer knows up front so that he can make the necessary arrangements. One thing to remember is that UPS, at least will send whatever is Collected on Delivery to the shipper's address as recorded in their files, and NOT to the return address on the package. If you use a commercial packing and shipping service, you'll have to go back there to pick up your payment; if you send from your office, make sure the shipping department knows what to do with the check they'll get from UPS in the mail.

If you are buying equipment...

Respond to an advertisement in a prompt manner. (The item may well not be available if you don't!) Don't skip a message just because you think the price is too high; offer the seller a price you think is reasonable instead. You might be pleasantly surprised. State clearly your terms and intentions and follow through on them. Nothing angers a seller more than delays and excuses. As radio equipment is generally bulky and fragile, allow for a reasonable amount of money to package, insure, and ship your purchase properly. Payment terms should be similar to those suggested under seller's guidelines, and should reasonably protect your position (remember, you are probably buying equipment sight-unseen from a relative stranger), but remember that he needs to protect his position as well. If you are unsure of a given seller, ask a net-regular discreetly via E-mail. He or she will be more than happy to either ease your concerns or confirm your suspicions.

In general...

When you post to rec.radio.swap, be sure to use a meaningful Subject: line. "FOR SALE" or "WANTED", by themselves, give little information to the person skimming through the group by looking at the message subjects. "IC-32AT dual band 144/440 handheld for sale, $400" is much more useful; if the reader is looking for HF transceivers, he can skip right past your message. If you have lots of different things for sale, try to give as much information as you can, but remember that most systems get unhappy at Subject: lines longer than 80 characters, and a few older ones truncate them at 40.

It's generally a good idea to include your geographic location and a phone number where you can be reached somewhere in your posting as well. Besides reassuring your potential buyer or seller that you are a real person, it's often easier to bargain and make other arrangements on the telephone than through a protracted electronic mail exchange. Some buyers prefer dealing with folks in their local area, too, as that makes it easier for them to inspect the equipment before paying money.

The Usenet marketplace groups in general, and rec.radio.swap in particular, are a great place to buy that piece of gear you've had your eye on. Items go quickly for reasonable prices. I've sold a radio within three hours of posting

the for sale message. The usefulness of these groups depends to a large extent on the people who inhabit them, though, and a few unscrupulous users can easily sink the whole thing. Whether you are a buyer, seller, or seeker of equipment, remember that your honesty and integrity reflects on the general reputation and usefulness of this forum and amateur radio in general.

Sure, anything's possible. But one should know better than to use coax
with a balanced antenna without also using a bal-un.

One can also "tune" one's antenna by changing its height above ground.
The radiation resistance of a horizontal half-wave antenna can be varied
between 0 and 100 ohms just by varying its height. But we don't normally
use this fact as a method of "tuning" such an antenna.

One of the ham magazines did contained a fine article debunking the
myth that "my coax tunes my antenna" (that was the article's title).

Drew,

Try spending some time upgrading instead of whining about the
requirements. The whole idea behind incentive licensing was to give
people a reason to upgrade.

Hi James,
We've got plenty of RS stores out here. I'm rebuilding a 50s era
transmitter and RS is my main source of parts.

So tell us what radio-related projects you're busy with. Built anything
lately? Do you know which end of a soldering iron to hold?

: (I originally posted this query to some Electronics groups, and it was
: suggested that the Radio groups would be more likely to have an answer.)

: Can someone here please give me a quick tutorial, or point me to
: information, about how to calculate the inter-winding capacitance (and
: self-resonance) of a multi-layer coil, based on the geometry? Thanks.

: --- mkj

Well, there is one, although it is a bit old:

1. Breit, G., "The Distributed Capacity of Inductance
Coils," The Physical Review, Vol. 18, No. 2, August 1921,
pp. 133-135.

For which there is a much more extensive discussion in:

2. Breit, G., "The Distributed Capacity of Inductance
Coils," The Physical Review, Vol. 17, No. 6, June 1921,
pp. 649-677.

For multi-layer coils, I can't seem to find anything else in
files. However, if they might be of any value, here are some refer-
ences related to single-layer coils (solenoids), which may lead you
to what you're seeking:

3. Palermo, A.J., "Distributed Capacity of Single-Layer
Coils," Proceedings of the IRE, July 1934, pp. 897-905.

And, for measuring the capacitance, there is one very good
reference outlining a good technique:

4. Dunn, John, "Dual Resonance Measurements Evaluate Un-
known Coils," RF Design, October 1994, p. 54.

I gotta go.

Regards,

Chris

> Any information would be appreciated.

Yes, it's true. the article was in QST and the Antenna does sound to
good to be true. If you'll read the article, you'll note that while
height and longer wire make the antenna better, it is not very efficient
when short and low especially on the low bands. But it does Match on all
frequencies. The QST article is in the November 1995 issue, page 22.

Looking at the article it's one *@#$#@% fine concept!

Now, if someone will only put one up and do a report on it.!

What state of affairs would that be? Your inability to interact with
other hams in a creative forum? Or are you trying to screw a PL259
connector into a BNC on your handy?

I post with my name and call,no one has to pry either one out of me. I'm proud of my call,I worked for it. I operate HF and VHF/UHF daily. If you think your going to cause change in amateur radio when your afraid to transmit or post with your call. You won't even make a perceptible fart in the proverbial whirlwind.

I have had a couple of minor problems with AES. Both were solved by
using some good buying practice. Suggest next time you buy from
AES, or any other ham dealer you follow these practices:
1. Always purchase using a major credit card. It leaves you at an
advantage if there's a problem.
2. Have the sales agent write on you order: CANCEL THIS ORDER IF

NOT COMPLETED WITHIN TEN WORKING DAYS. Do not let him talk
you out of it. Assume any order older than ten days is gone.
3. Any equipment that is to returned for warranty repairs should
also include a letter to the dealer and the credit card company
requesting that payment be held until repairs are completed
and equipment is working properly. This may get you some
cuss words from the service manager. Good luck with
shopping. Dave

311. License grace period, etc.

>> How much time do you have after your license has expired to renew?
>>
>> Thanks,
>>
>> Lowell
>> NC5L

You should renew within a 60-to-90-day period prior to the license expiration date.
If you know the FCC has received your application for renewal, you may continue to operate until your renewed license arrives. If you do not hear from the FCC in a timely manner, and the expiration date is imminent, contact the FCC to determine the status of your renewal application. (Who knows - your Form 610, or your new license, may be lost in the mail, although this is not very likely... the FCC license envelopes are not those tiny little things they used to send out.)

At the moment, applications for renewal are taking ony a few weeks at most to be processed and the renewed license mailed back to you. The date of the 10-year beginning period will be the date they processed it, not the expiration date of your current license.

You cannot operate, but you can wait up to 2 years (the grace period) to renew your license. If you wait beyond that point, you have lost your license AND your callsign, and must start all over again.

73- Fred - NY2V
--
You should have a copy of Part 97 on hand. Just ask for one from the FCC. Or, to get one with some plain-language discussion, get a copy of the ARRL's "The FCC Rule Book". One book, published annually by CQ, is the "Amateur Radio Almanac." It contains Part 97 and is filled with much useful data. A similar book, although the contents are not identical but are nevertheless extremely useful, is "The ARRL Operating Manual". Part 97 does not say you must have it on hand. If, however, you get in ham radio's version of hot water, ignorance of the Part 97 rules will not be a legal excuse.
--
I believe you can get FCC documents by calling 800-418-3676.
The FCC also has a free voice-mail line: 888-322-8255.

You do NOT need to produce a license to buy ham radio gear. I bought my 202
3 days before taking my tests. I used it only to listen until my paper license
came 4 weeks and a day later.

Anyone have any experience with this antenna matcher (catalog # FK-2)?
From the description it appears to be a set of torriod matching
transformers, one at each end of 30-70 feet of wire, that is supposed to
work from 160 through 10 meters. They reference an article on it in QST.
Any information would be appreciated.

>Now, they tell me that they don't have any records of my order.
>I have received nothing. It's two weeks now.
>Beware of AES.

I've ordered many, many things from AES over the years and have never had a
problem of any kind. My last order was about as small an accessory as you
can get: a DC power cord for my Yaesu FT-530, about $7.00. Arrived via UPS
in the quoted time, just as expected.

In short, AES is very friendly and very knowledgeable, about the only complaint
I have is that they wouldn't buy my old Yaesu FT-411E to sell as used.
(Something about them already having three... ;-))

Well I have to say this may have an air of truth. I was once in one of the stores in Reno, NV when a sales person tried to sell a 202 to someone without even producing any license. This both shocked and appaled myself an a friend of mine. When we mentioned something to the sales person we were promptly met with a "I am not aware of such rules and we were to wait our turn to be waited on." Then when we protested some more we were very promptly ask to leave the store and not patronize the business again..

Take it for what it is worth, that person is now a legal ham but at the time he did not have a license because I saw him at the next testing session and he was taking the Novice and Tech tests..

$$$ Big Time Mailbox Cash $$$

A little while back, I was browsing these newsgroups, just like you are
now, and came across an article similar to this that said you could make
thousands of dollars within weeks with only an initial investment of
$5.00! So I thought, "Yeah, right, this must be a scam," but like most
of us, but I was curious, so I kept reading. Anyway, it said that you
send $1.00 to each of the 5 names and address stated in the article. You
then place your own name and address in the bottom of the list at #5,
and post the article in at least 200 newsgroups. (There are
thousands.) No catch, that was it.

You can make up to or over $50,000.00 in 4-6 weeks, maybe sooner! I
SWEAR, I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're
interested in making some big bucks, keep reading; if you're not, I
apologize for wasting your time.

So after thinking it over, talking to a few people first, I figured what
have I got to lose except for 5 stamps and $5, right? One person who
very recently had tried it said it worked like a charm. He started
getting money in the mail! He was shocked! He figured it would end
soon, and didn't give it another thought. But then the money kept
coming IN - tripling in size and multiplying by 10 - 20 times the
amount that he got the first week! In his first week he had made a
total of over $1,000!!! In the third week he had over $10,000 dollars,
and it's still growing! This is his fourth week and he's made about
$42,000 Total, and believe it or not the money is still coming in...

I know this has been checked out several times with the legal community
and is deemed perfectly Legal, but being a very cautious person, I also
wanted to check it out with the US Post Office. I called them
(1-800-725-2161) and explained this process and asked if there were any
regulations that would be violated by doing this. Without hesitation,
the postal official also said it is legal. At that point, I felt
comfortable going ahead and joining the process.

Let me tell you how this works and most importantly, WHY IT
WORKS!...Also, make sure you print a copy of this article NOW, so you

get the information from it, and begin making money. The process is very simple, and it consists of 3 ease steps:

STEP 1: Get 5 separate pieces of paper and write the following on each
sheet of paper: "PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER #."

Get five $1 bills, and place ONE inside each piece of paper that you have just written on, and fold each piece of paper so the bill will not
be seen in the envelope (otherwise, nosy people who like to steal envelopes with money in it will not get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5
envelopes sealed, each having a piece of paper AND the $1 bill inside. NOTE: Make sure those words that were stated above are written on each piece of paper. What you are doing is creating a service by this. This
is PERFECTLY LEGAL. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

#1 P Gratrix
12165 Monaco Dr.
Brighton CO 80601

#2 T. Livingston
2361 Antietam Circle
Lemoore, CA 93245

#3 K. Burks
HC 01 Box 103
Keene Valley, NY 12943

#4 Paulo Aboim Pinto
Praceta 1º de Dezembro 5 c/v esquerda
2675 Odivelas / Portugal

#5 Miguel Kennedy
Avenida Nossa Senhora do Rosario Nº1042
2750-Cascais / Portugal

STEP 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you
need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well, do exactly the
following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To
News,
which
is in the top left corner of the newsgroup page. This will bring up a
message box.

2) Fill in the SUBJECT with a flashy title, like the one I
used,
something to catch the eye!!!

3) Now go to the message part of the box and retype this
letter
exactly
as it is here, with exception of your few changes. (Remember to add
your
name to number 5 and move the rest up)

4) When you're done typing in the WHOLE letter, click on FILE
above
the
send button. Then, SAVE AS.. DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE
IT. (So you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your
first
copy! (Click the SEND button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup
article
and
click the TO NEWS button again. Type in your flashy subject in the
SUBJECT BOX, then go to the message and place your cursor here. Now
click on ATTACHMENT which is right below the SUBJECT BOX. Click on
attach file then find your letter wherever you saved it. Click once
on
your file then click OPEN then click OK. If you did this right, you
should see your filename in the ATTACHMENT BOX and it will be
shaded.

NOW POST AWAY!!

IF YOU ARE USING INTERNET EXPLORER:

It's just as easy, holding down the left mouse button,
highlight this entire article, then press the CTRL key and C key at
the
same time to copy this article. Then print the article for your
records
to have the names of those you will be sending $1.00 to.

NEXT, Go to the newsgroups and press POST AN ARTICLE type in
your
flashy subject and click the large window below. Press CTRL and V and
the article will appear in the message window. ** BE SURE TO MAKE YOUR
ADDRESS CHANGES TO THE 5 NAMES. ** Now re-highlight the article and
re-copy it re-copy it so you have the changes.... Then all you have to
do for each newsgroup is CTRL and V and press POST. It's that easy!!

THAT'S IT! All you have to do is jump to different newsgroupes
and
post away, after you get the hang of it, it will take about 30 seconds
for each newsgroup!

** REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE
MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF
200 **

This is WHY this works!

Out of 200 postings, say I receive only 5 replies (a very low
example).
So then I made $5.00 with my name at #5 on the letter. Now, each of
the
5 persons who just sent me $1.00 make the MINIMUM 200 postings, each
with my name at #4 and only 5 persons respond to each of the original
5, that is another $25.00 for me, now those 25 each make 200 MINIMUM
posts with my name at #3 and only 5 replies each, I will bring in an
additional $125.00! Now, those 125 persons turn around and post the
MINIMUM 200 with my name at #2 and only receive 5 replies each, I will
make an additional $626.00! OK, now here is the fun part, each of
those
625 persons post a MINIMUM 200 letters with my name at #1 and they
each
only receive 5 replies, that just made me $3,125.00!!! With an
original
investment of only $5.00!

AMAZING! And, as I said 5 responses is actually VERY LOW! Average is
probable 20 to 30! So lets put those figures at just 15 responses per
person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest
posting in the newsgroups, and send out another $5.00 to names on the
list, putting your name at number 5 again. Then start posting again.
The

thing to remember is, do you realize that thousands of people all over the world are joining the Internet and reading these articles every day, JUST LIKE YOU are now!! So can you afford $5.00 and see if it

really works?? I think so - People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!!

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. ** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again
:)

Another question that I have is why didn't you take one of the cards for the district manager and clue him in. I do work for rs and the people that I work with no which radios to sell for which purpose. It was probably a new employee and had no experience with amateur radio.

Been extra class for 7 years. RS sales for 2. I do protect my hobby.

Please help me with the following poll (by email):

From the below list of tone frequencies, please tell me the highest tone
your radio is capable of *decoding* (if no built-in decoder you don't
get to participate!). Also include the make and model of your radio.
This info will help us decide the on the highest (common) tone freq'y we
should use for a particular island-wide signalling application.

Thank-you in advance,
Jeff KH2PZ

Hey Ian - read my first sentence: "The analysis comes into play prior
to construction." What part of that don't you understand?

>>>How sad for amateur radio.

>>That's why we're referred to as "amateurs." The "professional radio service"
>>is next door.

>We're referred to as "amateurs" for a variety of reasons, including:
>1. We don't get paid.
>2. We don't have access to professional equipment.
>3. Most of us have less time than professionals, because our full-time
> job is something else.
>4. Because of #1, #2 and #3, we sometimes have to cut corners.

... and we're self-taught in our spare time. That's quite a bit different
than someone who's gone through a 4 or 6 year university electronics
curriculum.

>5. We can't be bothered to think and learn how to do it right.

If you're serious about this one I suggest you look for another hobby
to participate in - you'll be a danger to yourself and others.

Keplerian sets are used to up-date satellite tracking programmes.

Satellite orbits tend to change with time (the lower they fly, the more
they change), so tracking programmes need to have current information if
they are to remain accurate.

Can not help with question #1....sorry.

Good luck.

: time he did not have a license because I saw him at the next testing
: session and he was taking the Novice and Tech tests..

Well, it worked out just fine, then. You do not have to have
a license to buy a ham rig, just as you do not need a driver's
license to buy a car. At our local RS stores, there are pamphlets
supplied by the local club explaining ham radio and licensing
requirements, which is nice. But you don't need a license to
buy a rig.

FCC TO OPEN VANITY GATE 3

The long wait is over for Advanced class amateurs. The FCC has just announced that it will open filing Gate 3 of the Vanity Call Sign Program on Wednesday, August 6, 1997. Advanced class hams will be able to apply for a call sign appropriate to their license class on or after that date. Applicants must file either a paper FCC Form 610V or electronically via the FCC's Web site at http://www.fcc.gov/wtb/amradsrv.html and pay the current $30 fee.

The August 6 deadline squeaks under the implementation of the FCC's new fiscal year 1997 fee schedule, adopted June 16. Under the FY 97 schedule, which becomes effective September 16, 1997, the vanity application fee will jump to $50 a year. The ARRL had asked the FCC to suspend implementation of the higher FY 1997 fee until after the remaining gates have been opened and applicants had an opportunity to file under the old schedule. The FCC's response, buried within the Report and Order adopting the higher fees,

suggests the FCC could also be planning to open Gate 4 fairly soon. "We expect our remaining vanity call sign 'gates' to open before the effective date of our FY 1997 regulatory fee payment requirement," the FCC said in turning down the request for a delay. But, the FCC added that applicants "are expected to pay the fee applicable at the time they file."

The bottom line is that hams applying for a vanity call sign on or after September 15 must pay the $50 fee.

Payment of fees may be made by check (payable to FCC), bank draft, money order or credit card. If paying by credit card, you must also complete and submit FCC Form 159 with your FCC Form 610V. Do not send cash. Send your application package to: Federal Communications Commission, Amateur Vanity Call Sign Request, Box 358924, Pittsburgh, PA 15251-5924

If you file a paper application, remember that legibility is critical! If your application is not able to be deciphered easily by FCC personnel, you could experience a delay in processing, lose the opportunity to obtain a requested call sign or even obtain a call sign different from what you want. Be sure to include your current Amateur Radio call sign on your vanity application.

Under Gate 3, you must hold an unexpired Advanced class operator/primary station license to request a vanity call sign for your primary station. To request a vanity call sign for a club station under Gate 3, you must also hold an unexpired club station license grant listing you as the license trustee. Applicants should refer to the licensee database to verify that a requested call sign is not already assigned. A call sign is normally assignable two years following license expiration, surrender, revocation, set aside, cancellation, void ab initio, or death of the grantee.

Using Form 610V or its on-line electronic equivalent, applicants may request up to 25 call signs in the order of preference. The first assignable call sign on the list will be the one the FCC assigns. Remember: When requesting a call sign under Gate 3 for your primary or club station, the call sign must have been unassigned for at least two years. As an Advanced class operator, you may request a call sign only from groups B, C or D.

Any call sign requested must be one designated for the region of your mailing address, as follows:

* One of the contiguous 48 states: Regions 1 to 10.
* Alaska: Regions 1 to 11.
* American Samoa: Regions 1 to 10, or Region 13 having numeral 8.
* Commonwealth of Northern Mariana Islands: Regions 1 to 10, or Region 13 having numeral 0.
* Guam: Regions 1 to 10, or Region 13 having numeral 2.
* Hawaii: Regions 1 to 10, or Region 13 having numeral 6 or 7.
* Puerto Rico: Regions 1 to 10, or Region 12 having numeral 3 or 4.
* Virgin Islands: Regions 1 to 10, or Region 12 having numeral 2.

For explanations of Groups B, C and D and the geographic regions, see Fact Sheet PR5000 Number 206S, Amateur Station Sequential Call Sign System (or

see The ARRL Letter Electronic Update, August 16, 1996, available on the ARRLWeb at http://www.arrl.org/). For more information on the vanity call sign program, see Fact Sheet PR5000 Number 206V Amateur Station Vanity Call Sign System.

If you file before the opening date or do not qualify under the Gate 3 eligibility standards, your application will be dismissed. General, Technician Plus, Technician, and Novice class operators will become eligible to request vanity call signs under Gate 4. The FCC has not indicated when it plans to open Gate 4.

For further information, contact the Consumer Assistance Branch at 800-322-1117 or call the FCC's National Call Center, 888-225-5322 (CALL FCC).

MIR HAM RADIO BACK ON THE AIR

Ham radio aboard the Mir has been getting some casual use again as the three-man crew continues efforts to get life back to normal aboard the Russian space station. General ham radio operation was suspended in the immediate wake of the mishap last week that damaged one of the Mir's compartments. But this week, US ham-astronaut Mike Foale, KB5UAC, expressed "thanks for all your good wishes" to hams around the world. The British-born Foale is using both 2 meters and 70 cm "sparingly," according to SAREX Principal Investigator Matt Bordelon, KC5BTL. Werner Staubitzer, VO1CAT, in Pouch Cove, Newfoundland, reports he had "a lengthy QSO" with Foale over the weekend. Foale told VO1CAT that the crew was "feeling fine and is making repairs to the damages as best they can while waiting for the required parts to arrive." Ray Webber, ZS6RSW, in Pretoria, South Africa, reports that he connected to Mir on packet (using the 145.800/200 split-frequency pair) on June 28.

Foale and his Russian cosmonaut crew mates again found themselves in crisis mode at mid-week when the spacecraft lost attitude control. In a packet message to MIREX CEO Dave Larsen, N6CO, Foale related how, after the alarm sounded, "we go rushing from one dark module to another, trying to look out windows, and point the solar arrays. The station dies very quickly if we don't do this." Foale compared the situation to "being on a yacht at sea, with the wind changing all the time, and having to rush around pulling sails down, or putting them up, before a storm comes."

Foale said the attitude failure has made the crew very wary of the next Progress rocket docking, set for Monday, July 7. "Life on Mir is characterized by long periods of monotonous, serene calm, and short interludes of extreme frenzy, I am learning," Foale said.

The Progress rocket will supply cables and a special plate to fit over the hatch of the damaged Spektr science module. The crew will try to make cable connections to get the station back up to full power. Another Russian crew is scheduled to fly up in August to seal the leak and put the Spektr module back on line. Meanwhile, Foale and the cosmonauts are working on their new--but faulty--oxygen generator to get it back on line. They are using

incendiary candles to supply oxygen temporarily.

Although the cosmonauts have begun practicing the repair routines, they and Foale still have a lot of time on their hands, and much of that is spent in darkness to conserve electricity. This means Foale has time for hamming, and, so far, no one's objected to his using a few watts of power for the radio. While Mir remains a space station in trouble, Foale is providing Amateur Radio with an intimate view of the danger and drama.

KB5UAC plans to operate frequently, whenever NASA and Moscow are not using their main communication channels. Look for him on 145.800 MHz, operating split. Occasionally, while Mir is over the US, you also may find him on 145.985 MHz (simplex).

To track the Mir spacecraft, check out http://liftoff.msfc.nasa.gov/temp/Mir_loc.html. The page presents a graphical representation of Mir's location and updates every minute.--thanks to Roy Neal, K6DUE, for his contribution to this report

BLAHA: HAM RADIO "A USEFUL TOOL" ABOARD MIR

Mir alumnus John Blaha, KC5TZQ, says ham radio aboard the Russian space station has turned out to be more than a morale booster. "Now, more than in the past, it's a useful tool to get information back and forth," Blaha said over the weekend--just before heading for Russia to monitor Russian efforts to resolve the latest Mir crisis.

Blaha said the lack of power aboard Mir is the most important concern since it's impeding the crew's ability to do scientific research. "What occurred is significant," he said of last week's accidental collision between the Mir and an unmanned Progress rocket during practice maneuvers. Repairing the crippled space station will involve "space walks and a lot of complexity." He speculated that it could be a matter of months before the power situation on the space station is back to normal. Despite the troubles, "the Mir is safe," he said. The life support systems are operating and "they can jump into the Soyuz." While the Soyuz would serve as a lifeboat for a US astronaut aboard Mir, Blaha said the Soyuz is simply the vehicle the Russian crew members normally used to get up and down. "It's a very good vehicle," he said. "It's their shuttle." Blaha said the crew "did the right thing" when they realized the Progress rocket had punctured the Mir's outer shell. "They, in effect, saved the Mir space station," he said.

Blaha said that after some briefings in Houston, he was scheduled to travel to Russia "just to find out where they're headed" in resolving the Mir's troubles. He said he expected to be there for a week or two. The last-minute change in plans meant Blaha was unable to participate in Field Day with Oklahoma's Lawton/Ft Sill Amateur Radio Club, W5KS. Mark Ewell, KC5IZN, had invited Blaha and his wife, Brenda, to Oklahoma June 26-29 to visit a space camp for youngsters at Cameron University and to speak at a Chamber of Commerce luncheon the day before FD, and to get on the air with the club. As it turned out, Ewell said, Blaha turned in inspiring appearances at the camp and luncheon before heading back to Houston. He also gave an interview to a

local TV station. "It was one of the nicest days of my life," said Ewell.

SHUTTLE WITH SAREX LAUNCHED

With the Shuttle Amateur Radio EXperiment (SAREX) aboard, the shuttle Columbia dodged potential bad weather and took off slightly ahead of schedule a couple of minutes past 2 PM EDT Tuesday. Students at 17 schools, including one in the People's Republic of China, are scheduled to talk with the astronauts during the STS-94 mission. STS-94 is a "refly" of the April STS-83 mission, aborted after a problem developed in one of the shuttle's fuel cells.

Three hams are among the STS-94 crew members. They are Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF.

The first SAREX contacts were scheduled for Thursday, July 3. Students at Edgewater High School, Orlando, Florida, got to ask a dozen questions of the Columbia crew during their QSO around midday on July 3. Students at Lexington Traditional Magnet School, Lexington, Kentucky, were to get their chance to speak with the astronauts later that same afternoon. The primary goal of SAREX is to excite students' interest in learning.

The STS-94 crew already has been on the ham radio making contacts with earthbound hams. Apparently the first of nearly two dozen contacts that Don Thomas, KC5FVF, racked up in the first two days of the mission was one with David Guimont, WB6LLO, of San Diego, California, who caught up with Columbia on the air as it passed over the tip of Baja California.

John Moore, W4UE, and his wife, Judith, N4TAE, spoke Wednesday (at approximately 1640 UTC) with Don Thomas, KC5FVF, who was calling CQ with no takers at the time. W4UE and N4TAE also were among the very few contacts on the earlier, curtailed STS-83 mission in April. Another ham who worked the earlier the STS-83 mission was Al Lark, KD4SFF, of Greenville, South Carolina, who got lucky again this week. He worked KC5FVF on Wednesday at 1814 UTC and says he also heard Thomas work N9AB and K4HN.

The STS-94 crew will use KC5RNI, KC5BTK, and KC5FVF on FM voice and W5RRR-1 on packet. They'll be available for random QSOs during their breaks, before and after meal time, and during their pre-sleep time.

The SAREX Working Group has designated the following frequencies during this mission. FM voice downlink (worldwide): 145.55 MHz; FM voice uplink (except Europe): 144.91, 144.93, 144.95, 144.97, and 144.99 MHz; FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz; FM packet downlink: 145.55 MHz; FM packet uplink: 144.49 MHz.

Hams should avoid transmitting on the shuttle's downlink frequencies. The uplink is your transmitting frequency. The crew will not favor any uplink frequency, so your ability to communicate with SAREX will be the "luck of the draw." Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air. Columbia is scheduled to return to Earth on July 17.

QSLs go to ARRL EAD, STS-94 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information in your QSL or report: STS-94, date, time in UTC, frequency and mode (FM, voice or packet). You must also include a business-sized SASE.

Additional STS-94 mission information is available from NASA at the NASA Shuttle Web site, http://shuttle.nasa.gov.

The seventh shuttle-Mir docking mission on Atlantis is targeted for mid to late September. STS-86 will include the return of ham-astronaut Mike Foale, KB5UAC, from Mir and delivery of his replacement, astronaut Wendy Lawrence, KC5KII. The eighth and final mission scheduled in 1997 will be the STS-87 flight of Columbia slated for mid to late November. The 16-day mission includes the conduct of science experiments associated with the fourth flight of the US microgravity payload and the deployment and retrieval of a science satellite.

Although none of the remaining 1997 missions will carry the SAREX payload, the SAREX Working Group is seeking to schedule one or two SAREX missions for 1998.--thanks to Glenn Swanson, KB1GW, and Pat Kilroy, WD8LAQ, for their contributions to this report

COSMONAUT GETS US HAM TICKET

Cosmonaut Vladimir Titov now is KD5AOS. AMSAT Area Coordinator Bruce Paige, KK5DO, reports that Titov took his test at the Clear Lake Amateur Radio Club test session on May 10. Titov, a former Mir occupant, is scheduled to go on the shuttle-Mir docking mission in September. KD5AOS told Paige he took the US amateur radio exam because he would not be able to use the Russian call sign from the shuttle. Paige was one of the VEs that signed Titov's CSCE and Form 610 and had a chance to talk with the cosmonaut for a few minutes at the session.--AMSAT News Service via Bruce Paige, KK5DO

W1AW GOES ON THE ROAD FOR IARU WEEKEND

Remember last year's World Radiosport Team Championship, held as a "contest within a contest" during the IARU HF World Championship? This year's running of the IARU event lasts 24 hours, beginning at 1200 UTC July 12. While there's nothing quite as exciting as a WRTC slated for this year, there are a couple of interesting wrinkles.

The ARRL Headquarters station will be signing W1AW/7 from the station of W7RM in the state of Washington, to give amateurs in the western states and the Pacific a better chance at the ARRL multiplier. (The usual W1AW code practice transmissions and bulletins will continue during the contest period from ARRL Headquarters in Connecticut. W1AW will not be used for contest contacts except from the Washington location.)

Additionally, an IARU Headquarters station, NU1AW, will debut from Connecticut to hand out an additional IARU multiplier. All other headquarters stations of IARU member societies are also multipliers for this event. See how many you can collect! The complete rules are on page 100, April 1997 QST.

HAMS VOLUNTEER IN TEXAS FLOODING

Lee Besing, N5NTG, of Bexar (pronounced BAYur) County REACT in Texas reports that volunteers have been providing the American Red Cross with communication support during the South Central Texas Flash Flooding disaster. When Regan Wells, Texas, was cut off due to rising flood waters, the Red Cross put Amateur Radio to work to bridge the gap.

Using an ARRL Repeater Directory, Bexar County REACT president Alfred Fronefield, KC5VCF, located the nearest repeater in Uvalde, Texas, within 10 miles of the besieged town, and N5NTG used the Internet to track down the repeater trustee. Besing learned that it was part of an inter-city linked system, but trustee Larry Higgins, W5UQ, in San Antonio, isolated that segment of the link system and volunteered the full time use of it for the duration of the emergency. Higgins then contacted Greg Stone, KB5YUY, trustee of the Uvalde, Texas, site, who agreed to lend a hand on the scene and provide communication through the link back to San Antonio. There were no amateurs living in the affected area, so the REACT volunteers brought them in from the outside. All links were via 440 MHz.

As it turned out, no emergency aid was required via Amateur Radio. For more information, see http://react.stic.net.--Larry Besing, N5NTG

TWENTY METERS OPENS FOR QUEEN'S HAM RADIO DEBUT

As if by royal decree, a sluggish 20 meters suddenly opened between St John's, Newfoundland, and Bristol, England, on June 25 as Queen Elizabeth II became the first reigning British monarch to speak over ham radio. Paul Piercey, VO1HE, president of the Society of Newfoundland Radio Amateurs (SONRA), which arranged the transmission between VO500JC and GB500JC, said band conditions had been "quite poor" immediately prior to the event. "It was not known if the contact would be made," he said.

But when the appointed hour arrived, Piercey said, "it was almost as if the path opened up and, at 1801 UTC, the contact was made." The response from Martyn Phillips, G3RFX, on the Bristol side "was quite loud, despite the poor conditions," Piercey reported. He and Dan Goodwin, VO1MX, assisted the Queen on the Canadian end of the QSO, while Phillips, Cyril Chapman, G2HDR, and Robin Thompson, G3TKF, responded on behalf of the people of Great Britain.

The occasion was the 500th anniversary of the "Voyage of Discovery" to the New World by explorer John Cabot in 1497. VO500JC was located in Cabot Tower on St John's Signal Hill, which, in earlier times, served as a signaling post to announce approaching ships to the city's merchants. The VO500JC QTH also was just a few hundred feet from the site where Guglielmo Marconi received the first wireless transatlantic signal on December 12, 1901. The Queen referred to that accomplishment in her brief remarks over the air and added, "I am happy to know that Newfoundland and Labrador is still in the forefront of the communications industry and is working closely with other leaders in this field across the Atlantic."

SONRA is planning to host a celebration to mark the 100th anniversary of Marconi's historic accomplishment in December 2001.

On the Canadian side, the equipment used was a Kenwood TS-850SAT, a Heathkit SB-200 amplifier running approximately 400 W and a simple wire dipole about 20 feet above the Powder Magazine, an outbuilding which served as the shack. The UK group, operating from Phillips' home, used a Kenwood TS-950SDX into a Linear Amp UK amplifier with 400 W output to a 3-element tribander at 60 feet.--Paul J. Piercey, VO1HE/SONRA

FCC ADDS FORFEITURE GUIDELINES

The FCC has amended Sec 1.80 of its rules to incorporate, by reference, the Commission's forfeiture policies and schedule of forfeitures. The Compliance and Information Bureau's action "sets the framework for the forfeiture policy that will be part of the Commission's enforcement strategy" in the wake of FCC rules changes resulting from the telecommunications Act of 1996, an FCC announcement said. The Commission said the guidelines "seek to add predictability in the forfeiture amounts assessed for similar violations among different services." Adopting the forfeiture guidelines as a note to the rule allows the FCC to provide guidance on base forfeiture amounts "to all potential violators." The FCC acted June 19.--FCC

HAM NEWSLETTER COMPETITION ENTRIES SOUGHT

The Amateur Radio News Service (ARNS) seeks entries in its annual competition to identify and recognize "superior performance in Amateur Radio journalism" and to evaluate club newsletters "with suggestions for improvement."

The contest is open to all ham radio organizations, and membership in ARNS is not required to enter. Prospective applicants should obtain a contest entry form from ARNS by sending a business-size sase to ARNS President Lee Knirko, W9MOL, 11 S La Salle St, Suite 2100, Chicago, IL 60603-1302. General circulation magazines and professional journals are not eligible to enter.

Along with the application, contestants should send to Knirko one copy of any issue of a club newsletter published between July 1996 and December 1997. The deadline for entries is December 31, 1997. Early submissions are welcome and encouraged. Judges award points on general format, appearance, content, general interest and attractiveness. certificates will be awarded in the Superior, Excellent and Good categories, and club newsletter editors will get copies of the judging sheets and a summary of the newsletter's outstanding characteristics "as well as suggestions for improvement," ARNS says.--Jerry Boyd, K6BZ/ARNS

FCC SEQUENTIAL CALL SIGN UPDATE

The following is a list of FCC sequentially assigned call signs issued as of July 2, 1997.

Dist Group A Group B Group C Group D
Extra Advanced Tech/Gen Novice

0 AB0FW KI0JA ++ KC0BNX
1 AA1SI KE1IA N1ZOA KB1CEP
2 AB2DY KG2MA ++ KC2CDJ

Virgin Is ++ KP2CL NP2JR WP2AII
Puerto Rico NP3I KP3AY NP3PB WP4NNF

++All call signs in this group have been issued in this district.

SOLAR DOLDRUMS PERSIST

Sun watcher Tad Cook, K7VVV, in Seattle, Washington, reports: Solar activity is still very low. There was some disturbance from coronal mass ejections centered around June 27, and the planetary K index reached up to 4 and 5. Within a few days we were again seeing K indices of zero, signifying stable conditions.

Over the next month no notable solar activity is expected. Solar flux is expected to hang around the low 70s again. Recurring activity could appear July 6-8 in the form of coronal mass ejections, causing geomagnetic instability and a rise in the K and A indices. A recent Reuters wire service story quoted a London weather forecaster who observes solar activity. The report talked about dangers to satellite and communication systems from big solar flares, and quoted the forecaster saying that there would be a big disturbance between June 28 and July 3. So far nothing has appeared, and the news item stated that the forecaster does not divulge his methods.

A few years ago, Scott Craig, WA4TTK, wrote a PC freeware program for plotting solar activity. Now Scott has a new version 3.01, a 32-bit program for Windows 95, plus new updates for MS DOS and Windows 3.1. The really interesting and useful new feature in version 3.01 is the ability to automatically update the solar flux and sunspot number database when it scans new propagation bulletins. It pulls off the solar data at the bottom of this bulletin and updates the database automatically. Get it from WA4TTK's home page at http://edge.net/~scraig/.

Sunspot numbers for June 19 through 25 were 16, 23, 11, 15, 14, 14 and 34 with a mean of 18.1. 10.7 cm flux was 70.1, 70.2, 67.6, 69.5, 69, 69.9 and 71.7, with a mean of 69.7, and estimated planetary A indices were 10, 5, 3, 9, 7, 6, and 8, with a mean of 6.9.

Sunspot numbers for June 26 through July 2 were 23, 19, 26, 24, 0, 0 and 12 with a mean of 14.9. 10.7 cm flux was 71.8, 71.7, 71.2, 70.2, 69.8, 70 and 70.1, with a mean of 70.7, and estimated planetary A indices were 5, 16, 9,

11, 5, 4, and 4, with a mean of 7.7.

For any old bulletins to fill gaps in data, check on the ARRL website at www.arrl.org/w1aw/prop/1997-index.html.

IN BRIEF:

* This weekend on the radio: Venezuelan Independence Day Contest, SSB. See July QST, page 97, for details.

* No ARRL Letter on July 18: To accommodate vacation schedules, The ARRL Letter will not be published on July 18, 1997. Publication will resume July 25, 1997, with Vol 16, No 29.

* New H&K and Sourcebook available: Hints & Kinks for the Radio Amateur (14th ed) and The VHF Radio Buyer's Sourcebook now are available from ARRL Publications (888-277-5289; e-mail pubsales@arrl.org). The ARRL Operating Manual (6th ed) soon will be available. The newest edition features a bundled Ham Desktop Reference, with the most-used information and data in a convenient booklet.

* Insurance, reciprocal info on ARRLWeb: Brochures and applications for the ARRL equipment and club liability insurance plans now is available on the ARRLWeb page under the Regulatory heading. New reciprocal licensing information for Antarctica, Bosnia, Bulgaria, Cameroon, Ethiopia, Greenland, Indonesia, Norway, and St Kitts has been added to the RIB Web site, http://www.arrl.org/field/regulations/

* Ham radio goes Hollywood--redux: Universal Studios' movie version of Primary Colors could include some ham radio paraphernalia as "set dressing." The ARRL gave Universal permission to use a copy of QST in the electronics studio set of one of the characters in the movie, set for release in 1998. Primary Colors, based on the book of the same name, is the fictional account of a young governor's campaign to become President of the US. It will star John Travolta, Emma Thompson, Billy Bob Thornton, Kathy Bates, Adrian Lester and Maura Tierney. Mike Nichols will direct, and Elaine May wrote the film script.

* New Newsline Web site: Amateur Radio Newsline, produced by Bill Pasternak, WA6ITF, has a new Web site, http://www.arnewsline.org.--Newsline

* Canadian special event for Scout gathering: Thunder Bay, Ontario, hosts the 1997 Canadian Scout Jamboree--CJ97--from July 12 to July 20, 1997. More than 11,000 Scouts from Canada are expected to attend along with some 3000 volunteers and leaders. The Lakehead Amateur Radio Club will operate CJ3FW for the duration of the Jamboree. Operation will be on all bands and several modes. Thunder Bay area hams will be allowed to use the prefixes CJ3 or CK3 until July 31, 1997. The Lakehead Amateur Radio Club has a Jamboree Web page at http://www.tbaytel.net/srobb/cj97.htm.--Pat Doherty, VA3GD

* VE6KDA to operate for Klondike Days: The Radio Amateur Educational Society will operate VE6KDA July 16 to July 26, 1800 to 0000 UTC from the annual

Edmonton (Alberta) Klondike Days Exposition. Stations will be active on 80, 40, 20, 15, 10 meters, and on 147.12 MHz and 444.325 via the VE6RES repeaters.--David Clarke, VE6LX

* Chaverim International convenes: More than 100 members of Chaverim International from the US and Canada met June 6-8 in Ellenville, New York, for the organization's 11th annual convention. Dorothy Halpern, WA2IOR, won the "Man of the Year" award. Elected officers for 1997-98 were Maurice Rotheiser, K6AIZ, president; Jack Singer, AA2UL, vice president; Harold Bliss, VE3HBX, second vice president; Rita B. Simpson, WZ2W, corresponding secretary; Lloyd Kram, N2TNA, recording secretary; and Herb Holzberg, KU2B, treasurer. For more information on Chaverim International, an organization of Jewish radio amateurs and friends, contact Paul Kane, WA6WGP, e-mail wa6wgp@aol.com.

* New DARA officers: Gary DesCombes, N8EMO, is the new president of the Dayton Amateur Radio Association (DARA). Other officers elected include Ron Moorefield, W8ILC, vice president; John Phillips, N8ZGT, secretary; Beverly Priest, N8VZV, treasurer; Ken Allen, KB8KE, senior director, and Jim Ashman, N8KTU, junior director. All newly elected DARA officials took office July 1.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message

body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

Well personnally I think M@S@ is a trolling jerk but here's my one and only AES story,Milwaukee headquarters. In 1992 I moved into a townhouse sitiuation. I had rfi,so I grounded my 140S. That helped but no final solution. Since I was working alot of hours,16+ a day I decided to order The Bencher low pass filter and several snap on torroids for my neighbors. the filter was about a 100$ and the torroids were'nt bad.about 10$ for 4. This was the big Bencher,rated at 1500w PEP. Naturally,I ran a 100 watts through it! In 94 I hit it with 600 watts pep and it dead shorted to ground. Luckily I was watching the meters so my rig and amp were ok. It had a 5 year warranty so I called Bencher in Illinois. They told me too much power. I said 600 watts,it's covered for 1500. They told me quote "Too Bad,talk to AES". I called AES and refrenced my receipt # and recounted my spiel. They told me to contact Bencher,it's their warranty. I repeated my spiel. They then said there was nothing I could do nor that they could do. I said that I could take my business elsewhere,they said "Go for it". And I did,I've been dealing with Ham Radio Outlet in Atlanta for 5 years now and they have put their service and warranty commitment up front. They will beat most other prices and I am confident I will stay with them for the long haul. I will never deal with AES at all. For what it's worth. Jim KD4CDB

Stan King W4KR ex-W8POZ IS A CROOK ! WARNING !

This guy defrauded many hams in southeastern Michigan for a great deal of money. He is under court order to keep a current address on file at the circuit court in Ann Arbor, Michigan but skipped the state in December 1996. His callsign address is a mail drop in Florida and his drivers license is a fake address in Texas.

PLEASE HELP US FIND HIM. Please email me with any tip on his whereabouts. It's guys like this we don't need in ham radio.

Stan King W4KR ex-W8POZ IS A CROOK ! WARNING !

There is a small error in the above.

I, unlike you, have the courage to use my real name.

Burt

There is a small rubber plug by the steering column (firewall side)
that you can punch thru with an awl and presto, you have access to
run a cable to the battery. The rubber plug functions like a grommet
as its gummy consistency keeps it in place even after the stress and
strain of pulling a tight fitting cable thru the opening. I used
a small knife on the interior side to open things up a bit for
running the cable, starting on the interior side.

I have recently tried to change frequencies on my Motorola MT1000 and everything went O.K as far as i tried to read codeplug,but when i was about to program new frequencies to radio i received "serial bus error 003" (designating by manual batery low voltage or power failure) though my battery is full and display is lit,showing >>88<< and not being able to receive or transmit. Please any help.?

Re: Novice/Tech + restricted to 28.1-28.5

This is just more of the elitist, "caste-system" of ham radio that is being forced on us by YE OLDE FAHRTZ in the ARRL. There is no logical, legitimate reason why a Novice/Tech + can operate phone with 200 watts phone on 28Mhz, but cannot transmit 25 watts into a repeater on 29Mhz. Same band, same radio, same propagation. Just more nonsense which lends itself to class-warfare and discontent with amateur radio in general.

Would you like cheese with your whine?

Why don't you take the time to get the code exam passed for 13wpm and
QUIT COMPLAINING. You only have to get to 13 to work the repeaters up
there. You don't have to go all the way to 20wpm.

for the amateur equipments, AES is the biggest and greatest I think.

I ordered ADI's CPB262 (battery holder). I couldn't find it in other
stores at all. AES was the only one where had it in stock.

---
oh well... I don't think I should frame too much about one small
incident.

have a nice day.

Sorry Edward,

There is no law in any book anywhere that states one cannot purchase a
radio in this country (USA)......121 years old today. HAPPY BIRTHDAY
USA!!!

The only prohibition is operating the radio without a ticket. That is
not up to the "Sales Droid" to enforce. As a matter of fact, to
refuse to sell to someone is grounds for a discrimination suit other
things considered.

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Loking for Turner model 77 and 87 microphones, Sennheiser model 409 mics

Brands such as Neumann, AKG, Telefunken, UREI, Teletronix, Altec etc.

Especially interested in anything by Langevin and RCA.

The older the better, and basket cases are always welcome.

Thanks in advance.

I need the instruction book to assemble the Mosley TA-33 JR. Tribnander.

The entire antenna is disassembled.

If someone can help me out in any way, whether, by providing me witha
copy of the manual, or, dimensions of the elements, it would be deeply
appreciated. I will pay any copying costs or shipping costs.

Contact me via E-mail: w3ivg@prolog.net

Thank you ahead of time. Joe W3IVG.

kb8ydx@geocities.com (Adam Liette, KB8YDX), totally missing the point, writes:

>Why don't you take the time to get the code exam passed for 13wpm and
>QUIT COMPLAINING. You only have to get to 13 to work the repeaters up
>there. You don't have to go all the way to 20wpm.

That's a nice bit of pro-beeper propaganda, but it totally ignores my question of WHY the requirement exists. Again: why is 5WPM good enough for 200 watts voice but yet is not good enough for 25 watts or less into a repeater on the SAME BAND?

When the only reason for doing something is "because it's the rules", then it's time for the rules to be changed. Either that, or the rules will be grossly ignored because they are not deemed to be prudent and reasonable by the majority of citizens. The now-repealed 55MPH speed limit is a perfect example.

Such as a daytime only AM station, eh Drew? You are about the biggest loser I have ever witnessed on newsgroups. When you're not on the amateur groups whining about your inability to upgrade your license, your on rec.radio.broadcasting lying about your talents. I have listened to your little diatribe on RealAudio and let me tell you, YOU SUCK!! Quite frankly, I wouldn't be putting down the RS droids if I were you. An AM DJ has NO right to complain about people being senseless. Remember, your whole job is putting on some dumb fucking song from the 70's and telling everyone the time.

Brian

> response to this post will go unanswered by me.

And why is that? You've answered everyone so far my little monkey. My idea of a technical forum does not involve dropping code or all the other crap most people want to cry about today. And as far as radio or the net goes,it's a hobby. I watched these clown's flame on here for a long time now I'm jerking the little monkey's chains. If you don't see the humor in all this you take this hobby way too seriously. Life is a game;play to win.
Now as far as the other suggestion I'm game. I by no means an expert on Ham radio. I've only had a call since 91. But some subjects I have experience in or enjoy is HF propagation and antennas,new equipment releases,radio mods, stuff like that. But I am still learning, no one ever masters any thing. So if you have questions about those subjects I'll try to answer them. If I can't I'll say I don't know. And I think the guys on rec.radio.swap are getting sick of this boring thread so let's keep it in rec.radio.amateur.misc If you would like send the

question e-mail direct and I'll answer the same way. Have some packet experience. Worked with all forms of propagation in the military 1979-1992. So ask away,you want technical,we'll go technical. Fair enough?

The first thing to look at is ALL of the connections to your cable
control box, and to the television. Often a loose connection contributes
to the problem.

Looks like kb7uix had three strikes on this webpage,according to
Primenet, they'll never give him another one. A couple more Un-solicited
e-mails and they're going to drop him like a rock.But amsat loves the
little spock eared geek.

At least you got the freak part right. I wish I could take credit for that saying, but I saw it posted somewhere else after one of your pointless ramblings.
I did NOT claim that you couldn't pass the 5 wpm Morse test. I simply stated that you, for some reason or another, could not upgrade from your present status of Technician Plus. This is either due to you not being able to grasp the written information or your lack of CW copying ability. I would be inclined to bet on the former.
Now don't get me wrong. There is NOTHING wrong with being a Tech, coded or otherwise. What pisses me off is the fact that everywhere, at least the rec.radio.*** hobby groups, you are constantly bickering and moaning about how shitty ham radio is and how bad the system works. I think you are turning more and more people away from ham radio than ANY stupid Morse code "hazing" ritual.
I know a lot of no code techs who are excited about getting on the air. Once they get a taste of HF, Field Day, they want to jump in with both feet. A local 10 year old just passed his General. See what you can do Drew, if you would just shut the fuck up and study! You are one of those guys who feel that life owes them something. Well, life doesn't owe you shit. You have to get out and work for it.
If they did away with the Morse code, and they will, that would be fine by me. But, I live in the present. If you want the right to HF operation now, you will HAVE to learn the code.
You have rambled on before about freebanding. Now here you are, a licensed operator, condoning and promoting illegal activity. You are truly a hypocrite and an asshole.
For some reason, and I have yet to figure this out, you seem to love to troll along for flames. You must really love being at the center of attention. Probably comes from a deprived childhood.
If everyone out there would go to DejaNews.com and do a search for MNManiac you would see what I am talking about. What percentage of this idiot's posts are positive in nature, promoting the hobby of ham radio? Not too fucking many, i.e. none. This loser has started more of these stupid Radio Shack threads than I care to mention. Maybe RS wouldn't hire this complete social outcast. Smart move RS!!!
Lost your job at an AM station. Tough break. Freelancing on the internet not paying the bills? Well, keep your chin up, it can only get better.

Brian

By the way, I'm a dentist. I hope, for your sake, you don't ever end up in my chair!! Remember to brush and floss daily.

Dear Mr. Masa,

International Air/PP shippments must be hand carried to the Post Office
with appropriate customs forms filled out. The small delays are easily
offset by the price advantage compared to other carriers such as
UPS/FEDEX etc. The biggest disadvantage is that the International Postal
Union is no where near as streamlined as the commercial Air Carriers
regarding Customs. You package is probably stuck in that huge Customs
center in Burnaby, BC.

Electronic Supply).

It took them three days to respond to my order. I
didn't receive

the product. I called the office a week later. They told
me that

they placed the order and they needed someone to go to the post

office.

Now, they tell me that they don't have any records of my order.

I have received nothing. It's two weeks now.

Beware of AES.

Dear Mr. Masa,

International Air/PP shippments must be hand carried to the Post Office with appropriate customs forms filled out. The small delays are easily offset by the price advantage compared to other carriers such as UPS/FEDEX etc. The biggest disadvantage is that the International Postal Union is no where near as streamlined as the commercial Air Carriers regarding Customs. You package is probably stuck in that huge Customs center in Burnaby, BC.

If it was a bad cable tv amp carrying modulated RF signals, believe me you would recognize it immediately. I have a very sophisticated vhf/uhf monitoring system here in central Va., 125 ft. tower, dedicated antennas, pre-amps, etc. One day I started picking up very strong video hum and audio programing over the full range of primarily the high band vhf every 6 mhz...long story short..it took about a year but the problem was caused from a leaky cable tv trunk line amp about 500 ft. from my location. It was spewing RF like crazy. I determined that this was the cause by matching up the interference frequencies with the cable tv "homemade" channels. The amp was replaced and even though I still can hear the signals, the levels are insignificant and I can live with them. I doubt that your interference is originating in a bad cable tv amp, but anything seems possible in RFI.

Granted, that may have been the reason...but in doing so, they have
created a "caste-system" which pits lower license classes against higher
ones. "No-coders" are looked at with scorn by YE OLDE FAHRTZ instead of
being commended for their successful efforts in becoming a licensed ham.

How can this possibly be good for amateur radio as a whole?

>So if the FCC gave the exams the examiner must represent
>the government on all the issues?

Yep, as a government employee, he *is* speaking for the government when he makes a public statement pertaining to the field within the scope of his responsibility. If his statement doesn't conform to established government policy, he may be disciplined, up to and including termination, for misrepresenting the government's view.

Note this does not mean that a postal worker who flies the Nazi flag outside his home can be fired for that political statement. It is outside the scope of his duties as a postal worker. But he can be fired for expousing his Nazi propaganda in the guise of his role as a Postal worker.

That's a somewhat narrower standard than is generally maintained for someone working in a private capacity. Someone working for a private entity may be discharged for making public statements that reflect badly on that entity, even if those statements are about issues outside of the scope of his normal responsibilities within the enterprise.

Both government and private concerns have the right to disassociate themselves from individuals who consistently slander and misrepresent them via public statements. Freedom of association, particularly in voluntary activities, works both ways. You don't have to belong to a group that you despise, and similarly a group doesn't have to embrace individuals who despise and disparage them.

You consistently ridicule, disparage, and slander the amateur radio community in your public statements. You should not be surprised that the community in turn would spurn association with you. You've crossed the line of healthy criticism and entered the realm of hate speech. I don't believe even the government should have the power to squelch such speech, but it certainly doesn't have to grant it any credibility by maintaining a voluntary association with you, nor does any private entity.

388. HELP!!! Emperor TS5010 Needs Modulation & Power Mods!!!!!

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-05 00:00:00 UTC
From: postreply@newsgroup.com
Message-ID: <33bdef77.5944853@news.citilink.com>
Source record: 194253

Can anyone help me with improving the performance of my 5010?
It is sorely lacking in modulation and power on all modes.
I realize that the easiest thing to do would be to use an amp,
but that just not a possibility at this time, so doing the work
on the radio itself is my only option.
Thanks in advance.
swfalcon@citilink.com

P.S.
My power source, coax and antenna system
are all in perfect shape. The radio just
needs help.

Gee Drew, this happened in Mn and you have lived in 4-land since when?
It seems that this happened at least before 9/95 so why do you bring
this up now? Could it be that the sales person was denied the chance
to become an amateur radio operator because of the arcane telegraphy
requirement? Would you be upset if RS sold amplifiers to freebanders
and didn't check for an amateur license?

Didn't Shakespear write about the mnmaniac? "full of ... signifying
nothing"?

NOTICE

"CrACKeD!" has been taken offline by the
owner as of 5/8/97 due to heavy access as

well as other contributing factors from the mentally undeveloped population at large. What will emerge in the months to come will be a web site dedicated to technical radio-related topics which will attract a more mature audience. I'm still here, this site is still here, and neither will be going away. The style will certainly be changing though.

As for those of you who have always supported me and this site, I thank you for all you've done and I'm sure you'll visit in the future. As for those of you who have for whatever reason decided to leave me flames and threats, you'll probably find somewhere else to play once this site becomes too technical and specific to attract your attention.

If you've reached this site from a link on another site, please tell whoever provided that link to remove it. The name of this site, its URL and the content within it will no longer match what existing links reflect. If you would like to be notified by e-mail when my new site is online, then drop me a message with a subject line reading "notify me" and I'll mail you the URL when the time comes.

Update as of 06/20/97: New site layout is complete, but the content is going to take quite some time. I'm doing everything almost 100% originally and it's no quick or easy task. But, the result from all the work should be worth it. And PLEASE, would you people stop mailing me requests for software cracks? This site never was and never will be a resource for that sort of thing.

You may mail me at cracked@primenet.com.

DIVISIONAL NEWS

The Australian Communications Authority (formerly the SMA) is putting the register of all Australian Radiocommunications licencees (including Amateurs) on its World Wide Web page. All details will appear there, including the licencees' postal addresses, even if they have been suppressed in Amateur callbook.

Last Sunday the President announced that the VK2 Council had decided to obtain a special Post Box for those Members who did not wish to have their address shown on Internet. This is now in place and Financial Members who wish to take advantage of this Member Service should apply to the office for the necessary application form. On receipt of the completed form, and the nominal fee of $6, full details of Box No. and full

postal address etc. (which is totally different to our normal office Post Box) will be advised. The confirmation will also include a "tear off" portion to forward to the Australian Communication Authority (formerly S.M.A.) requesting amendment of the address listing. Mall received for those Members registered will be re-directed by the office.

NOTE: This special facility, which is only available to VK2 W.I.A. Members who have been duly registered, is for legitimate Amateur Radio correspondence - it must not be used as a general mailbox address for magazines, personal mail etc.

--submitted by Eric Fossey VK2EFY, Divisional Secretary.

AFFILIATED CLUBS NEWS

The next net is on Sunday 20 July, on 3.595 at 9.am.
Attention Affiliated Clubs and WIA members Nominations for the new quarterly VK2 division individual award have been called.

The theme for this quarters award is for Services to Amateur Radio.

Nominations should reach Amateur Radio House before 7 July, giving particulars that make this WIA member stand out so that Council can

make the correct choice at the July Council Meeting
The value of this quarters award is $40.00 awards are only for WIA members.

Members of council are excluded.

--Ken Westerman VK2AGW, VK2 division Affiliated Clubs Officer and Councillor responsible for Western and Riverina Areas of NSW

JULY TRASH AND TREASURE SALE

Start saving now- start packing up that equipment that's surplus to your needs!

The Trash and Treasure Sale to be held on 27th July will be held at the Dural transmitter site in Quarry Road. The Institute will be clearing surplus stock - plenty of it - and welcomes others to set up tables and car-boot sale points.

There will be a barbecue on site, and there is plenty of space to set upchairs and picnic tables. Bring the family.

We have not had a day out at Dural for many months - why not come along?

There will be more Information in the broadcast in coming weeks. Stay tuned!

--Pat Leeper VK2JPA Councillor.

Memebers of the Dural Technical Committee that your next activity at Dural will be on Sunday 13th July.

-- Tim Mills VK2ZT

WICEN NEWS

The Annual General Meeting will be on Saturday 9th August, at the Hornsby RSL Club, starting at 11am. It will be preceded by an RCOs' meeting, to appoint two Deputy State Coordinators. There will be a practical demonstration of the GRN system, and as an added inducement some door prizes will be given away, namely gift vouchers upon a well-known electronics retail chain and a year's membership of WICEN. Furthermore, Simon Trotter VK1AUS will be speaking on his experiences in RAYNET -- WICEN's equivalent in Great Britain -- and the ACT.

Are you concerned about the future of WICEN? Is WICEN doing a good enough job? How will WICEN be involved in the forthcoming Olympics? It's easy to control WICEN's destiny; all you have to do is fill out a nomination form, included in your newsletter. Remember, WICEN is composed of "Amateurs who care".

A new event on the WICEN calendar is the VRA Annual General Meeting, at Randwick, over the weekend of 27-28th September.

Saturday 12th July sees the running of the Colo Classic Endurance Ride, the communications for which is being organised by Blue Mountains WICEN. Three more operators are still required to cover all checkpoints, and a meal will be provided from the BBQ when operators complete their checkpoint. It is a 24-hour event starting at midnight on Friday, and checkpoints will be open for a maximum of 8 hours. If you would like to help out, please contact Neil Fallshaw, at work on (02) 9342-1589, at home on (047) 51-6449, or e-mail as "neil_fallshaw@optus.com.au".

The Central Coast AGM will be held on 25th July, at the Central Coast Rescue Squad Base, Rose St, Wyong, starting at 8pm.

The Hunter region will be providing safety communications for the "CanTeen Annual Troy Newman Cycle Trek" from Sydney to Newcastle on 27th July; the event co-ordinator is Pauline VK2GTB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

SPACE NEWS

MIR BACK ON AIR

Ham radio aboard the Mir has been getting some casual use again as the three-man crew continues efforts to get life back to normal aboard the Russian space station. General ham radio operation was suspended in the immediate wake of the mishap last week that damaged one of the Mir's compartments. But this week, US ham-astronaut Mike Foale, KB5UAC, expressed ''thanks for all your good wishes'' to hams around the world. The British-born Foale is using both 2 meters and 70 cm ''sparingly,'' according to SAREX Principal Investigator Matt Bordelon, KC5BTL. Werner Staubitzer, VO1CAT, in Pouch Cove, Newfoundland, reports he had ''a lengthy QSO'' with Foale over the weekend. Foale told VO1CAT that the crew was ''feeling fine and is making repairs to the damages as best they can while waiting for the required parts to arrive.''

Ray Webber, ZS6RSW, in Pretoria, South Africa, reports that he connected to Mir on packet (using the 145.800/200 split-frequency pair) on June 28.

Foale and his Russian cosmonaut crew mates again found themselves in crisis mode Wednesday, July 2, when the spacecraft lost attitude control. In a packet message to MIREX CEO Dave Larsen, N6CO, Foale related how, after the alarm sounded, ''we go rushing from one dark module to another, trying to look out windows, and point the solar arrays. The

station dies very quickly if we don't do this.'' Foale compared the situation to ''being on a yacht at sea, with the wind changing all the time,
and having to rush around pulling sails down, or putting them up, before a storm comes.''

Foale said the attitude failure has made the crew very wary of the next Progress rocket docking, set for Monday, July 7. ''Life on Mir is characterized by long periods of monotonous, serene calm, and short interludes of extreme frenzy, I am learning,'' Foale said.

The Progress rocket will supply cables and a special plate to fit over the hatch of the damaged Spektr science module. The crew will try to make cable connections to get the station back up to full power. Another Russian crew is scheduled to fly up in August to seal the leak and put the Spektr module back on line. Meanwhile, Foale and the cosmonauts are working on their new--but faulty--oxygen generator to get it back on line.

They are using incendiary candles to supply oxygen temporarily. Although the cosmonauts have begun practicing the repair routines, they and Foale still have a lot of time on their hands, and much of that is spent
in darkness to conserve electricity. This means Foale has time for hamming, and, so far, no one's objected to his using a few watts of power for the radio. While Mir remains a space station in trouble, Foale is providing Amateur Radio with an intimate view of the danger and drama. KB5UAC plans to operate frequently, whenever NASA and Moscow are not using their main communication channels. Look for him on 145.800 MHz, operating split. Occasionally, while Mir is over the US, you also may find him on 145.985 MHz (simplex).

To track the Mir spacecraft, check out http://liftoff.msfc.nasa.gov/temp/Mir_loc.html. The page presents a graphical representation of Mir's location and updates every minute.

(thanks to Roy Neal, K6DUE, for his contribution to this report)

--ARRL Space Bulletin 22, dated July 2, 1997

DX REPORT

CYPRUS - 5B4JE is active on SSTV. Also, look for 5B4/G4RHM during July.

GHANA - 9G1AA will be active until the end of 1997. He is working at the Dormaa Hospital.

UNITED ARAB EMIRATES - A61AQ has a daily schedule from 0000 to 0100z on 14240 kHz with his QSL manager N1DG. He is also active around 0800z on 15 meters, looking for JA and VK stations.

IRELAND - EI4VUJ will be active on all bands, from July 7 to 19. He will be located in Leitrim County, one of the rarest of the Irish counties.

GUADELOUPE - FG/F2HE will be active until September 25. His activity will be mostly CW.

SOUTH KOREA - HL0N/3 will activate Anmyu-Do Island, IOTA AS-080, until July 7. Look for CW and SSB activity on 40, 20 and 15 meters.

PERU - OA4QV will be active using the special prefix OA176 in commemoration of 176 years of Peru's Independence. He will be active until July 31, with Peru's Independence Day taking place on July 28. SSB operations will be on 40, 20, 15 and 10 meters.

ALAND ISLANDS - Several stations will be active as OH0/N4GN and OH0W until July 10.

MARKET REEF - After their stint from Aland Islands, this group will be joined by three other OH-stations and travel to Market Reef. The group is expected to arrive here late July 10. Look for activity from OJ0/OH1VR, and OJ0/N4GN. OJ0/OH1VE will be used during the IARU HF Championship contest (next weekend.) Besides activity on the HF and newer bands, there may be some 6 meter action as well.

AUSTRALIA - Special Event Station VI0ANARE will be active from July 1 through October 31 to mark the 50th Anniversary of ANARE, the Australian National Antarctic Research Expedition. Activity will be on 80 to 15 meters, using CW and SSB.

--ARRL DX Bulletin 29, dated 3 July, 1997

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

Our next meeting is on Wednesday, 16th July, when George Adams, VK2WEL, will explain how easy it is for amateurs to communicate via satellite. He will provide information on frequencies, equipment, antennas and software needed to get started. Doors open at 7:00 pm and the meeting starts at 7:30.

The next project day will be on Saturday, 2nd of August so come along from 1:30 onwards and see what we are up to. This is a good time to get advice on faulty rigs, see and operate the facilities at our shack and catch up with other members.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club, where a number of members gather for a meal before meetings. Anyone interested in amateur radio is welcome to come along.

--Simon Buxton, VK2EII, President

SUMMERLAND HAMFEST

The Summerland Amateur Radio Club's Annual Radio Hamfest, Garage Sale, Whatever will be on SUNDAY 3rd AUGUST, Commencing at 9.00 AM at the Clubrooms, 412 Richmond Hill Road, Goonellabah.
Plenty of pre-loved goodies, electronics and computers plus commercial

stands.

Refreshments, BBQ, Competitions, Fox Hunt ??.

Admission $2. Bring the family. Eyeball your old mates.

MANLY-WARRINGAH RADIO SOCIETY

The Annual General Meeting of the Manly-Warringah Radio Society will be held this coming Wednesday,. All members are invited (and encouraged) to attend, and of course to nominate for positions.

As usual, the meeting will take place in the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills. Doors open at 7:30pm for an 8pm start.

--Richard Murnane VK2SKY

THE ILLAWARRA AMATEUR RADIO SOCIETY , ADVISES ALL MEMBERS THAT THEIR JULY 8TH MEETING , WILL BE HELD IN THE MEETING ROOM , S.E.S BUILDING MONTAGUE STREET NORTH WOLLONGONG .

VISITORS ARE ALWAYS WELCOME . THE MEETING WILL START AROUND 7:30 PM .

THE SPEAKER ON THE NIGHT WILL GIVE A TALK ON SAILING FROM ENGLAND TO AUSTRALIA .

THE RAFFLE PRIZE WILL BE A MULTI METER , SO EXCHANGE YOUR TWO DOLLAR COIN FOR THREE RAFFLE TICKETS .

NOMINATION FORMS FOR CLUB COMMITTEE , WILL BE AVAILABLE ON THE NIGHT , AS THE A.G.M WILL BE HELD AUGUST 8TH MEETING .

FOR MORE INFORMATION RING BRIAN FARRAR ON (042) 672296 AFTER HOURS OR CALL VK2UBF ON THE "" BEST "" REPEATER IN NEW SOUTH WALES 146850 VK2RMP .

HOPE TO SEE YOU ALL THERE CHEERS BRIAN VK2UBF PUBLICITY OFFICER I . A . R. S

BLUE MOUNTAINS AMATEUR RADIO CLUB

The Blue Mountains Amateur Radio Club will be holding its July meeting next Friday night in hopefully the staff room but we are not sure, so stay

tuned. I apoligise to thoes who came to our June meeting and did not realise we had moved rooms. Next month we will thoroughly signpost where we are.

The July meeting will have no guest speaker as we will be having a general disscussion on the future direction of the club, so if you have any ideas or suggestions bring them along and have your say.

Supper is served half way through the night to alow a little face to face ragchewing.

This months Fox Hunt will be put back 1 week to the third Friday in July

as most of our hunters will be at the horse enduro on the normal night. Remember visitors are welcome and if you dont want to take part in the hunt come to the fox site and watch all the fun.

Most members can be contacted via VK2-RBM on 147.050 +600

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE GROUP WILL RE ON TUESDAY, 15 JULY AT AMATEUR RADIO HOUSE, PARRAMATTA.

THE MEETING WILL BE A SPECIAL WORKSHOP ON TEST EQUIPMENT AND CONSTRUCTION TECHNIQUES, LED BY RICHARD VK2ARS. SPECIAL EMPHASIS WILL BE PLACED ON CONSTRUCTION AND USE OF HOME BREW TEST GEAR.

DONT FORGET THE TUESDAY ACTIVITY NIGHTS ON 144MHZ AND OF COURSE THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM AT 11.00 AM.

SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

THE HORNSBY & DISTRICT ARC.

The next meeting is our informal get-together on Tuesday, July the 8 th. 1997. at 8:00 pm. in the Mount Collah Community Centre, Pierre Close, Mount Colah. (near the eastern entrance to the railway station.) Followed by the formal meeting on Tuesday July the 22 nd. 1997. At this meeting the guest speaker will be David VK2NH a councillor of the VK2 Division of the WIA. the talk will discuss what the VK2 Division is doing at
present and what it intends to do in the future. Visitors will be most welcome.

The training classes are now closed for this course. However feel free to phone Tony VK2BTL on 9497 3383 or John VK2WRT on 9807 2490 regarding future classes.

The Club conducts a net each Monday night at 8:00 pm. on VK2RNS.

frequency is 147.250 with a positive offset. Feel free to join in or if you
are a listener set your reciever to 147.250. We would like to hear from you, or better still we would like to meet you at one of our meetings.

If you would like more information about the Club, write to HADARC., Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490.

--John. W. Turner VK2WRT Publicity Officer.

The Annual General Meeting of the Liverpool & Distict Amateur Radio Club will be held at the Scout Camp on Cambridge Road Glenfield next Wednesday the 9th of July at 7.30 P.M. for a prompt 8.00 P.M. start. This is probably the most impoftnt meeting of the year, so if you are interested in how your Club is run, this is your chance to have your say.

The following Saturday the 12th of July is our annual Auction.
Goods will be checked in from 10 A.M. and buyers will be able to view the goodies from 11 A,M. The Auction will commence at 12 Noon sharp A sausage sizzle and drinks will be available as usual, so don't forget to retrieve some of that treasure from your shack that you no longer have use for: bring it along and don't forget your wallet

See you at the AG,M, and also at the Auction

The directions on how to get there are:

Cambridge Road runs off the Southern end of Moorebank Road (the road through Hoisworthy Army Camp). A LADARC sign will be placed near the road side in front of the entrance gate to the Scout Camp.

BROADCAST ROSTER

Next Sunday, 13th July 1997

Morning:
Announcer: Tony VK2TJF
Engineer: Richard VK2SKY

Evening:
Announcer: Peter VK2CZX
Engineer: Colin VK2HCT

If you would like to submit a news item for inclusion in the VK2 Divisional

broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to wiansw@sydney.dialix.oz.au

The deadline for submissions is 2pm on the Friday preceding the
broadcast; if sending by packet or Internet, please allow for forwarding
delays in the network.

If sending printed copy, please double space your text, leave wide
margins, and use a plain font such as Arial or Helvetica for clarity.
Please proofread your text, check your grammar and punctuation, avoid
using shorthand and abbreviations, and use the exact words you wish
the announcer to say on air. Remember, the more care you take in
preparing your news item, the better the announcer will read it.

Hi to all,
I very seldom post to this group, I am a 74 year
Young new Ham (female). I subscribed to this group
because I want to learn all I can on how to operate
my radio correctly and more on the theory.
Right now I m learning the code and find it fascinating.
I have pasted the Novice and Tech. and now I want to
get the +, then General. but I will not just memorize
the General test questions, I want to learn why I answer a test
question. To do so I must learn more about Operating
Procedures, Radio wave propagation characteristics.
Amateur station antennas and feed lines, Electrical principles
as applied to amateur, Etc.
So far I have found that 90% of the posters to this group
to be Rude, name callers and wantabes. This is not what
Ham radio is about. The other 10% are nice friendly intelligent
operators. It would be nice to cut down this group to that
10%.
BTW. I would like to thank all of you that has helped me in
the past.

I would estimate 90% of 10 mtr activity is 'packed' between 28.3 and
28.5.

> 40, 20, 15, then what Drew?
I initiated this thread,not Drew.My reasoning behind the suggestion
is simple,open all of 10 to anyone holding ANY class license because
no-one else is using it!
By the way,I hold an Advanced license and have since 1/91 so the
above proposal isnt for my direct benefit:<)

>Interesting coincidence if you ask me. I'd say 50/50
>your him. How better to deflect guilt than pretending
>to look for yourself. How clever! You must have a
>Phd too.

Hey Jimmy - I'm the KING OF RADIO. Any resemblance to Stan King's last name is a coincidence. And your logic that I am actually Stan King putting up wanted posters all over the internet to "deflect guilt" is, well, tenuous at best. I really don't understand how that works.

Vis-a-vis the "no name, no call" bit - I do not post using my identity so as to avoid hooking up personally with TOTAL ASSHOLES LIKE YOU. I used to post under my real name until I once made an innocuous comment that some guy interpreted to be "pro-code." I received a 2AM phone call at home demanding to know why I wanted to "kill the hobby." *That* was enough for me. I am a ham, Jimmy, but don't really want to get to know morons like you "up close and personal."

My post was made looking for information on finding the whereabouts of Stan King, W4KR ex-W8POZ. Any readers out there who have so much time on their hands that they want to verify the veracity of my statements may contact the Washtenaw County Circuit Court in Ann Arbor, Michigan and request a copy of the case number 94-3565-GC titled "Doty v. King."

>*at least* one regular contributor of on topic material.

There also seems to be some confusion about the purpose of the message in some circles, despite my best efforts to word the letter as politely as possible and point out that this is suggested, general advice, and not necessarily in specific response to the contents of the posting that triggered it. The letter does not say, "go away newbie," by any stretch of the imagination. Think of it instead as a sort of "welcome-wagon," analogous to the package one often gets when moving into a new neighborhood full of coupons and a directory of local businesses and organizations. You seem to imply that the message was sent to you by mistake. I assert that it was sent to you correctly, as the goal was to send the message to every rec.radio.amateur.misc poster once, and only once.

If I've truly chased you off the group, as you claim that I have with a very polite, ONE-TIME, welcome letter with new-user tips, then maybe you're not assertive and self-confident enough to participate constructively in this forum, anyway?

> It doesn't look to me like AutoSPAM has cleaned up this group at
>all. This doesn't prevent Paul from calling the program a success
>but he is seeking volunteers to continue the program to other
>newsgroups.

> When evaluating the success of the program, please do not base
>your judgement on the lack of complaints. Please look at the content
>of the newsgroup. It still contains as much trash as ever, and maybe
>even more. Has AutoSPAM cleaned it up? Not in the opinion of this
>former regular.

I would argue that some of the trash on this newsgroup would occur here anyway, and is the result of a very vocal, and inconsolable, minority (the last time I updated this newsgroup with my progress, at 2700

posters, I also included stats that showed that the overwhelming majority of posts to this newsgroup were from about 40 individuals). I don't believe that problem is solvable. The problem that I do believe is solvable is user ignorance about what kinds of information resources (FAQ's, Web Pages, organizations, etc.) are available to help participants in this newsgroup. Based on about a dozen explicit thank-you messages (and I would agree with you that each actual E-mail message probably represents many more unwritten ones, though I would hasten to point out that it works both ways), I believe this service also serves a very important purpose of making newcomers feel welcome (newcomers that would otherwise judge this forum by the trash of the above-mentioned minority).

Thank you for your feedback. If you noticed, I have taken to heart your earlier advice about it being too wordy, and have trimmed it down somewhat without sacrificing the most important information. These edits do not seem to have sacrificed its understandability, based on ongoing recipient feedback.

Hi all,

My homepage is getting bigger and will continue to do so until
Telenordia tell me I have run out of disk space on the server.
You cn find my homepage at:

http://user.tninet.se/~acz732k/

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)
250mW HF bands CW TX
4 watt PS for the above
5 watt CW TX - dead easy to build
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX
3 watt linear 1 - 30 MHz
Phasing method SSB exciter

500 watt linear amplifier
April 1st transmitter

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components
Stereo enhancement for HF CW
CW filters
Self tuning CW filter
Q-multiplier
CW keyer using 'relay logic'

DATA/INFORMATION
QRP frequencies
Measuring micropowers
Making PCBs, several methods
G0TLAs QRP circuit database on packet
Coil winding and 'turns' calculation.

DOWNLOADING
Signal generator program
All my QRP@WW circuits in a ZIP file
PCB foil for BUG TX (later version)
'Adult' screen saver

BREWING BOOZE
Brewing beer, wine and 'mash'
Distilling the mash (3 methods)
Making liquours

----------------------- and more -----------------------

I will be adding more to the homepage constantly, as long as
I have the time available to do it.

Have fun with QRP (and QRO) de Harry, SM0VPO, Upplands V&#65533;sby.

410. Experimental, Web-Based, Push-Media, "Elmer" Chat

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-05 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <33be8bd9.0@newscene>
Source record: 194275

If you have a Java-capable Web browser or Applet Viewer (and are not behind a firewall that blocks TCP sockets 2000 and up), you can access this experimental, Web-based, real-time "collaborative virtual workspace" for Elmers. Unlike other chat programs on the Web, where you have to repeatedly mouse-click to receive new data, this one is "push" oriented. Talk with fellow Elmers, and exchange Web URL's (which are caught and optionally displayed on the browser side). All message traffic on Elmer Chat is logged.

(Sorry, but Microsoft Internet Explorer does not work with Elmer Chat at this time.)

As with any experimental net service, particularly involving new technologies, use at your own risk.

Elmer Chat may be accessed from the home page of the Amateur Radio Elmers Resource Directory:

http://www.novia.net/~pschleck/elmers/

For further information about "push-media" technologies, see PointCast:

http://www.pointcast.com/

or WIRED:

http://www.wired.com/

Questions may be directed to me via my E-mail address below.

411. AutoFAQ Sent to Over 5100

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-05 00:00:00 UTC
From: don.phelps@infoway.com
Message-ID: <868125541@infoway.com>
Source record: 194276

Ps> Here's a breakdown of recipient's reactions to the letter over the
Ps> last 9 months. All feedback was politely replied to, usually with a
Ps> version of the rebuttal arguments given below:

What is going on? Did "Ps" appoint himself the moderator, pass his
own rules, mail his own letter, reply with his own canned rebuttals,
and declair himself the winner of the arguement?

It would seem to me, that a pole should be taken among the readers
of the newsgroup, after the founding documents of the newsgroup
have been posted and discussed. Then perhaps more than one person
volunteer to moderate & do a joint FAQ.

There is a lot of garbage in these rec.radio.amateur....groups that
are driving good people away. If we can find a real solution,
I am all for it. But single cannons are not likely to be the
most effective.

As to the FAQs suggested references, I think it should be remembered
that some people reading the newsgroup don't have more than
e-mail access to sending or searching the internet. So
references should be accessable by everyone, even those with only
e-mail.

With the info@arrl.org willing and able to maintain FAQs for each
rec.radio.amateur.... group, it seems to me, that resource
should be adequate for all these groups FAQs.

Personally, I would vote to have it be a moderated newsgroup
if there were volunteers to do the moderating, or at least
have a program do searches and eliminate the FS, make money,
sex, Burt Fisher, and the code posts from all but policy,
and then one could just unjoin that one group.

It is unfortunate that at this time when technology and multinational
communications presents opportunities to formulate new policy
and strategy, that the level of dialogue on policy is so low.

At first I read messages, then I scanned titles, now
notice names of groups. The signal to noise ratio needs to be
raised significantly on all the r.r.a...groups I read.

Why is it the pot stirrers like to flame and stir the pot and when they get the inevitable response then they whine and cry and say complain to the provider? Because they are gutless. These are the guys that don't put their calls in their posts,don't wear a namebadge to a hamfest afraid someone will slap them. They sit and listen to problem frequencies on hf for hours like little puppies with their nose pressed up against the glass. Then they complain to everyone about what they enjoy listening too. Little spineless geeks living vicariously through other people. Gerald Shit fits that to a "T".Complain Gerald,but you know deep down you wish you were me,you are green with envy. Complain all you want,but if you mess with the bull, you get the horns.

415. CBers on 10 meters?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-05 00:00:00 UTC
From: Keith Reynolds <hahah@aol.com>
Message-ID: <5pm2ho$d7j@news.toolcity.net>
Source record: 194280

We hams should band together and stop the non-licensed operators on 10 meters. I've noticed quite a bit of CB activity around 28.085 lately and we should put a stop to it before it gets out of hand. There's no excuse for them using 10 meters when it's obvious they have access to all of the frequencies below that into 11 meters. Anyone else have similar feelings about this?

Regards,
Keith - n3uux
email keith@toolcity.net

416. What the aRRL should have said

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-05 00:00:00 UTC
From: burt1@rocketmail.com
Message-ID: <868129052.13904@dejanews.com>
Source record: 194281
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

he following is what really should have been posted:

HAM RADIO SERVING AS EXTRA LINK DURING MIR CRISIS

For US ham-astronaut Mike Foale, KB5UAC, aboard the crippled Mir space station, ham radio is providing a valuable supplement to conventional Russian and NASA communication systems. However there were complaints from the Amateur Radio Relay League that non hams were using the ham equipment.
The aRRL said that even in a dire emergency a ham license is required to use a cherished ham frequency. In spite of aRRL pressure on NASA routine ham radio operation and school contacts have been canceled during the current Mir crisis, however.

As Bordelon related: "A hush fell over the room as Mir started its trek above the horizon. We didn't know if they would be on--power was down to 50% available and all nonessential equipment was turned off. The aRRL complained that ham equipent was essential as far as the ham community was concerned.

The aRRL said radio has a very high priority even when survival is the key, and power is critical on Mir,"

VOLUNTEER PROTECTION ACT OF 1997 SIGNED BY PRESIDENT

Ham radio volunteers stand to benefit from "The Volunteer Protection Act of 1997," signed into law June 18 by President Clinton. The measure aims
to provide Federal protection for hams from "meritorious"
lawsuits filed against individuals due to their incompetence as hams.

FCC SEEKS COMMENTS ON PETITIONS FILED TO AMEND AMATEUR RULES

* RM-9114, filed by James Cardillo-Lee, KE6VGV, Petaluma, California, asks that the Commission change the Amateur Service rules to permit hams who are emergency personnel engaged in disaster relief efforts to use ham radio frequencies while in paid-duty status. The aRRL was dead against anyone but aRRL employees being paid.

FORBES ARTICLE
HIGHLIGHTS HAM RADIO "MAGIC"

Readers of the July 7, 1997, issue of Forbes magazine won't find any sleight of hand in the article "There's No Magic in It," by James Clash, WA3JID.
The two-page feature talks discusses what it is about ham radio that's

kept the hobby alive when it "should have died with the advent of modern communications." The author admits ham radio died within the last 10 years as the average age of the ham is well over 50.

The article apparently put out the ham radio flame among readers, several of whom already have called the aRRL for more information about getting
out of the hobby on on to the Internet.

417. Those that respect the true ham

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-05 00:00:00 UTC
From: burt1@rocketmail.com
Message-ID: <868129137.13960@dejanews.com>
Source record: 194282
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Lets see....the question is "Would you want Burt Fisher to (be)
teaching your child". Well, I have visited his web page, and read
many of his postings. Burt seems to be a progressive-minded
individual, who is not afraid to raise questions about various
topics and issues, related to the radio hobby and others.
I don't know about you, but some of the better teachers of which
I had the pleasure of being instructed by all had the common
trait of not being afraid to leap beyond the stale material within
our tax-dollar-purchased-to-give-the-publishing-house-a-BIG-kickback
textbooks, and instead taught us how to THINK independently.
One Professor I very much remember would take a current news story
from the local paper and ask our opinions about it, then challenge us to
prove to him, each other and ourselves that what was printed was
indeed the truth, or just another opinion from someone else who
does not have a clue either. In about 80% of the cases, our research
proved that much of what was posted as news, was instead greatly
expounded upon by the writer of the article from the actual events.
Lessons taught: Do not be afraid to ask questions as much of what is
out there is pure bull---t. I see Burt in the same role as my former
Prof.
He seems to not be afraid to raise a question or gore a "sacred-cow"
within the stuffy and stodgy realms of the hobby called ham radio.
It's a darn shame there aren't more people like Burt as far as I'm
concerned, and not only would I welcome him teaching my kids, but
I feel he is qualified to hold a position on the Board of Directors of an
Ivy League university as well. Anyone who would ask questions or
challenge the status-quo in order to attempt to advance the field of
endeavor or study, and teach people to do the same, is a real teacher.

To Burt Fisher:

Hello Burt. I'm not a ham but have been following this thread
with some interest, as I have been a SWL since 68 and a CB
/ GMRS op since '74. Have listened to some HF ham stuff and
I understand that arrl is not the only game in town. Unless I'm
wrong is there not an exam group in Texas and another in Belmede
Lakes, Me who does testing?

As to your ongoing comments about H.R. I concur with much of you
observations, as I enjoy a unique perspective of being involved in E.E.
thus knowing the technology, but also not holding a ham licence, so
thus I can provide an "unbiased" observation(s) both live and during SWL
activities of the ham RF spectrum.(s)

Been to a few hamfests and a local ham club meeting. Their sort of like
going to a Unification Church or Scientology meeting. All these curious
people speaking to me about the ham radio hobby like it's something
akin to the Second Coming. One particular guy I chance'd meet at a ham
fest
in Maryland was so glub-damm pushy about ham radio being the best thing
since sliced
bread that he could've also been right at home handing out flowers and/or
Tracts in BWI Airport for Lyndon Larouche or Revrend Moon. Was trying to
speak with other folks and this short geek with 3 radios on his belt and
his
callsign on a stupid hat he was wearing wouldn't shut up or let others get
a
word in edgewise. (his yappin reminded me of a pekeneise puppy on
speed...Yip..Yip..Yip...Yip..!!) Why does ham radio seem to be a natural
magnet for screw-balls Burt? An honest question as I'm dumbfounded here.

Oh well, gettin off the topic. One final comment, you mentioned your
problems
with arrl management and your comments about the R. Palm and L. Hurder
"story". It is my understanding, from ham sources which seem somewhat
reliable, that the outcome between the 2 personages you mentioned was a
result of a 20 meter SSB issue which has been allegedly going on for a
number of
Years. I was told that this situation was becomming an "official
embarasment" to the
arrl and ham radio, and someone had to take the "fall" to save face. For
whatever
it's worth. Truth or bs, who knows? I've SWL'd up there myself and will

concur that
it is pretty bad, worse than some parts of CB radio in comparason.

Keep up the postings Burt, there are many more people reading them (and
the
replies) with much amusement.

>What is going on? Did "Ps" appoint himself the moderator, pass his
>own rules, mail his own letter, reply with his own canned rebuttals,
>and declair himself the winner of the arguement?

>It would seem to me, that a pole should be taken among the readers
>of the newsgroup, after the founding documents of the newsgroup
>have been posted and discussed. Then perhaps more than one person
>volunteer to moderate & do a joint FAQ.

Where have you been? There have been FAQ maintainers for this newsgroup for the past *SIX* years and have been doing quite nicely, thank you. There's also a moderated, information-only newsgroup with all of the radio-related FAQ's and bulletins, rec.radio.info, for the past *FOUR* years (voted into existence with a significant YES vote majority, and based on ample solicitation for feedback and subsequent discussion). Furthermore, calls for volunteers to assist have been repeatedly made and have largely gone unheeded.

If what you're saying above is that you would like to contribute as well, then you would be welcome. There are a number of undone tasks, and even moribound projects, that I could suggest. You are also free to do some of your own. You are also free to initiate dialog on this unmoderated newsgroup if you would like to gather feedback for, and help create, information resources different from what is being done currently. You're not saying that anything specifically that I've offered as information is incorrect, just that I have no right to claim that it's correct. I don't know how to respond to such a non-specific criticism.

You are right in that this isn't a moderated newsgroup. What that implies is that the community as a whole is responsible for this newsgroup. Some members of the community have chosen to do reasonable things that other newsgroups have done, including FAQ's and, most recently, an automated welcome-message service. We have sought consent and consensus as much as possible, but more often than not, we have been met with stone-cold silence. There's an old saying to the effect of "Lead, follow, or get out of the way." What is your choice?

>There is a lot of garbage in these rec.radio.amateur....groups that
>are driving good people away. If we can find a real solution,

>I am all for it. But single cannons are not likely to be the
>most effective.

As an individual who maintains an amateur-radio-related Web page (the Amateur Radio Elmers Resource Directory) that gets upwards of 400 page hits a day, and a welcome-message sent to over 5100 addressees with less than 1/2 of 1% negative feedback, permit me to respectfully disagree as to the effectiveness of "single cannons." I also strongly believe that any attempt at "rule-by-committee," or even rule by total consensus, is going to be hopelessly doomed to failure.

>As to the FAQs suggested references, I think it should be remembered
>that some people reading the newsgroup don't have more than
>e-mail access to sending or searching the internet. So
>references should be accessable by everyone, even those with only
>e-mail.

Agreed, which is why when John Seney and I advertise our information resources on the newsgroup (his FAQ, and my Elmers list), we include instructions about how to get copies via E-mail. My Elmers list is available via E-mail by sending mail-server@rtfm.mit.edu with the following in the BODY of the message:

send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff

John's FAQ is available via individual requests sent to:

john@wd1v.mv.com

with

HAM FAQ

in the SUBJECT of the message

>With the info@arrl.org willing and able to maintain FAQs for each
>rec.radio.amateur.... group, it seems to me, that resource
>should be adequate for all these groups FAQs.

I'm not sure what you mean by "[...] info@arrl.org willing and able to maintain FAQ's for each rec.radio.amateur.... group."

If what you mean is that the ARRL can provide diskspace on the Info Server for existing FAQ's, then yes, that is what they do currently. However, the files aren't always updated quickly enough to incorporate timely changes (my Elmers list changes significantly from

month-to-month, and John's FAQ also changes often enough for the Info Server copies to be somewhat out of date).

If what you mean instead is that ARRL staff members, as part of their regular duties, are going to put in the nontrivial amount of time maintaining, soliciting net feedback, and publishing FAQ documents for general Internet consumption, my understanding of the inner-workings of the League is that their paid, professional staff is way too strapped for time doing their regular duties to take on such open-ended burdens, paticularly when the benefits of such labor would seem to mostly consist of non-ARRL members. In particular, when Ron Klimas, WZ1V, asked the League to take over maintenance of his Ham WWW Links Directory, they specifically declined. Even if they accepted, I would be concerned about editorial autonomy. I have nothing against the League (I'm a member) in particular, just that I realize that no organization is going to fund something that could potentially criticize or be at odds with the organization. Volunteers not beholden to any organization have proven to be the most successful maintainers of information resources on the Internet.

If you have further specific information about ARRL plans (or even willingness) to maintain such FAQ's and make them easily accessible to all via the Internet (names, please), then please share such important information with the newsgroup.

>Personally, I would vote to have it be a moderated newsgroup
>if there were volunteers to do the moderating, or at least
>have a program do searches and eliminate the FS, make money,
>sex, Burt Fisher, and the code posts from all but policy,
>and then one could just unjoin that one group.

>It is unfortunate that at this time when technology and multinational
>communications presents opportunities to formulate new policy
>and strategy, that the level of dialogue on policy is so low.

>At first I read messages, then I scanned titles, now
>notice names of groups. The signal to noise ratio needs to be
>raised significantly on all the r.r.a...groups I read.

It all comes down to the multiple, almost intractable, problems of group apathy, "Tragedy of the Commons," the need for large-scale and ongoing user education (with a very high novice to expert ratio), and the 95/5 principles (both in that 95% of the positive contributions are done by 5% of the participants, and also that 95% of the negative contributions are done by another 5% of the participants). Based on six years of participation in these forums, I don't believe that there are any "silver bullets" to solve these problems, just lots of hard, ongoing, and thankless work.

It isn't necessary to thank me for any contributions that I've made. What I would ask is that I not be non-constructively criticized, especially by those who have sat on the sidelines.

Small + handy program, Address, can fill, read, and organise a
database. You can use it for any topics such as books, customers,
music, car, cd, parts, clients, etc... and makes as many different
databases as you like.
The extended search possibility of the program makes it suitable for
any application where many items need to be ordained and found in a
few seconds.
This program gives you the way to manage your collection of items
whatever their topic. This without the complication of big database
programs. You can start without any specific knowledge on the subject.
you just need a mouse... and visit:

http://www.xs4all.nl/~bernard/adhome_e.html

see you there,

427. Re: AutoFAQ Sent to Over 5100 rec.radio.amateur.misc Posters

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-05 00:00:00 UTC
From: kr4ah@bga.com
Message-ID: <5pk64e$1320$1@news3.realtime.net>
Source record: 194338

I find it hard to believe that there were only five other people who strongly objected to being sent mail by AutoFAQ (AutoSPAM). I guess it shows what sheep we have all become.

The post which generated the AutoSPAM was on topic and relavent to this group. I believe that any *human* moderator would have been able to see that. Until that time I posted here occasionally for several years and I read the group regularly for a good many years. Although Paul was polite in our e-mail exchange, I decided that posting here wasn't really worth the effort. So the AutoSPAM has lost this group *at least* one regular contributor of on topic material.

It doesn't look to me like AutoSPAM has cleaned up this group at all. This doesn't prevent Paul from calling the program a success but he is seeking volunteers to continue the program to other newsgroups.

When evaluating the success of the program, please do not base your judgement on the lack of complaints. Please look at the content of the newsgroup. It still contains as much trash as ever, and maybe even more. Has AutoSPAM cleaned it up? Not in the opinion of this former regular.

The Sonoma County Radio Amateurs will be packing up their radio
equipment and portable antennas and taking them on a Mini-DXpedition
OVERNIGHT to Alcatraz Island... THE ROCK!

The trip will be on July 26th and 27th. You can read more about it
and see just exactly what frequencies we will be operating on if you
check out the following URL:

http://cds1.net/scra/alcatraz.shtml

We will be offering either special QSL cards or Certificates. (We
aren't
sure which it will be at this time. You must send us a SASE to the
address on the URL. Also please make note of the operator's name you
talked with.)

Please look for us on the bands and we can help each other to make this
a successful mini-DXpedition! Thanks!

73,
Ken

Maybe some of the upper class licensees can get on and start doing CW on the freq., that may drive them away.

How many excuses do you have, Burt? Like, um, what's your excuse for posting this kind of crap?

I know it happens, but I've seen very little mention of 'Fat' being an issue in this group. Appearance certainly had nothing to do with my divorce. The biggest reason for divorce is that people begin to feel trapped and get restless. They get tired of living with someone who has become more of a brother or sister than a lover. They don't know exactly what to do about it or what they want, so they blame their spouse for their unhappiness (instead of acting as a team) and the marriage ends in a very sad puff of smoke.

Fat? Ha! It is to laugh...

Hi, Burt...long time, uh? Still on your one-note song. I like predictability from support people. (Gentle reminder that this is a *support* group, Burt...and most of us don't respond well to be attacked.)

However, as usual I would like to lend my support to Burt's postings...I have learned a lot about myself by paying attention to my responses to Burt, such as that I don't have to let his opinion affect me--he doesn't know me well enough to judge me!

>marriage ends in a very sad puff of smoke.

I disagree. I think the biggest reason for divorce is unmet expectations. I also believe the expectations were probably unrealistic.

Remember the movie *Sleepless in Seattle*? There's a great line in it, where Meg Ryan is watching a romantic movie (the truly weepy *An Affair to Remember*) and says she wants love like that, and Rosie O'Donnell replies *You don't want to be in love. You want to be in love in the movies.* This pretty much sums up my viewpoint on unrealistic expectations of relationships.

A hundred years ago, people formed their expectations of what relationships were like by observing the real-life situations around them...parents, grandparents, uncles and aunts, other people in their community. Some probably worked very well (i.e., both parties felt satisfied and even happy), and some didn't (there have always been broken marriages...it's just that in those days they mostly separated by abandonment, or stayed together and tortured each other with their bitterness).

Now we read novels and watch sappy movies and listen to love songs on the radio (admittedly they are mostly lust songs, but until fairly recently were cloaked in romantic language). And from these artificial depictions we construct an image of what a relationship is *supposed* to be like. And if ours doesn't measure up, it must not be *true love* so it's okay to abandon it.

Or, less often in my opinion, we learn enough to find out what we *really* want from the relationship (instead of accepting society's default definition of what it *should* be like) and discover we've married the wrong person, that they don't share our ideas or aren't able or willing to meet our geniune needs (instead of just fulfilling the societal definition).

Of course, Spew, you could extend that rationale to read "I can transmit
up to 100 watts on 3700, why can't I transmit 100 watts on 3925?"

>No. What I am opposed to and what turns off would-be hams is the
>illogical and outdated rules and hurdles that are necessary to obtain a
>license.

There is no serious, credible evidence (just a bunch of anecdotal evidence
posted by the anti-CW crowd) to suggest that a code test turns off
"would-be" hams. If you accept that argument as true, you can as easily
say that theory examinations also turn off "would-be" hams, with the same
level of "truth", because I'm sure if people actually bothered they would
find people out there who don't want to be bothered taking *ANY* kind of
test just to get on the radio and yack.

Now, some people have raised credible arguments regarding experimentation
and the use of newer technologies. These are legitimate claims; as one
of its purposes being a playground for experimentation, there should be
a minimal set of rules to restrict experimentation, and there should be a
quick and easy way to let people with new ideas experiment with them.
Rewording Part 97 to this effect would be positive. Perhaps some type of
"peer review" process for untested or developing technologies can be
implemented where people can try new things without waiting for years
until the FCC makes some obscure rule change. If the "anti-code" crowd
spent 1/2 of the amount of time they do complaining about the code
requirement working on this type of proposal, it would already be
in effect.

>Also, the attitudes of YE OLDE FAHRTZ who insist on keeping
>these rules, at the expense of growth and survival of the hobby, simply
>because "I had to do it, so they have to do it, too."

Well, if this ain't the pot calling the kettle black, to coin a phrase.
Spew is well known for his bigoted, racist views (a-la "lazy mexicans" and

"homosexuals" -- a search through the DejaNews archives will yield many such examples) Seems Spew is content with keeping his "rules" as they apply to how people should conduct their lives, but is pretty liberal with changing the "rules" when it comes to things he doesn't like.

>You miss the point totally. I'll say it again: Morse Code knowledge is
>irrelavent for the purposes of obtaining any government-issued radio

So is a great deal of the theory too. Shall we eliminate that too?

>You want me and others who believe as I do to simply "shut up" and accept
>things as they are, rather than fight to change them. Sorry. There are
>millions of hams of ALL license classes who feel as I do.

"millions of hams"? Last time I knew, amateur licenses numbered hundreds of thousands below one million, let alone "millions".

Or, are you counting all your CB "good buddies" as "hams" now, Spew?

Ah.... Now I begin to see the connection... All those "good buddies" want to get on amateur HF frequencies, but don't want to take a code test to do it. So, they've appointed you their own "HF for the masses!" spokesboy.

> We will not
>"sit down and shut up", bowing to the wishes of the ARRL and others like
>them who wish to keep HF locked up as their own private club, complete
>with Morse hazing rituals required in order to gain entry.

Its a big government conspiracy. Men in black, with black helicopters, come and take away your HF gear if you don't operate CW too, right?

>>You have rambled on before about freebanding. Now here you are, a
>>licensed operator, condoning and promoting illegal activity. You are
>>truly a hypocrite and an asshole.
>
>Just when I think we're beginning to have a civilized debate, you revert
>back to profanity and name-calling. Typical.

At least he pegged you right on the money. I'd use a descriptive term, though, rather than a ad hominum attack. How about "confessed criminal"?

>I am a realist. The reality of the freebanding situation is that there
>ARE thousands (if not millions) of active operators, the FCC is not going
>to and cannot make them disappear, and in fact, their numbers are growing.

An unfortunate side-effect of no rules enforcement. This will eventually change once people there begin to actively interfere with any other services which happen to be on those frequencies they use.

> Most of these operators are technically-knowledgeable folks who love
>radio and personal communications every bit as much as we do. Many of
>them would be ham operators if not for two reasons: the Morse code
>requirement and their (correct) perception that many (though not all) ham

>operators are "stuffy" and elitists who look down on anyone they consider
>to be "unworthy" of joining their little private club.

Too bad this just doesn't ring true. See, all these "technically-
knowledgable folks" would already BE amateur operators, with codeless
tech licenses, if they were really interested in amateur radio. If they
were interested in operating 10 meter voice, they would take the 5wpm
code examination, which is nothing more than rote memorization and a
table lookup.

However, they are not amateur operators, and never will be amateur operators
because they took the "easy" way out, and decided to break the law
(which is easier) rather than following the regulations and fulfilling the
requisite items.

>It is also reality that many hams are also active freebanders.

Oh, I'm sure there are "some", just like there are "some" people who are
total jerks on 75 and 20 meters. However, "some" does not equal "many".
Many implies a significant number, but even at 10%, there would have to
be 50,000+ "freebanders" who are also "hams", and I don't think anyone
has ever proved such a ludicrous claim.

>Because freebanding allows these hams to have fun, non-formal
>communications with other radio enthusiasts, away from the endless
>discussions about "my rig is, my antenna is, the weather here is", health
>problems, endless 10-10 contests, and other such nonsense that tends to
>make up the majority of contacts on the ham bands.

A contact on any band is what you make of it. If all you want to do is
talk about your gear and the weather, so be it. Thousands of other hams
get on and talk about other topics of mutual interest.

>If I were simply "trolling for flames", as you suggest, why would I have
>just spent a great deal of time stating my position and attempting to
>debate you in a civil and polite manner?

Because you had nothing else to do?

This is mostly correct, but in fairness to Ralph Brandi and his
colleagues in the other radio-related newsgroups, the rec.radio.*
hierarchy began with rec.radio.shortwave and rec.radio.noncomm. It was
only about two years later, in early 1991, that the rec.ham-radio.*
newsgroups joined this better, hierarchical namespace by renaming
themselves to rec.radio.amateur.*.

>hierarchy, you should subscribe to that group to get the periodic
>informational posts.

I don't want to leave the implication here that one needs to read "yet another newsgroup" to get the information that they seek. Furthermore, I'm not sure to which "vote" that Gary is referring, because to my knowledge, any such vote actually came to quite the opposite conclusion. All bulletins and FAQ's posted to rec.radio.info are also cross-posted to (with followups directed to) an appropriate, unmoderated discussion newsgroup in the rec.radio.* hierarchy (e.g., FAQ's are crossposted to *.misc, Space Bulletins to *.space, DX Bulletins to *.dx, Buying and Selling Guides to rec.radio.swap, etc.). This was in the original charter when the newsgroup was proposed in late 1992, and continues to this day in rec.radio.info's submission policies (I assume that this is the case, because the current moderator, Brian Short K7ON, has not stated anything that contradicts this, and almost all postings to rec.radio.info continue to be cross-posted). This implies that if there are FAQ articles relevant to a given newsgroup, then you will likely find them in that newsgroup, and not have to hunt for them elsewhere.

The basic reason why some of these very informative FAQ articles, describing both the rec.radio.amateur.* newsgroups, and appropriate suggested guidelines for buying and selling radio-related items in rec.radio.swap, are invisible is because they have gone unposted to ANY newsgroup for some time now. The maintainer does not respond to my E-mail, and the articles are essentially abandoned, though you can view the most recent copies at:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

There appears to be a wide-open opportunity for someone motivated to
take over maintenance of these articles and do them proper justice.
Any takers?

As always, not necessarily trying to beat up Gary here, it's just
convenient to follow up to his informative post with my two-cents :-).

This is a hot-button issue for me, as I'm currently getting raked over
the coals in rec.radio.amateur.misc by a small number of posters for
"playing moderator" with my (in my opinion) innocuous and
non-controversial new-user welcome letter. Despite the fact that no one
can seem to specifically criticize any of the contents, I've been
accused of being a loose cannon and operating contrary to the wishes and
consent of the newsgroup. In response to this, I have pointed out that
individuals like myself (as well as others) over the years have sought
consensus, support, and even team participation for various projects,
and such requests have largely gone unheeded. I'm doing what I feel is
objectively the right thing, and with the de-facto (by lack of
significant objection) consent of the newsgroup participants. I've also
been happy to consider polite feedback and incorporate constructive
suggestions. Individuals who disagree are welcome to make concrete,
practical, alternative suggestions (with the understanding that such
concrete suggestions often need concrete people to carry them out).

Over the years, suggestions about how to manage these newsgroups, and
improve their content, almost without exception have been along the
lines of:

"(Some indefinite third party, not me, who will magically drop out of the
sky) should..."

with the suggestions that follow the above preamble usually consisting
of one the following:

"...conduct polls to gauge newsgroup opinions about various things"
"...volunteer to maintain FAQ's"

"...serve on volunteer advisory committees"
"...create and manage moderated discussion newsgroups"

and then the matter gets dropped for want of such indefinite third parties. Furthermore, such suggestions usually ignore what is being done currently, as often the suggester clearly hasn't done sufficient research (for example, poll-takers, FAQ maintainers, and even an advisory committee for the rec.radio.amateur.* newsgroups do already exist). If you want to make the newsgroups better and more informative, you need to PERSONALLY get behind concrete projects to make it so, because (literally) no one else is going to do it. If you are sincerely interested, contact me or the rec.radio.amateur.* Working Group at rra-wg@theporch.com, and either volunteer, or ask us for suggestions about what would be good projects to do (resurrecting the above-mentioned dead FAQ postings would be a good start).

I found on several vehicles that in the absence of a factory plugged hole, punching a small hole (I use a #2 Phillips screwdriver) in the "boot" where the steering column passes through the firewall works nicely.

445. Trying to get Tech Class

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-06 00:00:00 UTC
From: luis@menudo.uh.edu
Message-ID: <5ponml$ear@menudo.uh.edu>
Source record: 194153

Newbie trying to collect info:

I am trying to get a Technician No-code (not yet) license and
would like to know what kind of radio to try and get for now - will
eventually take the code test so ideally the option to do packet would be
great on that radio.

Also the book I have :
FCC License Preparation No-Code Plus
Novice and Technician Class Theory

Has a comment that the Questions and Answers are only effective
up to June 30, 1997. How significant is this if I use it for the
exam(s)? Is there a new set of questions? A website? Tkx for any reply.

I have visited it. It does have some interesting stuff. But most people manage to use up one line of .signature with a pointer to their web site, in a total of 4 lines or less of .signature. Masa uses 16, and I don't see how all that extra text contributes any extra value to the reader. I'm sure it makes Masa feel better, though.

451. Ignition Noise Probs: suggestions??

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-06 00:00:00 UTC
From: Larry and Andrea Gagnon <gagnon@gagnon.u-net.com>
Message-ID: <33BFE816.BD@gagnon.u-net.com>
Source record: 194159

Hello. I have sever ignition noise problems in an older basic 1992 GM car (Vauxhall) here in Great Britain. It has 4 cyclinders, no electronic ignition, no fuel injection. The spark plugs are good new resistor types, the cables are quite new and in good condition.

The ignition coil sits near the battery to which my 12V line goes directly from the rig so it passes very close to the entire ignition system. I use an FT-2500M drawing 15 amps at 50wts out and an IC-735 which draws 20 amps so I need to go to the battery direct. At that amperage it would be difficult to build a DC line filter and probably wouldn't solve all the noise?

Any suggestions as to what I can do would be appreciated. thanks and 73's...Larry MW0AWC

> be a pain to reverse engineer the command strings, but we could. It would be
> nice if someone already had the information.

It would be nice indead :)

I have monitored the data trafic on the serial port between the FT50 and my PC
an was hopeing to find same commands like PEEK and POKE or anything useful.

But it is a damn protokol like:

ADMS: what are you ?
FT50: I am a USA version.
ADMS: here is same data for you, get ready.
FT50: Give it to me.
...
..
.

That are not commands like on the AR8000 or similar, just same HEX sequences
I could not use them :(

There are same usefull commands, that's for shure, after all that's the way YEASU
is probbably programming the FT50.

But I don't thing you can fing them by reverse engineering, they are not used in
the ADMS Software.

The only way (my opinion) to get them is to get them from YAESU, If you have writen
same nice program and want to implement control for the FT50 then YAESU will probably
help you :)

Greetings, Indi.

If you spent the time you currently spend in UseNet, you could upgrade
in a matter of months, if not weeks. You have no valid excuse other
than apathy or laziness for not upgrading.

If you don't care to upgrade, just say so. There's no need to come up
with lame excuses that no thinking person is going to accept.

Drew,

I don't understand why we have a "them and us" situation.The technicians that I know are first-class--involved in the clubs and community. Some will go on to upgrade others will not. It doesn't make a difference to me.

We had two come out to field day and they had a ball. Two more on the path to general! I guess it's just the changing population. Seems like nobody wants to work for anything, just want to have it all given to them--it's their right!

The idea for the 10 meter novice sub-band was to give the novices and technicians a place to get a taste of HF phone--when the band is open. Of course thet can run CW and digital from 28.1 to 28.2 as well.

I think we will see many changes over the next few years--most will be good, others...

Well, that's because rec.radio.amateur was split into topical groups
several years ago. The reason that it has seen no traffic is that it's
no longer a valid newsgroup. If it's appearing on your server, that only
means that your news administrator isn't doing his job.

[Pointlessly long .sig deleted.]

Considering that it's legal to sell an amateur transciever
to a non-licensed person, the store was perfectly correct in its
actions. In today's lawyer-happy society, it's to their benefit to
not require that a license be shown, since they probably don't want to
be sued for refusing to sell to a customer without a compelling *legal*
reason for the refusal.

For that matter, I never would have gotten into amateur radio if I
hadn't had access to a HF rig I bought from a local ham *before* I
got licensed. And guess what? I waited until I was licensed before
I ever transmitted with it. Why assume the worst about anyone else
who wants to check out the hobby? Now I'm playing around with
HF DSP modems, and may even "advance the state of the radio art", as
per our charter. I don't see any great need to fix something that
isn't terribly broken, save for a relatively small number of
cases that can be dealt with individually as they come.

475. Re: CBers on 10 meters?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-06 00:00:00 UTC
From: bb840@scn.org
Message-ID: <ECwzJy.54o@scn.org>
Source record: 194183

In a previous article, n7zzt@psn.net ("Eric Oyen") says:

>Keith,
>you are not the only one that feels this way. As a former CB operator (and
>now a ham), I have felt that too many activities on the 11 meter band have
>gotten too far out of hand. This business of modifying CB equipment to
>operate OUTSIDE of its designed capabilities causes us many more problems
>(interference, splatter, unlicensed users in our bands, etc.)
>
>Personally, I think the 11 meter band should be returned to amateurs for
>AMATEUR use only and to relegate all CB operations to the old service in
>460 MHz. Give them 440 kHz of spectrum there (for use with AM/SSB and FM).
>Perhaps then, we might dispense with the junk and splatter and the loads of
>QRM that occur on a daily basis all over the US.
>
The big problem with this is the existing operators will never stop using
their CB equipment, legal or otherwise, because they bought and paid for
it and no one can force them too. There are just too many radios out
there. The only way a take over of 11 meters could take place is if the
new service was the government or a commercial user with political clout
and money to pull it off. And the amatuer's have neither. Also, the new
service would have to flood the band with very high powered broadcast
service, RTTY, or something else that would make it impossible for the
current service to continue. This is all fantisy and aint gonna happen.

SB DX @ WW $OPDX.312
Ohio/Penn DX Bulletin No. 312

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 312
BID: $OPDX.312
July 7, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1DG, W1HIJ, N2OO, W2GD, WB2YQH and WB2RAJ from The 59(9) DXReport, NH6YK, K8PYD, K8XP, W0YG, DL8OBC, EA3CB, F6AJA, G4BUE & DX News Sheet, GM4SUC, HL1CG, HL1SSG, IK0AZG, IV3HYD, LA2IJ, RA3SL, SM3CVM, VE9AA and VK3EW for the following DX information.

3D2, FIJI. Ron, ZL1AMO, may be active once again July 6-8th as 3D2RW while on his way to Tarawa (T30) and possibly Banaba (T33). QSL via CBA.

4J, AZERBAIJAN (Attention YL Hunters!). The "DX News Sheet" reports that Oksana, 4J8YL, a YL operator, is active most days at 1400z on 20m (often 14198kHz) SSB.

5A, LIBYA. A group of four German operators will be on the air from the club station 5A1A in Tripolis, Libya. This operation will begin on approx. November 24, 1997, and last until December 4, 1997. During their stay, they plan to be a serious entry in the CQWW DX Contest as M/S category. Activity will be on all HF bands, including 160m and WARC bands (propagation permitting), with operations on CW, SSB, and, for the first time from Libya for many years, RTTY. The Germans will have two stations with amplifiers on the air simultaneously as often as possible. The operators will be: Andy/DJ7IK, Dieter/DL3KDV, Felix/DL8OBC and Thomas/DL1GGT. There will be a special WEB site set up for more details on this DXpedition (plus logs will be updated daily when operation is active). The WEB site is: http://www.afthd.th-darmstadt.de/5a1a/
The QSL manager (for this operation only!) will be DL3KDV. Please send your QSLs via the bureau to DL3KDV or directly to: Dieter Voss, DL3KDV, Friedrichsthal 21, D-51688 Wipperfuerth, Germany.

9M0, LAYANG-LAYANG ISLAND (Spratly Islands). Bob, N2OO, reports that he and Bob, N0RN, will take a side trip and break from their special event station activity (read down below) to be active from here August 14-18th. Operation is expected to be on 30, 20, 17 and 15 meters CW/SSB. There will

be two stations operational using beam antennas provided by Cushcraft. The license is confirmed, but the callsign is still being negotiated. The callsign will be announced at a later date. Upon completion of this operation, they will return to resume activity of their special event station 9M6HIL in East Malaysia.

A6, U.A.E. Don, N1DG, reports another new ham is on the bands from, this time, the Emirate of Sharjah. Abdullah, A61AQ, has some temporary equipment up and Don will be shipping him a monobander for 20 meters along with a linear amp. Abdullah already has antennas up for 15 and 10 meters. Don also states he will be Abullah's QSL Manager. Don can also provide cards for A61AD, A61AO and A61AQ, while his son handles cards for A61AF. Since July of last year, Don's address is: Don Greenbaum, 27 Pill Hill Lane, Duxbury, MA 02332 (Note: Next month Don's mail stops getting forwarded from his old address.) For those still needing A6, Don has as a daily schedule on 14240 kHz (+/- QRM) at 0000-0100z.

CY9AA ON QRT FROM ST. PAUL ISLAND. VE1PZ, K7BV and VE9AA arrived back in Pictou, NS, around 3:09 A.M. local time Friday. They started tearing down the stations at 6 A.M. Thursday, and the final thing to be dismantled was the 6 meters station. They made approx. 12,000 QSOs on 6m-160m, with around 275 on 6 meters (Best DX was CT3FT, W7RV and N5JHV). Remember, the callbook address for QSLs is not correct for VE9AA. The correct address is: Michael Smith, 271 Smith Rd, Waterville, Sunbury Co, NB, E2V 3V6, Canada

CY0, SABLE ISLAND. Jarek, VA3NCD (also SP8NCD), informs OPDX that he has just received authorization to land on Sable Island and was given a special callsign to use. He can use the callsign CY0NCD, during the period of August 9-22th. Jarek will be visiting the island between August 15 and August 17th. He will be equipped with an ICOM 751a and some simple antennas. The primary purpose for his visit is not radio, but just to explore the place (he has been thinking of doing this for a long time). He is actually taking more cameras and film with him than radio related things. Operations will be on 80/40/20/15 meters bands, mostly CW, at the bottom of the bands (7 kHz +/- QRM). He will take a microphone with him but doesn't plan to use it too much.

EI4, IRELAND (Rare county to be activated!). Leo, K8PYD, will arrive in Ireland on July 7 and will leave on the 20th. During that time, he will operate as EI4VUJ. Most of his operations will take place during the weekend of the 12th and 13th from the County of Leitrim, one of the rarest counties in Ireland. He will operate SSB, RTTY, and mostly CW. Check 14030 kHz. All QSLs go to K8PYD direct or bureau.

EU930, BELARUS. Igor, EU1EU, will be active until July 30th as EU930EU from Minsk. Activity will be on 160-2 meters with operations on CW, SSB, FM and RTTY. QSL via LY1BA (Box 67, Vilnius 2000, Lithuania) or QSL via EU1EU (ex USSR-HAM's).

FG, GUADALUPE. Juanjo, EA3CB, will be active as FG/EA3CB August 8-14th, from Guadalupe (NA-102) and August 15-17th, from Les Saintes (NA-114). Activity will be on 40-10 meters (including the WARC bands) with operations on CW and SSB (posible RTTY). QSL via the BUREAU.

HP, PANAMA (6 meters!). Gerard, F2JD/HP1XBI, is now active on 6 meters, and he will stay in Panama until October.

JU, MONGOLIA. Hyungsuk Song, HL1CG, has announced the following in a press release: "A group of Korean, Mongolian, and U.S. amateurs will be on the air at Danlanzadgad (Gobi Desert) in Mongolia from July 10-13th (Naadan Holidays in Mogolia). The DXpedition to Gobi Desert, Mongolia will be conducted by Korean DX Club (KDXC) and sponsored by The Korean Amateur Radio League (KARL), which is the IARU affiliated National League of Korea. Members of this joint DXpedition to Gobi Desert are Korean radio amateurs (HL1CG, HL1DK, HL1FB, HL1IE, HL1IFM, etc), Mongolian hams (JT1CD, JT1FBB, etc), and W6EE. The callsign JU4HL was issued for this operation, and CW & SSB will be operated on all HF bands including WARC bands. JU4HL plans to participate in IARU HF World Championship though it is not the purpose of this DXpedition. QSL cards must be sent direct or via bureau to 'Mr. Hyungsuk Song, HL1CG, Kaehwa APT #107-305, Banghwa-3-dong, Kangso-ku, Seoul 157-223, Korea'. Special photo QSL cards will be sent to all the stations who request their QSL cards. If it is okay to receive QSL card via bureau, you can send QSL card request via InterNet E-mail to 'hl1cg@stella.skku.ac.kr', in the body of which you must include your callsign and QSO data (Date and Time in UTC, Band, Mode, Report), 1 QSO a line."

KH4, MIDWAY ISLAND. Ted, NH6YK, reports there is now a 99.9% chance he will be on Midway from July 6 to August 20th or so. He will be working, but in between work and other fun things (like watching birds, snorkelling, star watching), he will be on the radio as NH4/NH6YK. His current plans for operatrions are: 28480 kHz (or so on 10M), 50.110 MHz slow CW for 6 meters, occasional 28.105 packet and possible U.S. novice band CW. There exists a slight chance of other bands (because he needs a few European contacts to finish his WAC from KH4). QSL via home call or bureau.

NORTHERN LIGHTHOUSE WEEKEND AND LIGHTHOUSE/LIGHTSHIP ACTIVITY WEEKEND. Over the past years, there seems to be growing interest by DXers to work lighthouses all over the world. Well, here is your chance to work a bunch of them. During the weekend August 23 and 24th, there will be two events taking place associated with lighthouses and lightships. The first event is The Northern Lighthouse Weekend when ten Scottish amateur radio stations will be established at lighthouses around Scotland. Running concurrent with The Northern Lighthouse Weekend is the Lighthouse/ Lightship Activity Weekend when amateur radio stations will be established at lighthouses/lightships around the world. ADDED NOTE: Complete details of these events and information on the lighthouses/lightships will be provided to all OPDX InterNet Subscribers as an additional bulletin.

QSL INFO AND NEWS.....
Hamad, 9K2HN, states that all 9K out going bureau cards have been sent out recently. Those who have been waiting for bureau cards from

Kuwait should have their cards in hand soon. This includes more than 1000 QSL cards from Hamad to DL's hams for the years 94,95 and 96.

QSLs for HS0/SM3DYU is via SM3CVM, bureau or CBA. QSL cards are printed, and some have already been distributed. QSL for HS0/SM3CVM (operation Nov 25-26 1995) is via SM3CVM bureau or CBA.

Nicola, IV3HYD, reports he is the QSL Manger for the special callsign of IR3A. QSL via bureau or via direct to: Nicola Corvino, P.O.Box 12, 33034 Fagagna, Udine, Italy.

Deal, BA4TB, reports the following addresse can be used for BG4TBD, BD4TB and BA4TB: 9A2AJ, P.P., 34551 LIPIK, CROATIA. Also for BA4TB the following address can be used: F/HH2HM, P.O. Box 104, 22650 PLOUBALAY, FRANCE

Jack, F6BUM, states he has answered all direct QSLs for the 6W2/F6BUM activity from Karabane Island.

OX, GREENLAND. Jorgen, OZ8AE, will be active from here July 11-23rd. He plans to sign OX/OZ8AE from Groennedal. Operations will be QRP on CW. Suggested frequencies are: 7019, 10115, 14041, 18086 and 21041 kHz. QSL to CBA.

P40, ARUBA. John, W2GD, will operate P40W during the IARU Radiosport, CW ONLY, Single/Op, all band and high power entry. Activity will be July 9 through July 13, 1997. QSL only via N2MM.

SPECIAL EVENTS...
Special event station IR0MFP and several other stations qualified for the "Diploma of Millennium" will be active July 14-15th.

Bob, N2OO, the Special Event callsign 9M6HIL will be used from August 5-24th from the Hillview Gardens Resort in Keningau, Sabah, East Malaysia, to celebrate the resort's opening (Refer to OPDX.310). Operators will be Bob/N2OO/9M6OO, Bob/N0RN, Alan/VS6KY/ZL1TX, and a number of local 9M6's. Although it is getting late, anyone interested in joining them for this Special DXpedition can E-mail Bob for further information at: CQPINEY@worldnet.att.net.
Also, please note that the permanent callsign for the resort will be 9M6A for all subsequent operations. All QSLs for both 9M6HIL and 9M6A will go via N2OO. Updates are in progress on the Hillview Gardens web page and can be found at: http://www.idis.com/alfons/hill.html

TF, ICELAND. Ove, LA2IJ, states he will be active on RTTY as TF/LA2IJ from July 21-27th. His main operating frequency will be 14083 kHz. Also, he will possibly be on 21083 and 7037. There will be some SSB operations on 14177 (and maybe 21277 and 7077). QSL via LA2IJ direct to CBA or via the bureau.

THE DELTA DX ASSOCIATION in New Orleans voted in June the following new officers: President - Don Boudreau, W5FKX; Vice President - Bruce Stevenson, K5HAA; Secretary - Shelby Smith, W5SNU; and Treasurer -

Stan Pulitzer, W5JYK.

TK, CORSICA. "The 59(9) DXReport" states that IK0XBX will be active from here as TK/IK0XBX/P from July 12 to July 26 or 28. QSL via homecall.

V5, NAMIBIA. Charlie, W0YG (ex-KY0A) reports to OPDX that he plans to be active from V5 again in a month as ZS6TG. However, there is so much confusion over bureau cards from his last operation (in receiving cards from the ZS and W0 bureaus), that Charlie states he does not want any bureau cards from this operation. He now only wants cards sent direct to W0YG at: 6746 North Yucca Trail, Parker, CO 80138. Charlie will be mobile with 500 watts and plans to be active again on 160/80 meters. He may also be active from A2, Z2 and other places.

VK3 AUSTRALIAN QSL BUREAU HAS A CHANGE OF ADDRESS. Barry, VK3XV, Chief Executive Officer of WIA Victorian Division, reports the mailing address for all cards for VK3 WIA members and others has changed. All cards from overseas countries should be addressed as follows: WIA VICTORIA, INWARDS QSL BUREAU, 40G VICTORY BOULEVARD, ASHBURTON. VIC. 3147. Cards addressed to the current address of "BOX 757G GPO MELBOURNE" will continue to be collected and distributed until December 31, 1997, to enable the changeover. QSL Managers should note that this is the IARU endorsed bureau for all VK3 cards. Bureaus in all overseas countries will be notified of the change by direct mail.

VP5, TURKS & CAICOS ISLANDS. Look for Carlo, I4ALU, to be active from here August 12-24th, as VP5/I4ALU. Operations will be on all bands, but CW only. QSL via homecall.

VR6, PITCAIRN ISLAND. "The 59(9) DXReport" states that Betty, VR6YL, is active on 14176 kHz at 0300z.

ZK1, NORTH COOK ISLANDS (DXpedition Update. Tom, K8XP, provided the following update: "Several members of the Dateline DX Association met in Charlotte, NC, to assemble and test equipment in mid June. All eqiupment was packed and shipped to Oakland, CA, where it was to be loaded on a vessel departing June 30th bound for Rarotonga, South Cook. Licensing and other arrangements are completed and N1DG is finalizing the Web site. On-line log checking will be tested in the near future for implementation during the operation. N4RF, N7RO, WA4YBV, N6MZ, ZS8IR, KI6AN and K8XP will meet at LAX on September 17th for departure to Rarotonga with arrival on the Island of Penrhyn in the North Cook Group on the morning of September 20th. Operation with the call ZK1XXP will last 7 days with 3 or more stations on 3 modes. Primary goals are low bands, Europe and East Coast North America. QSL information to be announced. Any questions or information can be forwarded to K8XP at "K4TSJ@juno.com"."

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative >themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.
SEND TO: Photo Phoenix International

- --- BEGIN Linux AX25 HOWTO part 1/3 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v1.4, 20 June 1997

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25, NetRom and
Rose support for Linux. A few typical configurations are described
that could be used as models to work from.

The Linux implementation of the amateur radio protocols is very
flexible. To people relatively unfamiliar with the Linux operating
system the configuration process may look daunting and complicated. It
will take you a little time to come to understand how the whole thing
fits together. You will find configuration very difficult if you have
not properly prepared yourself by learning about Linux in general. You
cannot expect to switch from some other environment to Linux without
learning about Linux itself.

1.1. Changes from the previous version

Additions:
Added the section missing from the BayCom configuration section.
Added 'hdlcdrv' to the list of modules needed to 'insmod' for BayCom.
Added Rose Uplink and Downlink configuration - thanks Rick

Corrections/Updates:
Added kernel compile options into low level configuration section.
```

Removed that nasty axctl error.
Many small changes here and there to the BayCom and SoundModem sections.
Hopefully I've unconfused the kernel/tools issue.
Updated the home ftp site.

ToDo:
Fix up the SCC section, this is probably wrong.
Expand on the programming section.
Add some references to AX.25 and NetRom source documentation.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that relate to Linux networking in more general ways and I strongly recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/HAM-HOWTO.html>,

the NET-3-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/NET-3-HOWTO.html>,

the Ethernet-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Ethernet-HOWTO.html>,

and:

the Firewall-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Firewall-HOWTO.html>

More general Linux information may be found by reference to other Linux HOWTO <http://sunsite.unc.edu/LDP/HOWTO/> documents.

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. The Packet Radio Protocols and Linux.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25. The NetRom protocol features dynamic routing and node aliases.

The Rose protocol was conceived and first implemented by Tom Moulton W2VY and is an implementation of the X.25 packet layer protocol and is designed to operate with AX.25 as its datalink layer protocol. It too provides a network layer. Rose addresses take the form of 10 digit numbers. The first four digits are called the Data Network Identification Code (DNIC) and are taken from Appendix B of the CCITT X.121 recommendation. More information on the Rose protocol may be ontained from the RATS Web server <http://www.rats.org/>.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom and Rose support and is now the developer of the AX.25 related kernel code. DAMA support was developed by Joerg, DL1BKE, jreuter@lykos.tng.oche.de. Baycom and SoundModem support were added by Thomas Sailer, <sailer@ife.ee.ethz.ch>. The AX.25 utility software is now maintained by me.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems. Thomas's new soundmodem driver supports Soundblaster and soundcards based on the Crystal chipset.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

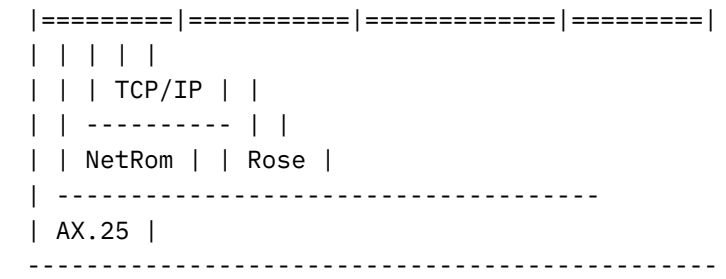
3.1. How it all fits together.

The Linux AX.25 implementation is a brand new implementation. While in many ways it may looks similar to NOS, or BPQ or other AX.25 implementations, it is none of these and is not identical to any of them. The Linux AX.25 implementation is capable of being configured to behave almost identically to other implementations, but the configuration process is very different.

To assist you in understanding how you need to think when configuring this section describes some of the structural features of the AX.25 implementation and how it fits into the context of the overall Linux structure.

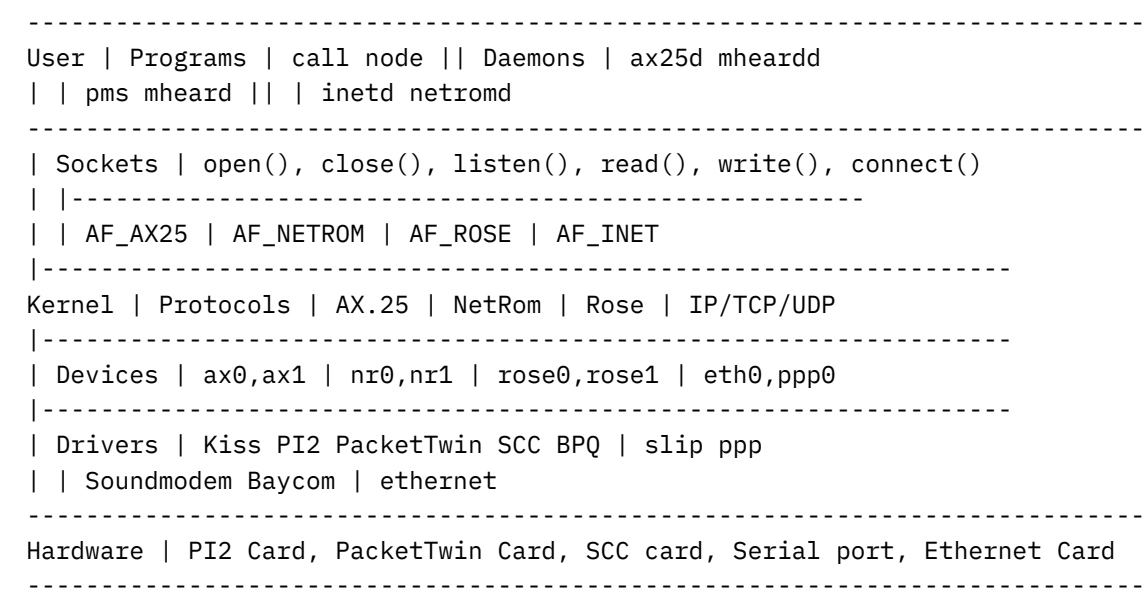
Simplified Protocol Layering Diagram

```
-----------------------------------------------
| AF_AX25 | AF_NETROM | AF_INET | AF_ROSE |
```



This diagram simply illustrates that NetRom, Rose and TCP/IP all run directly on top of AX.25, but that each of these protocols is treated as a seperate protocol at the programming interface. The `AF_' names are simply the names given to the `Address Family' of each of these protocols when writing programs to use them. The important thing to note here is the implicit dependence on the configuration of your AX.25 devices before you can configure your NetRom, Rose or TCP/IP devices.

Software module diagram on Linux Network Implementation



User | Programs | call node || Daemons | ax25d mheardd
| | pms mheard || | inetd netromd
Sockets | open(), close(), listen(), read(), write(), connect()
AF_AX25 | AF_NETROM | AF_ROSE | AF_INET
Kernel | Protocols | AX.25 | NetRom | Rose | IP/TCP/UDP
Devices | ax0,ax1 | nr0,nr1 | rose0,rose1 | eth0,ppp0
Drivers | Kiss PI2 PacketTwin SCC BPQ | slip ppp
| | Soundmodem Baycom | ethernet
Hardware | PI2 Card, PacketTwin Card, SCC card, Serial port, Ethernet Card

This diagram is a little more general than the first. This diagram attempts to show the relationship between user applications, the ker&#65533;nel and the hardware. It also shows the relationship between the Socket application programming interface, the actual protocol modules, the kernel networking devices and the device drivers. Anything in this diagram is dependent on anything underneath it, and in general you must configure from the bottom of the diagram upwards. So for exam&#65533;ple, if you want to run the call program you must also configure the Hardware, then ensure that the kernel has the appropriate device driver, that you create the appropriate network device, that the ker&#65533;nel includes the desired protocol that presents a programming inter&#65533;face that the call program can use. I have attempted to lay out this document in roughly that order.

4. The AX.25/NetRom/Rose software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. These have been significantly enhanced in the 2.1.* kernels. Unfortunately, the rest of the 2.1.* kernels makes them fairly unstable at the moment and not a good choice for a production system. To solve this problem Jonathon Naylor has prepared a patch kit which will bring the amateur radio protocol support in a 2.0.28 kernel up to the standard of the 2.1.* kernels. This is very simple to apply, and provides a range of facilities not present in the standard kernel such as Rose support.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/linux-2.0.30.tar.gz

The current version of Jonathons upgrade patch is available at:

ftp.pspt.fi

/pub/linux/ham/ax25/ax25-module-14b.tar.gz

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.33.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

There are two different families of AX25-utilities. One is for the 2.0.* kernels and the other will work with either the 2.1.* kernels or the 2.0.*+moduleXX kernels. The ax25-utils version number indicate the oldest version of kernel that they will work with. Please choose a version of the ax25-utils appropriate to your kernel. The following are working combinations. You must use one of the following combinations, any other combination will not work, or will not work well.

Linux Kernel AX25 Utility set	
linux-2.0.29	ax25-uitls-2.0.12c.tar.gz
linux-2.0.28+module12	ax25-utils-2.1.22b.tar.gz
linux-2.0.30+module14	ax25-utils-2.1.42.tar.gz
linux-2.1.22++	ax25-utils-2.1.22b.tar.gz
linux-2.1.42++	ax25-utils-2.1.42.tar.gz

The AX.25 utility programs can be found at:

ftp.pspt.fi <ftp://ftp.pspt.fi/pub/linux/ham/ax25/>

or at:

sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

5. Installing the AX.25/NetRom/Rose software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# tar xvfz linux-2.0.30.tar.gz
# tar xvfz /pub/net/ax25/ax25-module-14b.tar.gz
# patch -p0 </usr/src/ax25-module-14b/ax25-2.0.30-2.1.42-5.diff
# cd linux
```

After you have unpacked the kernel source and applied the upgrade, you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make menuconfig
```

You might also try:

```
# make config
```

I'm going to describe the full screen method (menuconfig) because it is easier to move around, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Code maturity level options --->
...
[*] Prompt for development and/or incomplete code/drivers
...
General setup --->
...
[*] Networking support
...
Networking options --->
...
[*] TCP/IP networking
[?] IP: forwarding/gatewaying
...
[?] IP: tunneling
...
[?] IP: Allow large windows (not recommended if <16Mb of memory)
...
[*] Amateur Radio AX.25 Level 2
[?] Amateur Radio NET/ROM
[?] Amateur Radio X.25 PLP (Rose)
...
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[?] BAYCOM ser12 and par96 driver for AX.25
[?] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
[?] Serial port KISS driver for AX.25
[?] BPQ Ethernet driver for AX.25
[?] Gracilis PackeTwin support for AX.25
[?] Ottawa PI and PI/2 support for AX.25
[?] Z8530 SCC KISS emulation driver for AX.25
...
```

The options I have flagged with a `*' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what other options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able
to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

maake sure you move your arch/i386/boot/zImage file wherever you want
it and then edit your /etc/lilo.conf file and rerun lilo to ensure
that you actually boot from it.

5.1.1. A word about Kernel modules

I recommend that you don't compile any of the drivers as modules. In
nearly all installations you gain nothing but additional complexity.
Many people have problems trying to get the modularised components
working, not because the software is faulty but because modules are
more complicated to install and configure.

If you've chosen to compile any of the components as modules, then
you'll also need to use:

```
# make modules
# make modules_install
```

to install your modules in the appropriate location.

You will also need to add some entries into your /etc/conf.modules
file that will ensure that the kerneld program knows how to handle the
kernel modules. You should add/modify the following:

```
alias net-pf-3 ax25
alias net-pf-6 netrom
alias net-pf-11 rose
alias tty-ldisc-1 slip
alias tty-ldisc-3 ppp
alias tty-ldisc-5 mkiss
alias bc0 baycom
alias nr0 netrom
alias pi0a pi2
alias pt0a pt
alias scc0 optoscc (or one of the other scc drivers)
alias sm0 soundmodem
alias tunl0 newtunnel
alias char-major-4 serial
alias char-major-5 serial
alias char-major-6 lp
```

5.1.2. What's new in 2.0.*+ModuleXX or 2.1.* Kernels ?

The 2.1.* kernels have enhanced versions of nearly all of the
protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you

can insmod and rmmod them whenever you wish. This reduces the
kernel memory requirements for infrequently used modules and
makes development and bug hunting much simpler. That being said,
it also makes configuration slightly more difficult.

All drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin
etc now present a normal network interface, that is they now
look like the ethernet driver does, they no longer look like
KISS TNC's. A new utility called net2kiss allows you to build a
kiss interface to these devices if you wish.
bug fixed
there have been many bug fixes and new features added to the
drivers and protocols. The Rose protocol is one important
addition.

5.2. The network configuration tools.

Now that you have compiled the kernel you should compile the new
network configuration tools. These tools allow you to modify the
configuration of network devices and to add routes to the routing
table.

The new alpha release of the standard net-tools package includes
support for AX.25 and NetRom support. I've tested this and it seems to
work well for me.

5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions
there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.33.tar.gz
# cd net-tools-1.33
# make config
```

At this stage you will be presented with a series of configuration
questions, similar to the kernel configuration questions. Be sure to
include support for all of the protocols and network devices types
that you intend to use. If you do not know how to answer a particular
question then answer `Y'.

The tools will compile cleanly against the source after you remove the
first line "usage und man page, info text von alexey" from the file
arp.c.

When the compilation is complete, you should use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the
latest firewall administration tool ipfwadm. This tool replaces the
older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user and utility programs.

After you have successfully compiled and booted your new kernel, you
need to compile the user programs. To compile and install the user
programs you should use a series of commands similar to the following:

```
# cd /usr/src
# tax xvfz ax25-utils-2.1.42.tar.gz
# cd ax25-utils-2.1.42
# make config
# make
# make install
```

The files will be installed under the /usr directory by default in
subdirectories: bin, sbin, etc and man.

If this is a first time installation, that is you've never installed
any ax25 utilities on your machine before you should also use the:

```
# make installconf
```

command to install some sample configuration files into the /etc/ax25/
directory from which to work.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should double check that you have the ncurses package
properly installed on your system. The configuration script attempts
to locate your ncurses packages in the common locations, but some
installations have ncurses badly installed and it is unable to locate
them.

6. A note on callsigns, addresses and things before we start.

Each AX.25 and NetRom port on your system must have a callsign/ssid
allocated to it. These are configured in the configuration files that

will be described in detail later on.

Some AX.25 implementations such as NOS and BPQ will allow you to configure the same callsign/ssid on each AX.25 and NetRom port. For somewhat complicated technical reasons Linux does not allow this. This isn't as big a problem in practise as it might seem.

This means that there are things you should be aware of and take into consideration when doing your configurations.

1. Each AX.25 and NetRom port must be configured with a unique callsign/ssid.

2. TCP/IP will use the callsign/ssid of the AX.25 port it is being transmitted or received by, ie the one you configured for the AX.25 interface in point 1.

3. NetRom will use the callsign/ssid specified for it in its configuration file, but this callsign is only used when your NetRom is speaking to another NetRom, this is not the callsign/ssid that AX.25 users who wish to use your NetRom `node' will use. More on this later.

4. Rose will, by default, use the callsign/ssid of the AX.25 port, unless the Rose callsign has been specifically set using the `rsparms' command. If you set a callsign/ssid using the `rsparms' command then Rose will use this callsign/ssid on all ports.

5. Other programs, such as the `ax25d' program can listen using any callsign/ssid that they wish and these may be duplicated across different ports.

6. If you are careful with routing you can configure the same IP address on all ports if you wish.

6.1. What are all those T1, T2, N2 and things ?

Not every AX.25 implementation is a TNC2. Linux uses nomenclature that differs in some respects from that you will be used to if your sole experience with packet is a TNC. The following table should help you interpret what each of the configurable items are, so that when you come across them later in this text you'll understand what they mean.

Linux	TAPR TNC	Description
T1	FRACK	How long to wait before retransmitting an unacknowledged frame.
T2	RESPTIME	The minimum amount of time to wait for another frame to be received before transmitting an acknowledgement.
T3	CHECK	The period of time we wait between sending

| | a check that the link is still active.

N2 | RETRY | How many times to retransmit a frame before
| | assuming the connection has failed.

Idle | | The period of time a connection can be idle
| | before we close it down.

Window | MAXFRAME | The maximum number of unacknowledged
| | transmitted frames.

6.2. Run time configurable parameters

The 2.1.* and 2.0.* +moduleXX kernels have a new feature that allows you to change many previously unchangable parameters at run time. If you take a careful look at the /proc/sys/net/ directory structure you will see many files with useful names that describe various parameters for the network configuration. The files in the /proc/sys/net/ax25/ directory each represents one configured AX.25 port. The name of the file relates to the name of the port.

The structure of the files in /proc/sys/net/ax25/<portname>/ is as follows:

FileName Meaning Values Default
ip_default_mode IP Default Mode 0=DG 1=VC 0
ax25_default_mode AX.25 Default Mode 0=Normal 1=Extended 0
backoff_type Backoff 0=Linear 1=Exponential 1
connect_mode Connected Mode 0=No 1=Yes 1
standard_window_size Standard Window 1 <= N <= 7 2
extended_window_size Extended Window 1 <= N <= 63 32
t1_timeout T1 Timeout 1s <= N <= 30s 10s
t2_timeout T2 Timeout 1s <= N <= 20s 3s
t3_timeout T3 Timeout 0s <= N <= 3600s 300s
idle_timeout Idle Timeout 0m <= N 20m
maximum_retry_count N2 1 <= N <= 31 10
maximum_packet_length AX.25 Frame Length 1 <= N <= 512 256

In the table T1, T2 and T3 are given in seconds, and the Idle Timeout is given in minutes. But please note that the values used in the sysctl interface are given in internal units where the time in seconds is multiplied by 10, this allows resolution down to 1/10 of a second. With timers that are allowed to be zero, eg T3 and Idle, a zero value indicates that the timer is disabled.

The structure of the files in /proc/sys/net/netrom/ is as follows:

FileName Values Default
default_path_quality 10
link_fails_count 2
network_ttl_initialiser 16

obsolescence_count_initialiser 6
routing_control 1
transport_acknowledge_delay 50
transport_busy_delay 1800
transport_maximum_tries 3
transport_requested_window_size 4
transport_timeout 1200

The structure of the files in /proc/sys/net/rose/ is as follows:

FileName Values Default
acknowledge_hold_back_timeout 50
call_request_timeout 2000
clear_request_timeout 1800
link_fail_timeout 1200
maximum_virtual_circuits 50
reset_request_timeout 1800
restart_request_timeout 1800
routing_control 1
window_size 3

To set a parameter all you need to do is write the desired value to
the file itself, for example to check and set the Rose window size
you'd use something like:

```
# cat /proc/sys/net/rose/window_size
3
# echo 4 >/proc/sys/net/rose/window_size
# cat /proc/sys/net/rose/window_size
4
```

7. Configuring an AX.25 port.

Each of the AX.25 applications read a particular configuration file to
obtain the parameters for the various AX.25 ports configured on your
Linux machine. For AX.25 ports the file that is read is the
/etc/ax25/axport file. You must have an entry in this file for each
AX.25 port you want on your system.

7.1. Creating the AX.25 network device.

The network device is what is listed when you use the `ifconfig'
command. This is the object that the Linux kernel sends and receives
network data from. Nearly always the network device has a physical
port associated with it, but there are occasions where this isn't
necessary. The network device does relate directly to a device driver.

In the Linux AX.25 code there are a number of device drivers. The most
common is probably the KISS driver, but others are the SCC driver(s),
the Baycom driver and the SoundModem driver.
Each of these device drivers will create a network device when it is
started.

7.1.1. Creating a KISS device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Serial port KISS driver for AX.25
```

Probably the most common configuration will be for a KISS TNC on a serial port. You will need to have the TNC preconfigured and connected to your serial port. You can use a communications program like minicom or seyon to configure the TNC into kiss mode.

To create a KISS device you use the kissattach program. In it simplest form you can use the kissattach program as follows:

```
# /usr/sbin/kissattach /dev/ttyS0 radio
# kissparms -p radio -t 100 -s 100 -r 25
```

The kissattach command will create a KISS network device. These devices are called `ax[0-9]'. The first time you use the kissattach command it creates `ax0', the second time it creates `ax1' etc. Each KISS device has an associated serial port.

The kissparms command allows you to set various KISS parameters on a KISS device.

Specifically the example presented would create a KISS network device using the serial device `/dev/ttyS0' and the entry from the /etc/ax25/axports with a port name of `radio'. It then configures it with a txdelay and slottime of 100 milliseconds and a ppersist value of 25.

Please refer to the man pages for more information.

7.1.1.1. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you to make use of both modems on a dual port TNC. Configuration is fairly simple. It works by taking a single serial device connected to a single multiport TNC and making it look like a number of devices each connected to a single port TNC. You do this before you do any of the AX.25 configuration. The devices that you then do the AX.25 configuration on are pseudo-TTY interfaces, (/dev/ttyp*), and not the actual serial device. Pseudo-TTY devices create a kind of pipe through which programs designed to talk to tty devices can talk to other programs designed to talk to tty devices. Each pipe has a master and a slave end. The master end is generally called `/dev/ptyp*' and the slave ends are called `/dev/ttyp*'. There is a one to one relationship between masters and slaves, so /dev/ptyp0 is the master end of a pipe with /dev/ttyp0 as its slave. You must open the master end of a pipe

before opening the slave end. mkiss exploits this mechanism to split a single serial device into seperate devices.

Example: if you have a dual port tnc and it is connected to your /dev/ttyS0 serial device at 9600 bps, the command:

```
# /usr/sbin/mkiss -s 9600 /dev/ttyS0 /dev/ptyp0 /dev/ptyp1
# /usr/sbin/kissattach /dev/ttyp0 port1
# /usr/sbin/kissattach /dev/ttyp1 port2
```

would create two pseudo-tty devices that each look like a normal single port TNC. You would then treat /dev/ttyp0 and /dev/ttyp1 just as you would a conventional serial device with TNC connected. This means you'd then use the kissattach command as described above, on each of those, in the example for AX.25 ports called port1 and port2. You shouldn't use kissattach on the actual serial device as the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame. This is not supported by most KISS implementation, it is supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by default. Most KISS implementation do not support this, but some do.

-l enables logging of information to the syslog logfile.

7.1.2. Creating a Baycom device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BAYCOM ser12 and par96 driver for AX.25
```

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced PicPar parallel port modems. Further information about the modems themselves may be obtained from the Baycom Web site <http://www.baycom.de/>.

Your first step should be to determine the i/o and addresses of the serial or parallel port(s) you have Baycom modem(s) connected to. When you have these you must configure the Baycom driver with them.

The BayCom driver creates network devices called: bc0, bc1, bc2 etc. when it is configured.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one Baycom modem installed you may specify the parameters on the insmod commmand line when you load the Baycom module.

For example, a simple configuration. Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod hdlcdrv
# insmod baycom mode="ser12*" iobase=0x3f8 irq=4
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod hdlcdrv
# insmod baycom mode="par96" iobase=0x378 irq=7 options=0
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the Baycom module using:

```
# insmod hdlcdrv
# insmod baycom
```

or that you compiled the kernel with the driver inbuilt.

Configure the bc0 device driver as a Parallel port Baycom modem on LPT1: with software DCD:

```
# sethdlc -p -i bc0 mode par96 io 0x378 irq 7
```

Configure the bc1 device driver as a Serial port Baycom modem on COM1:

```
# sethdlc -p -i bc1 mode "ser12*" io 0x3f8 irq 4
```

7.1.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the bc0 device with TxDelay of 200 mS, SlotTime of 100 mS, PPersist of 40 and half duplex:

```
# sethdlc -i bc0 -a txd 200 slot 100 ppersist 40 half
```

Note that the timing values are in milliseconds.

7.1.3.1. Configuring the Kernel AX.25 to use the BayCom device

The BayCom driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig bc0 hw ax25 VK2KTJ-15 up
```

will assign the BayCom device bc0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, you'll still need to use the ifconfig command to bring the device up though:

```
# ifconfig bc0 up
# axparms -setcall bc0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the BayCom device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

7.1.4. Creating a SoundModem device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
```

Thomas Sailer has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet! Thomas recommends at least a 486DX2/66 if you want to use this software as all of the digital signal processing is done by the main CPU.

The driver currently emulates 1200 bps AFSK, 4800 HAPN and 9600 FSK (G3RUH compatible) modem types. The only sound cards currently supported are SoundBlaster and WindowsSoundSystem Compatible models. The sound cards require some circuitry to help them drive the Push-To-Talk circuitry, and information on this is available from Thomas's SoundModem PTT circuit web page <http://www.ife.ee.ethz.ch/~sailer/pcf/ptt_circ/ptt.html>. There are quite a few possible options, they are: detect the sound output from the soundcard, or use output from a parallel port, serial port or midi port. Circuit examples for each of these are on Thomas's site.

The SoundModem driver creates network devices called: sm0, sm1, sm2 etc when it is configured.

Note: the SoundModem driver competes for the same resources as the Linux sound driver. So if you wish to use the SoundModem driver you must ensure that the Linux sound driver is not installed. You can of course compile them both as modules and insert and remove them as you wish.

7.1.4.1. Configuring the sound card.

The SoundModem driver does not initialise the sound card. The ax25-utils package includes a utility to do this called `setcrystal' that may be used for SoundCards based on the Crystal chipset. If you have some other card then you will have to use some other software to initialise it. Its syntax is fairly straightforward:

setcrystal [-w wssio] [-s sbio] [-f synthio] [-i irq] [-d dma] [-c dma2]

So, for example, if you wished to configure a soundblaster card at i/o base address 0x388, irq 10 and DMA 1 you would use:
setcrystal -s 0x388 -i 10 -d 1

To configure a WindowSoundSystem card at i/o base address 0x534, irq 5, DMA 3 you would use:

setcrystal -w 0x534 -i 5 -d 3

The [-f synthio] parameter is the set the synthesiser address, and the [-c dma2] parameter is to set the second DMA channel to allow full duplex operation.

7.1.4.2. Configuring the SoundModem driver.

When you have configured the soundcard you need to configure the driver telling it where the sound card is located and what sort of modem you wish it to emulate.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one soundcard installed you may specify the parameters on the insmod commmand line when you load the SoundModem module.

For example, a simple configuration, with one SoundBlaster soundcard configured as described above emulating a 1200 bps modem:

```
# insmod hdlcdrv
# insmod soundmodem mode="sbc:afsk1200" iobase=0x220 irq=5 dma=1
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the SoundModem modules using:

```
# insmod hdlcdrv
# insmod soundmodem
```

or that you compiled the kernel with the driver inbuilt.

Configure the driver to support the WindowsSoundSystem card we configured above to emulate a G3RUH 9600 compatible modem as device sm0 using a parallel port at 0x378 to key the Push-To-Talk:

```
# sethdlc -p -i sm0 mode wss:fsk9600 io 0x534 irq 5 dma 3 pario 0x378
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 4800 bps HAPN modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:hapn4800 io 0x388 irq 10 dma 1 serio 0x2f8
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 1200 bps AFSK modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:afsk1200 io 0x388 irq 10 dma 1 serio 0x2f8
```

7.1.4.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. You use the sethdlc utility for this as well.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the sm0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

```
# sethdlc -i sm0 -a txd 100 slot 50 ppersist 128 full
```

Note that the timing values are in milliseconds.

7.1.4.4. Setting the audio levels and tuning the driver.

It is very important that the audio levels be set correctly for any radio based modem to work. This is equally true of the SoundModem. Thomas has developed some utility programs that make this task easier. They are called smdiag and smmixer.

smdiag
provides two types of display, either an oscilloscope type display or an eye pattern type display.

smmixer
allows you to actually adjust the transmit and receive audio levels.

To start the smdiag utility in 'eye' mode for the SoundModem device sm0 you would use:

```
# smdiag -i sm0 -e
```

To start the smmixer utility for the SoundModem device sm0 you would use:

```
# smmixer -i sm0
```

7.1.4.5. Configuring the Kernel AX.25 to use the SoundModem

The SoundModem driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig sm0 hw ax25 VK2KTJ-15 up
```

will assign the SoundModem device sm0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, but you still need the ifconfig utility to bring the device up:

```
# ifconfig sm0 up
# axparms -setcall sm0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the SoundModem device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

7.1.5. Creating a PI card device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Ottawa PI and PI/2 support for AX.25
```

The PI card device driver creates devices named `pi[0-9][ab]'. The first PI card detected will be allocated `pi0', the second `pi1' etc. The `a' and `b' refer to the first and second physical interface on the PI card. If you have built your kernel to include the PI card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pi0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PI card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu>

7.1.6. Creating a PacketTwin device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Gracilis PackeTwin support for AX.25
```

The PacketTwin card device driver creates devices named `pt[0-9][ab]'. The first PacketTwin card detected will be allocated `pt0', the second `pt1' etc. The `a' and `b' refer to the first and second physical interface on the PacketTwin card. If you have built your kernel to include the PacketTwin card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pt0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PacketTwin card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>.

7.1.7. Creating a generic SCC device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Z8530 SCC KISS emulation driver for AX.25
```

Joerg Reuter, DL1BKE, jreuter@lykos.tng.oche.de has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

7.1.7.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4a.dl1bke.tar.gz 2.0.*
z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following command were what I used to compile and install the package for kernel version 2.0.25:

```
# cd /usr/src
# gzip -dc z8530drv-2.4a.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
```

```
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

7.1.7.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.conf. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

```
# sccinit
```

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

7.1.7.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take
anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for
the z8530 channel `A'. The argument is a hexadecimal number e.g.
0x300

ctrl_a
this keyword is used to specify the address of the control port
for the z8530 channel `A'. The arguments is a hexadecimal number
e.g. 0x304

data_b
this keyword is used to specify the address of the data port for
the z8530 channel `B'. The argument is a hexadecimal number e.g.
0x301

ctrl_b
this keyword is used to specify the address of the control port
for the z8530 channel `B'. The arguments is a hexadecimal number
e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC
described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at
the PCLK pin of the 8530. The argument is an integer frequency
in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a
character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the

```
Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280.
The argument is a character string with allowed values of `yes'
or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
```

```
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

7.1.7.3. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.conf file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and specifies the name of the special device file that the rest of the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the
interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

7.1.7.4. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

kissattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

attach asy scc0 0 ax25 scc0 256 256 4800

7.1.7.5. The sccstat and sccparam tools.

- --- BEGIN Linux AX25 HOWTO part 3/3 ---
```

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

```
22.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for TCP/IP encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.

. . . . . .
--- .
| Network /---------\ . Network
| 154.27.3/24 | | . 44.136.16/24 \ | /
| | Linux | . \|/
| | | . |
| eth0 | IPIP | . /-----\ /----------\ |
---|---------------| |-----| TNC |----| Radio |---/

| | | sl0
| | | 44.136.16.1
| | | .
| | | .
| \_________/ .
--- . . . . . .

The configuration files of interest are:

# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
```

```
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
echo " done."
#
echo -n " AX.25: "
kissattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add -net 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add -net 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add -net 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
```

```
echo "# Local routes"
echo "route add -net 44.xxx.xxx.xxx netmask 255.mmm.mmm.mmm dev sl0"
echo "#"
echo "# Misc user routes"
echo "#"
echo "# remote routes"

23. AX.25, NetRom, Rose network programming.

Probably the biggest advantage of using the kernel based implementations of the amateur packet radio protocols is the ease with which you can develop applications and programs to use them.

While the subject of Unix Network Programming is outside the scope of this document I will describe the elementary details of how you can make use of the AX.25, NetRom and Rose protocols within your software.

23.1. The address families.

Network programming for AX.25, NetRom and Rose is quite similar to programming for TCP/IP under Linux. The major differences being the address families used, and the address structures that need to be mangled into place.

The address family names for AX.25, NetRom and Rose are AF_AX25, AF_NETROM and AF_ROSE respectively.

23.2. The header files.

You must always include the `ax25.h' header file, and also the `netrom.h' or `rose.h' header files if you are dealing with those protocols. Simple top level skeletons would look something like the following:

For AX.25:

```
#include <ax25.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_AX25
```

For NetRom:

```
#include <ax25.h>
#include <netrom.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_NETROM;
```

For Rose:

```
#include <ax25.h>
#include <rose.h>
int s, addrlen = sizeof(struct sockaddr_rose);
struct sockaddr_rose sockaddr;
sockaddr.srose_family = AF_ROSE;
```

23.3. Callsign mangling and examples.

There are routines within the lib/ax25.a library built in the AX25 utilities package that manage the callsign conversions for you. You can write your own of course if you wish.

The user_call utilities are excellent examples from which to work. The source code for them is included in the AX25 utilities package. If you spend a little time working with those you will soon see that 90 percent of the work is involved in just getting ready to open the socket. Actually making the connection is easy, the preparation takes time.

The example are simple enough to not be very confusing. If you have any questions, you should feel to direct them to the linux-hams mailing list and someone there will be sure to help you.

24. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio TCP/IP discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

The linux-hams mailing list is archived at:

zone.pspt.fi <http://zone.pspt.fi/archive/linux-hams/> and zone.oh7rba.ampr.org <http://zone.oh7rba.ampr.org/archive/linux-hams/>. Please use the archives when you are first starting, because many common questions are answered there.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which TCP/IP is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

25. Acknowledgements.

The following people have contributed to this document in one way or another, knowingly or unknowingly. In no particular order (as I find them): Jonathon Naylor, Thomas Sailer, Joerg Reuter, Ron Atkinson, Alan Cox, Craig Small, John Tanner, Brandon Allbery, Hans Alblas, Klaus Kudielka, Carl Makin.

- --- BEGIN Linux AX25 HOWTO part 2/3 ---

To assist in the diagnosis of problems you can use the sccstat program
to display the current configuration of an SCC device. To use it try:

# sccstat /dev/scc0

you will displayed a very large amount of information relating to the
configuration and health of the /dev/scc0 SCC port.
The sccparam command allows you to change or modify a configuration
after you have booted. Its syntax is very similar to the NOS param
command, so to set the txtail setting of a device to 100mS you would
use:

# sccparam /dev/scc0 txtail 0x8

7.1.8. Creating a BPQ ethernet device.

Kernel Compile Options:

General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BPQ Ethernet driver for AX.25

Linux supports BPQ Ethernet compatibility. This enables you to run the
AX.25 protocol over your Ethernet LAN and to interwork your linux
machine with other BPQ machines on the LAN.

The BPQ network devices are named `bpq[0-9]'. The `bpq0' device is
associated with the `eth0' device, the `bpq1' device with the `eth1'
device etc.
```

Configuration is quite straightforward. You firstly must have
configured a standard Ethernet device. This means you will have
compiled your kernel to support your Ethernet card and tested that
this works. Refer to the Ethernet-HOWTO <Ethernet-HOWTO.html> for more
information on how to do this.

To configure the BPQ support you need to configure the Ethernet device
with an AX.25 callsign. The following command will do this for you:

/sbin/ifconfig bpq0 hw ax25 vk2ktj-14 up

Again, remember that the callsign you specify should match the entry
in the /etc/ax25/axports file that you wish to use for this port.

7.1.9. Configuring the BPQ Node to talk to the Linux AX.25 support.

BPQ Ethernet normally uses a multicast address. The Linux
implementation does not, and instead it uses the normal Ethernet
broadcast address. The NET.CFG file for the BPQ ODI driver should
therefore be modifified to look similar to this:

LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARAMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address

7.2. Creating the /etc/ax25/axports file.

The /etc/ax25/axports is a simple text file that you create with a
text editor. The format of the /etc/ax25/axports file is as follows:

portname callsign baudrate paclen window description

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your

TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-15 4800 256 2 4800bps 144.800 MHz
ether VK2KTJ-14 10000000 256 2 BPQ/ethernet device

Remember, you must assign unique callsign/ssid to each AX.25 port you create. Create one entry for each AX.25 device you want to use, this includes KISS, Baycom, SCC, PI, PT and SoundModem ports. Each entry here will describe exactly one AX.25 network device. The entries in this file are associated with the network devices by the callsign/ssid. This is at least one good reason for requiring unique callsign/ssid.

7.3. Configuring AX.25 routing.

You may wish to configure default digipeaters paths for specific hosts. This is useful for both normal AX.25 connections and also IP based connections. The axparms command enables you to do this. Again, the man page offers a complete description, but a simple example might be:

/usr/sbin/axparms -route add radio VK2XLZ VK2SUT

This command would set a digipeater entry for VK2XLZ via VK2SUT on the AX.25 port named radio.

8. Configuring an AX.25 interface for TCP/IP.

It is very simple to configure an AX.25 port to carry TCP/IP. If you have KISS interfaces then there are two methods for configuring an IP address. The kissattach command has an option that allows you to do specify an IP address. The more conventional method using the ifconfig command will work on all interface types.

So, modifying the previous KISS example:

/usr/sbin/kissattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
/sbin/route add -net 44.136.8.0 netmask 255.255.255.0 ax0
/sbin/route add default ax0

to create the AX.25 interface with an IP address of 44.136.8.5 and an MTU of 512 bytes. You should still use the ifconfig to configure the

other parameters if necessary.

If you have any other interface type then you use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other TCP/IP interface. The following example is for a PI card device, but would work equally well for any other AX.25 network device:

```
# /sbin/ifconfig pi0a 44.136.8.5 netmask 255.255.255.0 up
# /sbin/ifconfig pi0a broadcast 44.136.8.255 mtu 512
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 pi0a
# /sbin/route add default pi0a
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other TCP/IP software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

9. Configuring a NetRom port.

The NetRom protocol relies on, and uses the AX.25 ports you have created. The NetRom protocol rides on top of the AX.25 protocol. To configure NetRom on an AX.25 interface you must configure two files. One file describes the Netrom interfaces, and the other file describes which of the AX.25 ports will carry NetRom. You can configure multiple NetRom ports, each with its own callsign and alias, the same procedure applies for each.

9.1. Configuring /etc/ax25/nrports

The first is the /etc/ax25/nrports file. This file describes the NetRom ports in much the same way as the /etc/ax25/axports file describes the AX.25 ports. Each NetRom device you wish to create must have an entry in the /etc/ax25/nrports file. Normally a Linux machine would have only one NetRom device configured that would use a number of the AX.25 ports defined. In some situations you might wish a special service such as a BBS to have a seperate NetRom alias and so you would create more than one.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use. Note, this is not that address that users should connect to to get access to a node style interface. (The node program is covered later). This callsign/ssid should be unique and should not appear elsewhere in either of the /etc/ax25/axports or the /etc/ax25/nrports files.

alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

netrom VK2KTJ-9 LINUX 236 Linux Switch Port

This example creates a NetRom port known to the rest of the NetRom network as `LINUX:VK2KTJ-9'.

This file is used by programs such as the call program.

9.2. Configuring /etc/ax25/nrbroadcast

The second file is the /etc/ax25/nrbroadcast file. This file may contain a number of entries. There would normally be one entry for each AX.25 port that you wish to allow NetRom traffic on.

This file is formatted as follows:

axport min_obs def_qual worst_qual verbose

Where:

axport
is the port name obtained from the /etc/ax25/axports file. If you do not have an entry in /etc/ax25/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts will occur from this port or only a routing broadcast

advertising the node itself.

An example would look something like the following:

radio 1 200 100 1

9.3. Creating the NetRom Network device

When you have the two configuration files completed you must create the NetRom device in much the same way as you did for the AX.25 devices. This time you use the nrattach command. The nrattach works in just the same way as the axattach command except that it creates NetRom network devices called `nr[0-9]'. Again, the first time you use the nrattach command it creates the `nr0' device, the second time it creates the `nr1' network devices etc. To create the network device for the NetRom port we've defined we would use:

nrattach netrom

This command would start the NetRom device (nr0) named netrom configured with the details specified in the /etc/ax25/nrports file.

9.4. Starting the NetRom daemon

The Linux kernel does all of the NetRom protocol and switching, but does not manage some functions. The NetRom daemon manages the NetRom routing tables and generates the NetRom routing broadcasts. You start NetRom daemon with the command:

/usr/sbin/netromd -i

You should soon see the /proc/net/nr_neigh file filling up with information about your NetRom neighbours.

Remember to put the /usr/sbin/netromd command in your rc files so that it is started automatically each time you reboot.

9.5. Configuring NetRom routing.

You may wish to configure static NetRom routes for specific hosts. The nrparms command enables you to do this. Again, the man page offers a complete description, but a simple example might be:

/usr/sbin/nrparms -nodes VK2XLZ-10 + #MINTO 120 5 radio VK2SUT-9

This command would set a NetRom route to #MINTO:VK2XLZ-10 via a neighbour VK2SUT-9 on my AX.25 port called `radio'.

You can manually create entries for new neighbours using the nrparms command as well. For example:

/usr/sbin/nrparms -routes radio VK2SUT-9 + 120

This command would create VK2SUT-9 as a NetRom neighbour with a quality of 120 and this will be locked and will not be deleted automatically.

10. Configuring a NetRom interface for TCP/IP.

Configuring a NetRom interface for TCP/IP is almost identical to configuring an AX.25 interface for TCP/IP.

Again you can either specify the ip address and mtu on the nrattach command line, or use the ifconfig and route commands, but you need to manually add arp entries for hosts you wish to route to because there is no mechanism available for your machine to learn what NetRom address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5, an mtu of 512 and configured with the details from the /etc/ax25/nrports file for a NetRom port named netrom you would use:

```
# /usr/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# /usr/sbin/nrattach netrom
# ifconfig nr0 44.136.8.5 netmask 255.255.255.0 hw netrom VK2KTJ-9
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

11. Configuring a Rose port.

The Rose packet layer protocol is similar to layer three of the X.25 specification. The kernel based Rose support is a modified version of the FPAC Rose implementation <http://fpac.lmi.ecp.fr/f1oat/f1oat.html>.

The Rose packet layer protocol protocol relies on, and uses the AX.25 ports you have created. The Rose protocol rides on top of the AX.25 protocol. To configure Rose you must create a configuration file that describes the Rose ports you want. You can create multiple Rose ports if you wish, the same procedure applies for each.

11.1. Configuring /etc/ax25/rsports

The file where you configure your Rose interfaces is the /etc/ax25/rsports file. This file describes the Rose port in much the same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

name addresss description

Where:

name
is the text name that you wish to refer to the port by.

address
is the 10 digit Rose address you wish to assign to this port.

description
is a free text description of the port.

An example would look something like the following:

rose 5050294760 Rose Port

Note that Rose will use the default callsign/ssid configured on each
AX.25 port unless you specify otherwise.

To configure a seperate callsign/ssid for Rose to use on each port you
use the rsparms command as follows:

/usr/sbin/rsprams -call VK2KTJ-10

This example would make Linux listen for and use the callsign/ssid
VK2KTJ-10 on all of the configured AX.25 ports for Rose calls.

11.2. Creating the Rose Network device.

When you have created the /etc/ax25/rsports file you may create the
Rose device in much the same way as you did for the AX.25 devices.
This time you use the rsattach command. The rsattach command creates
network devices named `rose[0-5]'. The first time you use the rsattach
command it create the `rose0' device, the second time it creates the
`rose1' device etc. For example:

rsattach rose

This command would start the Rose device (rose0) configured with the
details specified in the /etc/ax25/rsports file for the entry named
`rose'.

11.3. Configuring Rose Routing

The Rose protocol currently supports only static routing. The rsparms
utility allows you to configure your Rose routing table under Linux.

For example:

rsparms -nodes add 5050295502 radio vk2xlz

would add a route to Rose node 5050295502 via an AX.25 port named
`radio' in your /etc/ax25/axports file to a neighbour with the call&#65533;
sign VK2XLZ.

You may specify a route with a mask to capture a number of Rose destinations into a single routing entry. The syntax looks like:

rsparms -nodes add 5050295502/4 radio vk2xlz

which would be identical to the previous example except that it would match any destination address that matched the first four digits sup&#65533;plied, in this case any address commencing with the digits 5050. An alternate form for this command is:

rsparms -nodes add 5050/4 radio vk2xlz

which is probably the less ambiguous form.

12. Making AX.25/NetRom/Rose calls.

Now that you have all of your AX.25, NetRom and Rose interfaces configured and active, you should be able to make test calls.

The AX25 Utilities package includes a program called `call' which is a splitscreen terminal program for AX.25, NetRom and Rose.

A simple AX.25 call would look like:

/usr/bin/call radio VK2DAY via VK2SUT

A simple NetRom call to a node with an alias of SUNBBS would look like:

/usr/bin/call netrom SUNBBS

A simple Rose call to HEARD at node 5050882960 would look like:

/usr/bin/call rose HEARD 5050882960

Note: you must tell call which port you wish to make the call on, as the same destination node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

13. Configuring Linux to accept Packet connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25, NetRom or Rose connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". People are developing neat little applications that may be used to provide services to callers, a simple example is the pms program included in the AX25 utilities, a more complex example is the node program also included in the AX25 utilities. Alternatively you

might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

The ax25d program is similar to the inetd program commonly used to accept incoming TCP/IP connections on unix machines. It sits and listens for incoming connections, when it detects one it goes away and checks a configuration file to determine what program to run and connect to that connection. Since this the standard tool for accepting incoming AX.25, NetRom and Rose connections I'll describe how to configure it.

13.1. Creating the /etc/ax25/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25, NetRom and Rose connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The general format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[port_name] || <port_name> || {port_name}
<peer1> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
parameters window T1 T2 T3 idle N2 <mode>
<peer3> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<port_name>
is the name of the AX.25, NetRom or Rose port as specified in the /etc/ax25/axports, /etc/ax25/nrports and /etc/ax25/rsports files. The name of the port is surrounded by the `[]' brackets if it is an AX.25 port, the `<>' brackets if it is a NetRom port, or the `{}' brackets if it is a Rose port. There is an alternate form for this field, and that is use prefix the port name with `callsign/ssid via' to indicate that you wish accept calls to the callsign/ssid via this interface. The example should more clearly illustrate this.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then

any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

idle
is the idle timer value in seconds.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by supplying a combination of characters, each representing a permission. The characters may be in either upper or lower case and must be in a single block with no spaces.

u/U
UTMP - currently unsupported.

v/V
Validate call - currently unsupported.

q/Q
Quiet - Don't log connection

n/N
check NetRom Neighbour - currently unsupported.

d/D
Disallow Digipeaters - Connections must be direct, not digipeated.

l/L
Lockout - Don't allow connection.

*/0
marker - place marker, no mode set.

<uid>
is the userid that the program to be run to support the connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments

specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it
is run. You pass useful information into these arguments by use
of the following tokens:

%d Name of the port the connection was received on.

%U AX.25 callsign of the connected party without the SSID, in
uppercase.

%u AX.25 callsign of the connected party without the SSID, in
lowercase.

%S AX.25 callsign of the connected party with the SSID, in
uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

%P AX.25 callsign of the remote node that the connection came in
from without the SSID, in uppercase.

%p AX.25 callsign of the remote node that the connection came in
from without the SSID, in lowercase.

%R AX.25 callsign of the remote node that the connection came in
from with the SSID, in uppercase.
%r AX.25 callsign of the remote node that the connection came in
from with the SSID, in lowercase.

You need one section in the above format for each AX.25, NetRom or
Rose interface you want to accept incoming AX.25, NetRom or Rose
connections on.

There are two special lines in the paragraph, one starts with the
string `parameters' and the other starts with the string `default'
(yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not
matching any specific rule will be disconnected immediately without
notice.

The `parameters' line is a little more subtle, and here is the trap I
mentioned earlier. In any of the fields for any definition for a peer
you can use the `*' character to say `use the default value'. The

`parameters' line is what sets those default values. The kernel
software itself has some defaults which will be used if you don't
specify any using the `parameters' entry. The trap is that the these
defaults apply only to those rules below the `parameters' line not to
those above. You may have more than one `parameters' rule per
interface definition, and in this way you may create groups of default
configurations.

13.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 02/03/97
# This configuration uses the AX.25 port defined earlier.

# <peer> Win T1 T2 T3 idl N2 <mode> <uid> <exec> <argv[0]>[<args....>]

[VK2KTJ-0 via radio]
parameters 1 10 * * * * * root /usr/sbin/axspawn axspawn %u +
VK2XLZ * * * * * * *
VK2DAY * * * * * * *
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

[VK2KTJ-1 via radio]
default * * * * * 0 root /usr/sbin/node node

<netrom>
parameters 1 10 * * * * *
NOCALL * * * * * * L
default * * * * * * 0 root /usr/sbin/node node

{VK2KTJ-0 via rose}
parameters 1 10 * * * * * root /usr/sbin/axspawn axspawn %u +
VK2XLZ * * * * * * *
VK2DAY * * * * * * *
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

{VK2KTJ-1 via rose}
default * * * * * 0 root /usr/sbin/node node radio
```

This example says that anybody attempting to connect to the callsign
`VK2KTJ-0' heard on the AX.25 port called `radio' will have the
following rules applied:

Anyone whose callsign is set to `NOCALL' should be locked out, note
the use of mode `L'.

The parameters line changes two parameters from the kernel defaults
(Window and T1) and will run the /usr/sbin/axspawn program for them.
Any copies of /usr/sbin/axspawn run this way will appear as axspawn in
a ps listing for convenience. The next two lines provide definitions
for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection, and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

The next configuration accepts calls to VK2KTJ-1 via the radio port. It runs the node program for everybody that connects to it.

The next configuration is a NetRom configuration, note the use of the greater-then and less-than braces instead of the square brackets. These denote a NetRom configuration. This configuration is simpler, it simply says that anyone connecting to our NetRom port called `netrom' will have the node program run for them, unless they have a callsign of `NOCALL' in which case they will be locked out.

The last two configurations are for incoming Rose connections. The first for people who have placed calls to `vk2ktj-0' and the second for `VK2KTJ-1 at the our Rose node address. These work precisely the same way. Not the use of the curly braces to distinguish the port as a Rose port.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. The configuration file is explained fully in the ax25d.conf man page. A more detailed example is included in the ax25-utils package that might be useful to you too.

13.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/sbin/ax25d

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

14. Configuring the node software.

The node software was developed by Tomi Manninen <tomi.manninen@hut.fi> and was based on the original PMS program. It provides a fairly complete and flexible node capability that is easily configured. It allows users once they are connected to make Telnet, NetRom, Rose, and AX.25 connections out and to obtain various sorts of information such as Finger, Nodes and Heard lists etc. You can configure the node to execute any Linux command you wish fairly simply.

The node would normally be invoked from the ax25d program although it is also capable of being invoked from the TCP/IP inetd program to allow users to telnet to your machine and obtain access to it, or by

running it from the command line.

14.1. Creating the /etc/ax25/node.conf file.

The node.conf file is where the main configuration of the node takes
place. It is a simple text file and its format is as follows:

```
# /etc/ax25/node.conf
# configuration file for the node(8) program.
#
# Lines beginning with '#' are comments and are ignored.

# Hostname
# Specifies the hostname of the node machine
hostname radio.gw.vk2ktj.ampr.org

# Local Network
# allows you to specify what is consider 'local' for the
# purposes of permission checking using nodes.perms.
localnet 44.136.8.96/29

# Hide Ports
# If specified allows you to make ports invisible to users. The
# listed ports will not be listed by the (P)orts command.
hiddenports rose netrom

# Node Identification.
# this will appear in the node prompt
NodeId LINUX:VK2KTJ-9

# NetRom port
# This is the name of the netrom port that will be used for
# outgoing NetRom connections from the node.
NrPort netrom

# Node Idle Timeout
# Specifies the idle time for connections to this node in seconds.
idletimout 1800

# Connection Idle Timeout
# Specifies the idle timer for connections made via this node in
# seconds.
conntimeout 1800

# Reconnect
# Specifies whether users should be reconnected to the node
# when their remote connections disconnect, or whether they
# should be disconnected complete.
reconnect on

# Command Aliases
# Provide a way of making complex node commands simple.
alias CONV "telnet vk1xwt.ampr.org 3600"
alias BBS "connect radio vk2xsb"
```

```
# Externam Command Aliases
# Provide a means of executing external commands under the node.
# extcmd <cmdname> <flag> <userid> <command>
# Flag == 1 is the only implemented function.
# <command> is formatted as per ax25d.conf
extcmd PMS 1 root /usr/sbin/pms pms -u %U -o VK2KTJ

# Logging
# Set logging to the system log. 3 is the noisiest, 0 is disabled.
loglevel 3

# The escape character
# 20 = (Control-T)
EscapeChar 20
```

14.2. Creating the /etc/ax25/node.perms file.

The node allows you to assign permissions to users. These permissions allow you to determine which users should be allowed to make use of options such as the (T)elnet, and (C)onnect commands, for example, and which shouldn't. The node.perms file is where this information is stored and contains five key fields. For all fields an asterisk `*' character matches anything. This is useful for building default rules.

user
The first field is the callsign or user to which the permissions should apply. Any SSID value is ignored, so you should just place the base callsign here.

method
Each protocol or access method is also given permissions. For example you might allow users who have connected via AX.25 or NetRom to use the (C)onnect option, but prevent others, such as those who are telnet connected from a non-local node from having access to it. The second field therefore allows you to select which access method this permissions rule should apply to. The access methods allowed are:

```
method description
------ -------------------------------------------------------------
ampr User is telnet connected from an amprnet address (44.0.0.0)
ax25 User connected by AX.25
host User started node from command line
inet user is telnet connected from a non-loca, non-ampr address.
local User is telnet connected from a 'local' host
netrom User connected by NetRom
rose User connected by Rose
* User connected by any means.
```

port
For AX.25 users you can control permissions on a port by port basis too if you choose. This allows you to determine what AX.25 are allowed to do based on which of your ports they have connected to. The third field contains the port name if you are

using this facility. This is useful only for AX.25 connections.

password
You may optionally configure the node so that it prompts users
to enter a password when they connect. This might be useful to
help protect specially configured users who have high authority
levels. If the fourth field is set then its value will be the
password that will be accepted.

permissions
The permissions field is the final field in each entry in the
file. The permissions field is coded as a bit field, with each
facility having a bit value which if set allows the option to be
used and if not set prevents the facility being used. The list
of controllable facilities and their corresponding bit values
are:

value description
----- --
1 Login allowed.
2 AX25 (C)onnects allowed.
4 NetRom (C)onnects allowed.
8 (T)elnet to local hosts allowed.
16 (T)elnet to amprnet (44.0.0.0) hosts allowed.
32 (T)elnet to non-local, non-amprnet hosts allowed.
64 Hidden ports allowed for AX.25 (C)onnects.
128 Rose (C)onnects allowed.

To code the permissions value for a rule, simply take each of the
permissions you want that user to have and add their values
together. The resulting number is what you place in field five.

A sample nodes.perms might look like:

```
# /etc/ax25/node.perms
#
# The node operator is VK2KTJ, has a password of 'secret' and
# is allowed all permissions by all connection methods
vk2ktj * * secret 255

# The following users are banned from connecting
NOCALL * * * 0
PK232 * * * 0
PMS * * * 0

# INET users are banned from connecting.
* inet * * 0

# AX.25, NetRom, Local, Host and AMPR users may (C)onnect and (T)elnet
# to local and ampr hosts but not to other IP addresses.
* ax25 * * 159
* netrom * * 159
* local * * 159
```

```
* host * * 159
* ampr * * 159
```

14.3. Configuring node to run from ax25d

The node program would normally be run by the ax25d program. To do this you need to add appropriate rules to the /etc/ax25/ax25d.conf file. In my configuration I wanted users to have a choice of either connecting to the node or connecting to other services. ax25d allows you to do this by cleverly creating creating port aliases. For example, given the ax25d configuration presented above, I want to configure node so that all users who connect to VK2KTJ-1 are given the node. To do this I add the following to my /etc/ax25/ax25d.conf file:

```
[vk2ktj-1 via radio]
default * * * * * 0 root /usr/sbin/node node
```

This says that the Linux kernel code will answer any connection requests for the callsign `VK2KTJ-1' heard on the AX.25 port named `radio', and will cause the node program to be run.

14.4. Configuring node to run from inetd

If you want users to be able to telnet a port on your machine and obtain access to the node you can go this fairly easily. The first thing to decide is what port users should connect to. In this example I've arbitrarily chosen port 4000, though Tomi gives details on how you could replace the normal telnet daemon with the node in his documentation.

You need to modify two files.

To /etc/services you should add:

```
node 3694/tcp #OH2BNS's node software
```

and to /etc/inetd.conf you should add:

```
node stream tcp nowait root /usr/sbin/node node
```

When this is done, and you have restarted the inetd program any user who telnet connects to port 3694 of your machine will be prompted to login and if configured, their password and then they will be con&#65533;nected to the node.

15. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be logged in to your machine. It may be invoked from the ax25d program as described above in a manner similar to the node program. To allow a user to log in to your machine you should add a line similar to the following into your /etc/ax25/ax25d.conf file:

```
default * * * * * 1 root /usr/sbin/axspawn axspawn %u
```

If the line ends in the + character then the connecting user must hit
return before they will be allowed to login. The default is to not
wait. Any individual host configurations that follow this line will
have the axspawn program run when they connect. When axspawn is run it
first checks that the command line argument it is supplied is a legal
callsign, strips the SSID, then it checks that /etc/passwd file to see
if that user has an account configured. If there is an account, and
the password is either "" (null) or + then the user is logged in, if
there is anything in the password field the user is prompted to enter
a password. If there is not an existing account in the /etc/passwd
file then axspawn may be configured to automatically create one.

15.1. Creating the /etc/ax25/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the
/etc/ax25/axspawn.conf file. This file is formatted as follows:

```
# /etc/ax25/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.
```

```
create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.
```

guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

16. Configuring the pms

The pms program is an implementation of a simple personal message
system. It was originally written by Alan Cox. Dave Brown, N2RJT,
<dcb@vectorbd.com> has taken on further development of it. At present
it is still very simple, supporting only the ability to send mail to
the owner of the system and to obtain some limited system information
but Dave is working to expand its capability to make it more useful.

After that is done there are a couple of simple files that you should
create that give users some information about the system and then you
need to add appropriate entries into the ax25d.conf file so that
connected users are presented with the PMS.

16.1. Create the /etc/ax25/pms.motd file.

The /etc/ax25/pms.motd file contains the `message of the day' that
users will be presented with after they connect and receive the usual
BBS id header. The file is a simple text file, any text you include in
this file will be sent to users.

16.2. Create the /etc/ax25/pms.info file.

The /etc/ax25/pms.info file is also a simple text file in which you
would put more detailed information about your station or
configuration. This file is presented to users in response to their

issuing of the Info command from the PMS> prompt.

16.3. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine. This is described in a section of its own.

16.4. Add the PMS to the /etc/ax25/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/sbin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.

16.5. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/sbin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

17. Configuring the user_call programs.

The `user_call' programs are really called: ax25_call and netrom_call. They are very simple programs designed to be called from ax25d to automate network connections to remote hosts. They may of course be called from a number of other places such as shell scripts or other daemons such as the node program.

They are like a very simple call program. They don't do any meddling with the data at all, so the end of line handling you'll have to worry about yourself.

Let's start with an example of how you might use them. Imagine you have a small network at home and that you have one linux machine

acting as your Linux radio gateway and another machine, lets say a BPQ node connected to it via an ethernet connection.

Normally if you wanted radio users to be able to connect to the BPQ node they would either have to digipeat through your linux node, or connect to the node program on your linux node and then connect from it. The ax25_call program can simplify this if it is called from the ax25d program.

Imagine the BPQ node has the callsign VK2KTJ-9 and that the linux machine has the AX.25/ethernet port named `bpq'. Let us also imagine the Linux gateway machine has a radio port called `radio'.

An entry in the /etc/ax25/ax25d.conf that looked like:

```
[VK2KTJ-1 via radio]
default * * * * * * *
root /usr/sbin/ax25_call ax25_call bpq %u vk2ktj-9
```

would enable users to connect direct to `VK2KTJ-1' which would actu&#65533;
ally be the Linux ax25d daemon and then be automatically switched to
an AX.25 connection to `VK2KTJ-9' via the `bpq' interface.

There are all sorts of other possible configurations that you might try. The `netrom_call' and `rose_call' utilities work in similar ways. One amateur has used this utility to make connections to a remote BBS easier. Normally the users would have to manually enter a long connection string to make the call so he created an entry that made the BBS appear as though it were on the local network by having his ax25d proxy the connection to the remote machine.

18. Configuring the Rose Uplink and Downlink commands

If you are familiar with the ROM based Rose implementation you will be familiar with the method by which AX.25 users make calls across a Rose network. If a users local Rose node has the callsign VK2KTJ-5 and the AX.25 user wants to connect to VK5XXX at remote Rose node 5050882960 then they would issue the command:

```
c vk5xxx v vk2ktj-5 5050 882960
```

At the remote node, VK5XXX would see an incoming connection with the local AX.25 users callsign and being digipeated via the remote Rose nodes callsign.

The Linux Rose implementation does not support this capability in the kernel, but there are two application programs called rsuplnk and rsdwnlnk which perform this function.

18.1. Configuring a Rose downlink

To configure your Linux machine to accept a Rose connection and establish an AX.25 connection to any destination callsign that is not being listened for on your machine you need to add an entry to your

/etc/ax25/ax25d.conf file. Normally you would configure this entry to be the default behaviour for incoming Rose connections. For example you might have Rose listeners operating for destinations like NODE-0 or HEARD-0 that you wish to handle locally, but for all other destination calls you may want to pass them to the rsdwnlink command and assume they are AX.25 users.

A typical configuration would look like:

```
#
{* via rose}
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsdwnlnk rsdwnlnk 4800 vk2ktj-5
#
```

With this configuration any user who established a Rose connection to your Linux nodes address with a destination call of something that you were not specifically listening for would be converted into an AX.25 connection on the AX.25 port named 4800 with a digipeater path of VK2KTJ-5.

18.2. Configuring a Rose uplink

To configure your Linux machine to accept AX.25 connections in the same way that a ROM Rose node would you must add an entry into your /etc/ax25/ax25d.conf file that looks similar to the following:

```
#
[VK2KTJ-5* via 4800]
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsuplnk rsuplnk rose
#
```

Note the special syntax for the local callsign. The `*' character indicates that the application should be invoked if the callsign is heard in the digipeater path of a connection.

This configuration would allow an AX.25 user to establish Rose calls using the example connect sequence presented in the introduction. Anybody attempting to digipeat via VK2KTJ-5 on the AX.25 port named 4800 would be handled by the rsuplnk command.

19. Associating AX.25 callsigns with Linux users.

There are a number of situations where it is highly desirable to associate a callsign with a linux user account. One example might be where a number of amateur radio operators share the same linux machine and wish to use their own callsign when making calls. Another is the case of PMS users wanting to talk to a particular user on your machine.

The AX.25 software provides a means of managing this association of linux user account names with callsigns. We've mentioned it once already in the PMS section, but I'm spelling it out here to be sure

you don't miss it.

You make the association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine. So, for example, any mail for vk2ktj on the pms will be sent to Linux account terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

Note you should never associate a callsign with the root account as this can cause configuration problems in other programs.

20. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

20.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program,

as the Linux kernel starts first and the master end of the pipe must
be opened first. You must also remember that your Linux kernel must
have a different IP address to your NOS, so you will need to allocate
a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to
create the slip link from your linux kernel you can use commands
similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 netmask 255.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88
and the NOS program is using IP address 44.70.248.67. The route
command in the last line simply tells your linux kernel to route all
datagrams for the amprnet via the slip link created by the slattach
command. Normally you would put these commands into your
/etc/rc.d/rc.inet2 file after all your other network configuration is
complete so that the slip link is created automatically when you
reboot. Note: there is no advantage in using cslip instead of slip as
it actually reduces performance because the link is only a virtual one
and occurs fast enough that having to compress the headers first takes
longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end
of the pipe device pair to your linux kernel, and a route to it to
make it work. When you have started NOS you should be able to ping and
telnet to your NOS from your Linux machine and vice versa. If not,
double check that you have made no mistakes especially that you have
the addresses configured properly and have the pipe devices around the
right way.

21. The /proc/ file system entries.

The /proc filesystem contains a number of files specifically related
to the AX25 and NetRom kernel software. These files are normally used
by the AX52 utilities, but they are plainly formatted so you may be
interested in reading them. The format is fairly easily understood so
I don't think much explanation will be necessary.

/proc/net/arp
contains the list of Address Resolution Protocol mappings of IP
addresses to MAC layer protocol addresses. These can can AX.25,
ethernet or some other MAC layer protocol.

/proc/net/ax25
contains a list of AX.25 sockets opened. These might be
listening for a connection, or active sessions.

/proc/net/ax25_bpqether
contains the AX25 over ethernet BPQ style callsign mappings.

/proc/net/ax25_calls
contains the linux userid to callsign mappings set my the
axparms -assoc command.

/proc/net/ax25_route
contains AX.25 digipeater path information.

/proc/net/nr
contains a list of NetRom sockets opened. These might be
listening for a connection, or active sessions.

/proc/net/nr_neigh
contains information about the NetRom neighbours known to the
NetRom software.

/proc/net/nr_nodes
contains information about the NetRom nodes known to the NetRom
software.

/proc/net/rose
contains a list of Rose sockets opened. These might be listening
for a connection, or active sessions.

/proc/net/rose_nodes
contains a mapping of Rose destinations to Rose neighbours.

/proc/net/rose_neigh
contains a list of known Rose neighbours.

/proc/net/rose_routes
contains a list of all established Rose connections.

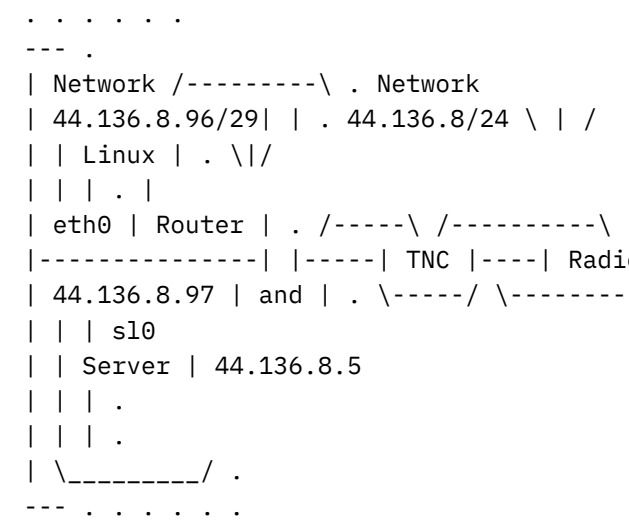
22. Some sample configurations.

Following are examples of the most common types of configurations.
These are guides only as there are as many ways of configuring your
network as there are networks to configure, but they may give you a
start.

22.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to
connect the machines on that network to your local radio LAN. This is
the type of configuration I use at home. I arranged to have a suitable
block of addresses allocated to me that I could capture in a single
route for convenience and I use these on my Ethernet LAN. Your local
IP coordinator will assist you in doing this if you want to try it as
well. The addresses for the Ethernet LAN form a subset of the radio
LAN addresses. The following configuration is the actual one for my

linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
kissattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end
```

```
/etc/ax25/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/etc/ax25/nrports

# name callsign alias paclen description
netrom VK2KTJ-9 LINUX 235 Linux Switch Port

/etc/ax25/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 netmask 255.0.0.0 \
gw 44.136.8.97 window 512 mss 512 eth0

The use of the mss and window parameters means that I can get optimum
performance from both local Ethernet and radio based connections.
```

• I also run my smail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

```

482. !! Alcatraz Mini-DXpedition !!

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-06 00:00:00 UTC
From: Ken Harrison <ken@cds1.net>
Message-ID: <33C084B8.28B9@cds1.net>
Source record: 194190
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.antenna

The Sonoma County Radio Amateurs will be packing up their radio
equipment and portable antennas and taking them on a Mini-DXpedition
OVERNIGHT to Alcatraz Island... THE ROCK!

The trip will be on July 26th and 27th. You can read more about it
and see just exactly what frequencies we will be operating on if you
check out the following URL:

http://cds1.net/scra/alcatraz.shtml

We will be offering either special QSL cards or Certificates. (We
aren't
sure which it will be at this time. You must send us a SASE to the
address on the URL. Also please make note of the operator's name you
talked with.)

Please look for us on the bands and we can help each other to make this
a successful mini-DXpedition! Thanks!

73,
Ken

Brian Klein <brian@nospam.com> babbled:

>Such as a daytime only AM station, eh Drew?

Seems you have some catching up to do. First of all, I am no longer working for WOTS/1220/Kissimmee-Orlando, which I assume is the station you're refering to. The owners decided to replace their live airstaff with a digital automation several months ago. Secondly, the previously-mentioned station has not been a "daytime only" outlet for several months. They received their nighttime authorization in 1994 or 1995, I believe.

>You are about the biggest
>loser I have ever witnessed on newsgroups.

Based on what? I'm sure you're going to give me your expert analysis here...

>When you're not on the
>amateur groups whining about your inability to upgrade your license

If you're refering to my opinions against continued Morse code testing, you're wrong in that it's based on any "inability" I might have. I have passed the Morse hazing ritual, but see no need for it's continued requirement in view of modern communications technology.

>your on rec.radio.broadcasting lying about your talents.

Please provide proof of this. To accuse someone publicly of "lying" is a rather serious accusation. In the legal sense, it could well be grounds for a libel and/or defamation suit if the individual making the accusation is unable to substantiate his claim.

>I have
>listened to your little diatribe on RealAudio and let me tell you, YOU
>SUCK!!

Sounds like a bit of jealousy here. Glad you enjoy our Sunday night Internet Oldies show. Be sure to tell your friends to punch up www.retro-rock.com on Sunday nights from 8-Midnight EDT.

>Quite frankly, I wouldn't be putting down the RS droids if I
>were you. An AM DJ has NO right to complain about people being
>senseless.

You just said I was on RealAudio. Which one is it?

>Remember, your whole job is putting on some dumb fucking
>song from the 70's and telling everyone the time.

Why don't you tell us all just what it is that YOU do for a living that
makes you so important and successful in comparison to myself.

> feelings about this?

This has been going on for quite awhile. During the last cycle you could hear cbers on 10 just about any time of the day. 28.085 is now a regular trucker's channel. You will be hearing more cbers as this next cycle improves. When I hear them on, I break into the conversation and ask them to leave. A lot of them, being the typical cber and knowing nothing about band allocations, do not realize that they are not on a legal cb channel. A lot of the time the response is "why do I have this channel in my cb if it isn't a cb channel?" My suggestion is that we have to interfere with them enough that it just isn't worth the trouble for them to operate on 10 meters. Don't expect a lot from the FCC. It will be up to the hams to take care of it.

Brian Klein <brian@nospam.com> still doesn't get it:

>At least you got the freak part right. I wish I could take credit
>for that saying, but I saw it posted somewhere else after one of your
>pointless ramblings.

Well, at least you admit that you couldn't come up with an original
insult.

>I did NOT claim that you couldn't pass the 5 wpm Morse test. I
>imply stated that you, for some reason or another, could not upgrade
>from your present status of Technician Plus. This is either due to you
>not being able to grasp the written information or your lack of CW
>copying ability. I would be inclined to bet on the former.

Who says that I have any DESIRE to upgrade? The only additional
frequencies remotely interesting to me that I cannot legally transmit on
is the 28.5-29.7 section of 10 meters. I believe I made a very convincing
argument as to why Novice/Tech Plus users should have access to that
portion of the band. I have yet to have someone give me a convincing
argument as to why I can transmit 200 watts simplex on 10m, but yet I
cannot legally transmit 1/10 that amount of power into a repeater on the
same band with the same propagation characteristics.

>Now don't get me wrong. There is NOTHING wrong with being a Tech,
>coded or otherwise. What pisses me off is the fact that everywhere, at
>least the rec.radio.*** hobby groups, you are constantly bickering and
>moaning about how shitty ham radio is and how bad the system works. I
>think you are turning more and more people away from ham radio than ANY
>stupid Morse code "hazing" ritual.

No. What I am opposed to and what turns off would-be hams is the
illogical and outdated rules and hurdles that are necessary to obtain a
license. Also, the attitudes of YE OLDE FAHRTZ who insist on keeping
these rules, at the expense of growth and survival of the hobby, simply
because "I had to do it, so they have to do it, too."

>I know a lot of no code techs who are excited about getting on the
>air. Once they get a taste of HF, Field Day, they want to jump in with
>both feet. A local 10 year old just passed his General. See what you
>can do Drew, if you would just shut the fuck up and study! You are one
>of those guys who feel that life owes them something. Well, life
>doesn't owe you shit. You have to get out and work for it.

You miss the point totally. I'll say it again: Morse Code knowledge is
irrelavent for the purposes of obtaining any government-issued radio
license in the year 1997. "Because it's always been required and we want

to keep it that way" doesn't cut it when we are talking about publicly-owned radio frequencies. Hazing rituals and rules based on tradition are fine for a private club, but have no place determining who has the right to be issued a radio license by our government.

>If they did away with the Morse code, and they will, that would be
>fine by me. But, I live in the present. If you want the right to HF
>operation now, you will HAVE to learn the code.

You want me and others who believe as I do to simply "shut up" and accept things as they are, rather than fight to change them. Sorry. There are millions of hams of ALL license classes who feel as I do. We will not "sit down and shut up", bowing to the wishes of the ARRL and others like them who wish to keep HF locked up as their own private club, complete with Morse hazing rituals required in order to gain entry.

>You have rambled on before about freebanding. Now here you are, a
>licensed operator, condoning and promoting illegal activity. You are
>truly a hypocrite and an asshole.

Just when I think we're beginning to have a civilized debate, you revert back to profanity and name-calling. Typical.

I am a realist. The reality of the freebanding situation is that there ARE thousands (if not millions) of active operators, the FCC is not going to and cannot make them disappear, and in fact, their numbers are growing. Most of these operators are technically-knowledgeable folks who love radio and personal communications every bit as much as we do. Many of them would be ham operators if not for two reasons: the Morse code requirement and their (correct) perception that many (though not all) ham operators are "stuffy" and elitists who look down on anyone they consider to be "unworthy" of joining their little private club. It is also reality that many hams are also active freebanders. Take a listen the next time the band opens up; though I'm sure you'll never admit it, you'll hear many of the same voices around 27.500-600 as you do on 10 meters. Why? Because freebanding allows these hams to have fun, non-formal communications with other radio enthusiasts, away from the endless discussions about "my rig is, my antenna is, the weather here is", health problems, endless 10-10 contests, and other such nonsense that tends to make up the majority of contacts on the ham bands.

>For some reason, and I have yet to figure this out, you seem to
>love to troll along for flames. You must really love being at the
>center of attention. Probably comes from a deprived childhood.

If I were simply "trolling for flames", as you suggest, why would I have just spent a great deal of time stating my position and attempting to debate you in a civil and polite manner?

>If everyone out there would go to DejaNews.com and do a search for
>MNManiac you would see what I am talking about. What percentage of this
>idiot's posts are positive in nature, promoting the hobby of ham radio?
>Not too fucking many, i.e. none. This loser has started more of these

>stupid Radio Shack threads than I care to mention. Maybe RS wouldn't
>hire this complete social outcast. Smart move RS!!!

More personal insults, profanity, and unrelated comments.

>Lost your job at an AM station. Tough break. Freelancing on the
>internet not paying the bills? Well, keep your chin up, it can only get
>better.

Actually, I've done pretty well with my freelance voice work. Stations seem to like the idea of getting a professional-grade talent without having to hire an additional employee and pay today's exorbitant payroll costs (taxes, insurance, Worker's Comp, etc.) or deal with the ever-increasing regulatory burdens. A good idea if I dare say so myself.

>Brian

>By the way, I'm a dentist. I hope, for your sake, you don't ever end up
>in my chair!! Remember to brush and floss daily.

That makes two of us. Do you always threaten intentional malpractice against potential new patients? Perhaps the ADA as well as your local Chamber of Commerce should be made aware of this.

Try getting your five first then you can operate on the air. 40 cw is
great for upgrading. You'll find you crack the wall at 10 wpm quicker.
Computer programs for practice are good too. Take a set of headphones
to the ve session if it is usually small. If your the only one you can
copy on the phones,it's much easier. Good Luck.

Newsline has changed webs sites. It is now at www.arnewsline.org with its own domain thanks to the work of our Webmaster Dale Cary WD0AKO. Come over and have a look at our "new look" for yourself and download the very latest ham radio news. Also available are links to audio servers that present Newsline on the web in RealAudio, TrueSpeach and I-Wave.

As to script posting to the Internet; thast is not a direct function of Newsline, but is done through the volunteer efforts of Steve Coletti in New York on a time available basis. Be patient, it will arrive. If you need it quickly, go to the web page above.

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.
SEND TO: Photo Phoenix International

As always, we thank you. This ends the closed circuit with Newsline report number 1037 for release on Friday, June 27th, 1997 to follow.

(*****

The following is a QST

President Clinton acts to protect volunteers including hams from frivolous law suits and an accident in space silences the ham radio station on Mir. These stories and more on Newsline report number 1037 coming your way right now:

(*****

PRESIDENT CLINTON SIGNS "VOLUNTEER PROTECTION ACT"

"The Volunteer Protection Act of 1997" is now the law of the land. President Bill Clinton signed the bill, now known as Public Law 105-19, on Wednesday, June 18th. It becomes effective September 16,

The new law is aimed at shielding volunteers, including amateur radio operators, from lawsuits resulting from their activities as volunteers. For radio amateurs it means that those of you involved in such activities as administering tests under the all volunteer examination system, are now protected from frivolous litigation.

In general, the legislation will exempt a volunteer of a nonprofit organization or governmental entity from liability for harm caused by an act or omission of the volunteer on behalf of such organization. This, if the volunteer was acting within the scope of his or her responsibilities at the time.

Also, the volunteer has to be properly licensed or otherwise authorized for the activities or practice in the State in which the harm occurred. And that the harm was not caused by willful or criminal misconduct, gross negligence, reckless misconduct, or a conscious, flagrant indifference to the rights or safety of the individual harmed.

Another important exclusion is that the harm was not caused by the volunteer operating a motor vehicle, vessel, aircraft, or other vehicle for which the State requires the operator or owner to possess an operator's license or maintain insurance.

Obviously, this is just an overview. There are other exceptions and conditions that are far to lengthy to report here. In fact, we believe that it is important for every ham to read the fine print of this new volunteer protection act, so we are making it available for download at our website, That address is:

www.arnewsline.org

(Via FCC Release)

(*****

SPACE ACCIDENT TAKES MIR OFF THE AIR

Ham radio has become a vital link to the Mir space station following its collision with a Progress supply rocket.

Astronaut Mike Foale, KB5UAC, on board the crippled Mir space station is using ham radio during the crisis. It is a valuable supplement to normal NASA and Russian communication, providing an added link for Foale to use for direct contacts with fellow astronauts and managers in Houston.

The Mir ham radio station is not, nor will it be used for school or general contacts right now. Instead it's proving that ham radio, as always, is an invaluable aid to health and welfare communications during critical times.

Working through W5RRR, the club station at the Johnson space center in Houston, Texas, Foale reports that he is in good spirits. He asked for some personal items to be sent up when the next progress supply ship flies, and he had some good news: two of his major experiments are ok. They are in the Priroda module where he and the two Russian cosmonauts are living until repairs can be made, to hopefully, put the damaged Spektr module, or cabin, back on line. At that time, The Mir station should be able to resume normal ham radio contacts.

When a spacecraft called progress went out of control and crashed into the Mir space station it knocked a sizable hole in the side of the ship. The entire section called Spektr decompressed, its air spilling off into space.

Acting quickly, to save their lives, the crew sealed off that section, roughly one fifth of the space station.

The progress also smashed a solar panel and cut cables from 3 more panels, losing about one half of the Mir's electrical power supply, forcing the station to go dark to conserve electrical power.

Astronaut Mike Foale, amateur radio operator KB5UAC, and his two cosmonaut team mates are ok but they are working and moving very slowly as the ship is powered systems operate at about 50 percent of normal.

While Russia and the united states try to repair the aging Mir space station, it is safe to say that disaster has been avoided.

Repairs probably can and will be made, and ham radio will continue providing a personal link to help Mike Foale keep in touch with his home base.

More on the future of the Mir in next weeks newscast.

(Via NASA, Newsline)

(*****

MIR POLITICS

Just prior to the collision between the Mir and the supply rocket, ham radio operations on board the station became mired in politics once again following a third operating frequency change. There are international hard feelings that have developed over the frequency shift:

What frequency should the Russian MIR space station use for amateur radio communications? The answer depends on whom and where you ask. European hams say it should be 145.200 MHz for uplink and 145.800 for downlink. The German Amateur Radio Club known as DARC says it helped clear two widely used repeater channels throughout Europe to promote smooth communications with MIR. But those frequencies don't set well with American amateurs. They cite the presence of more than 100 repeaters with outputs on or close to 145.200. U.S. hams say that causes severe problems when trying to work MIR, especially on packet.

Last November, Mir changed frequencies, abandoning the popular simplex frequency of 145.550 and switching to the split frequency pair.

The U.S. based MIREX team, which controls amateur operations aboard the station, wants to use 145.985. That doesn't go over well with the Germans, they say it gobbles up frequencies used for satellites, including UO-22. The Germans lash out at users of 145.985, saying they see only their own interest and disregard other activities on that frequency.

Three times in less than a year, Mir's voice and packet frequencies have changed. And each time, there are complaints. On June 15th, operations switched to 145.985. That change was called tentative and experimental. Eight days later, the experiment ended. Miles Mann, WF1F, is MIR'S packet system operator. He says Mike Foale, KB5UAC, who's now aboard MIR, can use any channel he wants when he's over the U.S. And that includes 145.985. But Foale will switch to the 145.200/145.800 split pair when MIR is elsewhere.

Hard feelings over U.S. amateur radio frequency planning are obvious. The Germans call use of 145.985 an unfriendly act. They cite a lack of what they call reasonable national coordination and local repeater groups wanting the rest of the world to adapt to their specific demands. They say the American band plan contains peculiar and even unrealistic assignments.

Germans suggest that U.S. amateurs upgrade their bandplan before forcing the rest of the world to adopt American concepts.

This latest change of operating frequency was canceled on Monday the 23rd, just hours before Mir's collision with the Progress. And while it may now be a moot point regarding future ham radio operations from the Mir, no real solution has yet been found for the growing amount of ham radio two meter operations from space. Meanwhile European ham radio political leaders are saying that its time for hams in the United States to start honoring the internationally agreed on space to earth operating frequencies. This, even if it means vacating packet and repeater frequencies for this specific purpose.

(Via DARC, AMSAT-BBS, Newsline)

KORNIENKO TVI CASE APPEALED

A court decision in Lafayette Township, New Jersey favoring Walter Kornienko, K2WK, is being appealed. This, after Kornienko's neighbor lost their nuisance suit against him.

Leopold and Karen Korins had charged K2WK with being a legal nuisance because of their poor television reception and noisy telephones. The Superior Court Judgment was in Kornienko's favor, but the Korins have now filed an appeal to the Appellate Division of the New Jersey Superior Court.

The outcome of this appeal has the probability of impacting on more than 10,000 hams licensed in New Jersey. If lost, it could take many New Jersey hams off the air and set a legal precedent that could negatively impact on amateur operations nationwide. Because of this the ARRL has agreed to file a brief on the appeal as a "Friend of the Court".

In the meantime, it has cost Walter Kornienko over $10,000 in legal expenses to fight the case. To help, the local Sussex County Amateur Radio Club and the Frankford Radio Club, are trying to help raise funds for the appeal, and hopefully to reimburse Walt for some of the cost he has paid so far.

(Via Hudson Division Loop)

SPECIAL EVENT CALLSIGN DATABASE COORDINATORS

Clubs or other entities wishing to volunteer their services as Amateur Station Special Event Callsign common Database Coordinators should submit their requests in writing to the FCC at once. Database coordinators will

be selected by the Commission on the basis of their ability to coordinate, maintain and disseminate a common database.

The Amateur Station Special Event Callsign Database coordinators will be required to develop, maintain and assign calls from a common database.

For consideration, the request must be received by the Public Safety and Private Wireless Division on or after August 1st of this year.
Applications go to:

CDBC Request
Public Safety and Private Wireless Division
Wireless Telecommunications Bureau
Federal Communications Commission
Washington, DC
20554

(Via FCC Release)

(*****

LICENSING FORUM

The FCC has scheduled a public forum to discuss the Wireless Telecommunications Bureau's plans to replace its ten separate licensing application processing systems with a single, integrated system and database. The new system, called the Universal Licensing System or ULS, is expected to be on-line next year. The Commissions goals include expanding electronic filing capabilities and speeding licensing. The forum will be July 8, 10 AM Eastern time, in Commission Meeting Room 856, at 1919 M Street North West, in Washington, DC.

(Via ARRL)

(*****

N7ML NEW JOB

In news from the ham radio business community, word that longtime friend and former AEA cofounder Mike Lamb, N7ML, has been formally named director of marketing of the new AEA Division of Tempo Research. Lamb will work out of his office in Bozeman, Montana and will be responsible for marketing and sales.

The AEA line of antenna products, antenna analyzers, and the AEA trade name were purchased early this year by Tempo Research Corporation of Vista, California. L. Wayne Dewey, WD6AHZ, has been appointed product manager for the AEA division. He will direct customer service.

(Via Tempo Research, ARRL)

(*****

SSB ADDS MUTEK LINE

And SSB Electronic USA of Mountaintop, Pennsylvania, now is a dealer for the Mutek Ltd and the Parabolic AB product lines. Mutek Ltd manufactures low noise preamps and VHF and UHF transverters, plus a series of frontend replacement boards for several ham transceivers. Parabolic AB has recently introduced a new series of modular transverters.

(Via ARRL)

(*****

RAIN GOES REALAUDIO

Also, Hap Holly, KC9RP at the Radio Amateur Information Network in Chicago says that his website now features Rain programming in RealAudio. Hap says that he made the change to RealAudio from I-Wave because RealAudio is quickly becoming the defacto worldwide standard for Internet broadcasting. You can hear Rain programming on the web in RealAudio at:

www.rrsta.com/rain

(Via RAIN)

(*****

SAC CORRECTION

We did not intend to do it, but it seems that we at Newsline tried to relocate a rather famous air force base. As listeners to last weeks newscast will recall, a new radio club dedicated to memorializing ham radio callsigns associated with the Strategic Air Command has been formed by former SAC hams residing near Offut Air Force Base. And as some of you have probably realized by now. Offut Air Force Base is located near Belvue, Nebraska and not Bellevue, Washington as we erroneously reported. Our thanks to KE0XQ the Nebraska Section Manager, and to a lot of hams in the Omaha area for the correction.

(*****

THE OLD CHILSOM TRAIL

Meantime, a major operating event to celebrate a historic landmark of the old American west will soon be taking place.

It is a week long celebration to commemorate the 130th Anniverary of the Chilsom Trail which starts in Texas, runs through Oklahoma and ends in Abilene, Kansas.

Roger Wilson, KD0AY says that hams will be on the air all week long from July 14th to 20th and there's a special certificate for those who make contact with the special events station.

"The stations along the Chilsom Trail, which pretty much parallels U.S. 81 through the 3 states will be on the air. And we plan to offer a certificate for those who have made contact and send us their QSL card.

It is a week long event that begins on the 14th of July and will continue through the 20th of July. A Monday to a Sunday." KD0AY

Stations will be operating in the general portion of all bands, but mainly on 20 and 40 meters.

So tune in and listen. And join in on the celebration of the Chilsom Trail,

The old Chilsom Trail has been glorified in books, in motion pictures and even in song. Now its being honored by ham radio as well.

(*****

NORCAL CODE PRACTICE

Code Practice is back on the Las Cumbres Amateur Radio Club K6FB Repeater. Located high above Los Gatos, California and operating on 145.45 MHZ and requiring a 100 Hz access tone this repeater has coverage from the Pacific ocean eastward into the Sierras.

According to W6IQ who provides this on-air service, the time for the practice sessions is 8:30 pm Pacific time on Wednesdays. This practice is designed to eventually take beginners up to the Extra class speed of 20 words per minute.

(*****

DX

DX wise, word that HZ1CCA, in Riyadh, Saudi Arabia has been quite active on 40, 18 and 15 meters SSB. His operating times vary throughout the day, but watch around 7.060, 18.135 and 21.235 MHZ.

And the 599 DX Report says that N2OO, KF2BQ and N2LD will be on from the United States Virgin Islands from July 24th to the 31st. Their stay will include the IOTA Contest and activity on 160-10 meters CW and SSB. QSL to their respective home callsigns.

And congratulations to Vermont's Mike Seguin, N1JEZ for certification of his Worked All States. What makes Mike's accomplishment so unique is that his WAS is via satellite only.

Lastly, a new 6 meter beacon is now active from Brazil. It's on 50.080 MHZ signing PP1CZ every three minutes with three watts into a five element yagi beaming North. It's a good indicator of band openings between North America and our neighbors to the South.

(*****

NEWSLINE WEBSITE

It was bound to happen. Technology created it. Hams worldwide adopted it. Consumers devoured it. And life as we know it at Newsline will never be the same.

Used to be that your stories reached us at our post office box. Then, we added an answering machine for those late-breaking items. The wheels of progress brought us a revitalized facsimile service. And the question "do you have a fax machine?" became "what's your fax number?" And then, The Internet. Listeners started asking "what's your Internet address?" and "where can we e-mail?"

In true Newsline fashion, a number of benefactors began hosting unofficial Newsline sites carrying both our scripts and streaming the audio from our weekly QSTs. And those that assemble these newscasts provided e-mail services through their own private accounts.

A parallel track involved Newsline's editorial decisions. How exactly should complicated addresses, especially those Internet URL's be presented? And phone numbers? And fax numbers? We rewrote stories so the lead included asking you to get your pencils ready. You told us that didn't really work.

It came down to this: Newsline needs its own website with an easy to remember address. So get your pencils ready to copy our Internet address. It is:

www.arnewsline.org

>From there you can link to those text and audio sites that have been gracious enough to be our hosts.

Again, in true Newsline fashion, the cost of the website and the registration of the domain are contributions by some special friends of Newsline. For that we extend our thanks. We also want to recognize the hard work by our Webmaster, Dale Cary, WD0AKO, who made this all happen.

Finally, we want to recognize the support of all our Internet partners. In particular, the Red River Radio Amateurs who provided our first "official" web page. Tucson Amateur Packet Radio, www.tapr.org, provides Newsline in Real Audio; and Bill Levey, WA4FAT, at bro.net providing Newsline at any time in True Speech and Hank Armstrong, KI6JL who does the same in Internet Wave at his home on the world wide web. We look forward to our continued relationship with these fine folks.

We also urge our listeners to visit and support these sites. And if you didn't catch those URLs, point your browser to:

www.arnewsline.org

(Via Newsline)

(*****

With thanks to NASA, the FCC, the Hudson Division Loop and the American Radio Relay League, that's all from the Amateur Radio Newsline. You can write to us at:

Newsline
P.O.Box 660937

Arcadia, California
91066

Our e-mail address is:

newsline@ix.netcom.com

A reminder that the nominating period for the 1997 Newsline Young Ham of the Year Award closed at midnight on June 30th. For those of you hearing this announcement before that date it means you have until midnight on the 23rd to make your nomination. Nominating packages postmarked after the 23rd will be held for the 1998 competition.

Information on nominating a youngster can be found on our web page at:

www.arnewsline.org

or in the Ham Radio Club general interest files on America Online.

For now, with Bill Pasternak, WA6ITF at our editors desk, we at Newsline say 73 and we thank you for listening.

The following is late news about Amateur Radio for Radio Amateurs as prepared from NEWSLINE RADIO scripts by the staff of the AMATEUR RADIO NEWSLINE, INC., formerly the WESTLINK RADIO NETWORK. Amateur Radio Newsline is a audio news service distributed via telephone.

This hardcopy version is produced by Dale Cary - WD0AKO from scripts provided to him weekly by Newsline. It is then distributed to on-line services, bbs networks and internet user jointly by Dale Cary and Steve Coletti.

Editorial comments, news item and all other business should be directed to:

Bill Pasternak, WA6ITF
Newsline Producer & Editor

Thank You,
NEWSLINE

[1038]

C l o s e d C i r c u i t A d v i s o r y

According to our support fund administrator Andy Jarema, Newsline is once again in need of funds to continue operation over the summer months. As most of you know, the majority of donations go directly toward paying our monthly phone bills and electronic mail services. This is how we get the news, and it is how we deliver it to you. If we loose the telephone, the E-Mail or both, we will have no way to get the news and no way to disseminate it to you.

Simply said, we need the assistance of every listener who appreciates Newsline to help to keep it on the air. The Newsline Support Fund is separate from the service itself and exists for the purpose of channeling donations directly to the those providing services to the Newsline organization.

The address is the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

That ends this weeks closed circuit advisory with Newsline Report number 1038, for release on Friday, July 4th, 1997 to follow.

(*****

The following is a QST

The FCC takes to the sky to investigate interference to air Traffic Control and finds some of it coming from hams. This story and more on Newsline report number 1038 coming your way right now.

(*****

INTERFERENCE TO ATC

The FCC has been called in to investigate unintentional interference to aviation communications in the mid-west. Some of the interfering signals appear to be coming from ham radio operators.

Radio interference has been interrupting communications with aircraft over western Kansas. The Kansas City Air Traffic Control Center says that the safety of passenger planes and other aircraft has not yet been at risk.

The interference has been traced to paging equipment and commercial and private radio transmitters in three states by the has been severe enough to force re-routing of planes around the affected areas.

Specially equipped aircraft helped to trace the interference to pager towers, a radio station transmitter and privately owned transmitters in Junction City Kansas, a city in Oklahoma and Lubbock and Amarillo Texas. The interference varied from Morse code to squealing or static to conversations from cellular phones, regular telephones and ham radio operators.

Randy Downing, Airways Facilities Manager at the Air Traffic Control Center told the Associated Press and other media outlets that the problem has not yet been completely erased. The FCC has shut down some of the interfering transmitters, but the search is still on for other transmitters that are still causing problems.

If you live in the affected area you might consider getting your club to borrow or rent a spectrum analyzer and hold a radio tune-up day party. This to make certain that your transmitter and those of your friends are squeaky clean.

(*****

WEATHER EMERGENCIES

From the northern United States to deep in the heart of Texas, amateur radio operators stay busy, providing emergency communications. Radio amateurs in three states are being activated because of severe weather.

South central Texas has been inundated with rain, so much of it that the town of Regan Wells was cut off by high flood waters. Lee Besing, N5NTG says transportation and telephone service to the area were knocked out. That left amateur radio as a lifeline for the American Red Cross to use in providing disaster relief services.

Bexar county REACT volunteers provided communications support. That's where a linked amateur radio network called the Armadillo Inter Tie system came in handy. When owners of the system were told about the emergency, they immediately offered the network for emergency communications as long as needed. Using the 440 MHZ band, radio amateurs provided communications back to San Antonio.

For Wisconsin radio amateurs, endurance is the big challenge. When a severe thunderstorm watch was issued just before 2 a.m. June 21st, it was the beginning of 8 inches of rain, prompting a nearly 10 hour ordeal.

Skip Voros, WD9HAS, is the areas severe weather communications coordinator. He says record flooding hit Milwaukee's northside, prompting a net on the Milwaukee Repeater Clubs wide area coverage 146.91 repeater.

Club members, supporters and area hams relayed information on flooding, blocked streets, water depths and rainfall reports along with other severe

weather problems. Nearly 20,000 residents had no power. Despite its record length, Voros says the net ran smoothly, thanks to cooperation, coordination and courtesy.

In another part of Wisconsin, it isn't rain, but heat that's prompting a need for amateur radio support. A shortage of electrical power caused by hot weather has prompted Madison Gas and Electric Company to call for power conservation measures. All this at the same time that several power generating stations are off-line for maintenance. The power company says electricity must be conserved to prevent rolling blackouts in parts of the state. Jim Romelfanger, K9ZZ, says the alert has also affected amateur radio operators in the Madison area. They will be on stand-by, ready to provide emergency or back-up communications in case power is lost to certain agencies.

In this age of cellular telephones and other high tech communications, you may wonder why amateur radio services are still requested. Experience during recent disaster emergencies suggests that the newer communications technologies don't always provide all the needed services. Sometimes the new systems don't cover the areas affected, or become overloaded. But what makes ham radio perhaps most valuable is the people, nothing seems to beat skilled operators with emergency communications experience.

(Via N5NTG, WD9HAS, K9ZZ)

(*****

GMRS

The Federal Communications Commission has assigned Rule Making Number RM 9107 to a petition filed late last year by Ken Collier, KO6UX to bring back organizational licenses to the General Mobile Radio Service or GMRS. The petition would allow charitable organizations, those with 501(c)3 tax exempt status, to apply for new General Mobile Radio Service licenses or make their existing grand-fathered licenses once again active. Collier says that if the rule making succeeds it would mean that REACT teams, Red Cross chapters, SATERN groups, and other organizations interested in public service communications would be able to acquire licenses that cover everyone in the organization. For more information on RM 9701 contact Ken by e-mail to ko6ux@netsol.com.

(Via KO6UX)

(*****

ARRL TO FCC: KILL ANTI-THEFT SYSTEM PETITION

The ARRL says there is no justification for the FCC to consider increasing power limits or expanding the frequency range of Part 15 anti-theft systems that operate on the high frequency bands. Commenting in response to a Petition for Rulemaking from Checkpoint Systems Inc., a manufacturer of the theft-deterrent devices, the League said the proposal was "technically baseless" and "fails to account for the extremely high

interference potential" to licensed services. Under FCC rules, Part 15 devices must comply with specified radiation and emission limits and protect licensed services from harmful interference.

(Via ARRL)

(*****

VANITY CALL SIGN GATE 3 OPENS AUG 6

Vanity call sign gate 3 will open on August the 6th. This, according to the FCC which says that Advanced class hams will be able to apply for a callsign appropriate to their license class on or after that date. Applicants must file either on a paper FCC Form 610V or electronically via the FCC's Web site. Either way, there will be a $30 fee.

The August 6 deadline squeaks under the implementation of the FCC's new fiscal year 1997 fee schedule, adopted June 16. Under the FY 97 schedule, which becomes effective September 16, 1997, the vanity application fee will jump to $50 a year.

For an in-depth look at what's required, we suggest you take your web browser over to the ARRL website at:

www.arrl.org

and click on W1AW Bulletins. There you will find a two part bulletin giving all the information you need to know to file properly. You can also reach the ARRL website on a direct link from the our website at:

www.arnewsline.org

Again that's August 6th for the opening of gate 3 of the Vanity Call Sign program for Advanced class amateurs. No word yet on when gate 4 will open for everyone else not covered under gates 1 through 3.

(Via FCC Release)

(*****

STS-94 LAUNCHED

When the space shuttle Columbia was launched from Cape Canaveral on July 1st, it was the first time that the same crew of astronauts flew twice! Last April when the Columbia was forced to land prematurely when a fuel cell broke down. So NASA decided to refly the mission as STS-94 and three of the crew of seven astronauts are Amateur Radio operators.

Jim Halsell, the commander is KC5RNI. Mission Specialist Janice Voss is KC5BTK and Don Thomas, another mission specialist, is KC5FVF.

It is a SAREX mission, using voice only on a main downlink frequency of 145.55 MHZ while over the United States. As this is the last SAREX mission of 1997, seventeen schools are scheduled foe contacts, including one in the Peoples Republic of China.

NASA plans STS-94 to be a long duration mission of sixteen days on orbit. This will lead to a landing in Florida slated for the 17th of July.

(Via Newsline)

(*****

MIR STATUS

While SAREX continues to cruise comfortably in orbit, Astronaut Mike Foale, KB5UAC aboard the Mir Space Station sends this message to all hams. Thanks for all your good wishes.

Shortly after an accident that crippled the Mir Mike managed to get on the air. Using ham radio to supplement his normal NASA and Russian communications channels. He talked to fellow astronauts, NASA managers and his family through the Johnson Space Center Amateur Radio Club in Houston.

At that time it was assumed he would not be able to make general QSO's using the Mir ham station because electrical power was in short supply. But Mike has been on the air ever since. Using packet and voice to share his experience with other amateurs all over the world.

He told Dave Larson, N6CO that he simply tapped the power from the main supply and nobody voiced any objections.

He said, It looks like we are back in business, less one module.

Foale and his team mates, two cosmonauts have stabilized their spacecraft and they are waiting for a supply ship to arrive next week. Bringing supply cables and a specially devised plate to fit over the hatch of the Specter Science module.

The accident made a hole in that module. It has been sealed off and depressurized ever since. This crew will try to make cable connections to get the station up to full power.

Another crew will fly up in August to seal the leak to put the Specter module back on-line.

Mike and the cosmonauts also are working on their new but faulty oxygen generator and to get it back on-line. They are using incendiary candles to supply oxygen temporarily.

The cosmonauts also began practicing their repair work. But they and Foale have still have a lot of time on their hands. And much of that is spent in darkness to conserve electricity. So Mike is on the air a lot.

Miles Mann, WF1F says Mike told him the crew spends much of its time looking out the window, at the universe around them.

An American ham radio operator is operating an amateur radio station provided by the German SAFEX organization controlled by the Russian MAREX group communicating through the SAREX and MIREX working groups here in the United States. To provide a link for health and welfare traffic. It really is a remarkable demonstration of what can be done by the nine nation

group now planning for ham radio aboard the International Space Station in a couple of years.

Matt Bordelom, the SAREX principle investigator and his team are handling the contacts in Houston. He reports that Mike and his team mates in orbit are in good health and good spirits.

Frank Colbertson, the NASA / Mir mission chief says that if the repairs are successful, American Astronauts will continue flying in Mir while the space sation is assembled in orbit. The mood in Houston remains optimistic.

Mir, however, still is a space station in trouble. Mike Foale is providing amateur radio an intimate view of the danger and the drama as the crew fights to save it.

We asked Mike when and where the amateur fraternity can look for KB5UAC. He plans to operate frequently when ever NASA and Moscow are not using their main channels of communication. Look for him on 145.800 MHz operating split. Occasional over the United States. You also may find on 145.985 simplex.

AMSAT and SAREX bulletin boards provide information on when and where to listen.

More on this aspect of ham radio and Mir in future Newsline reports.

(Via Newsline)

(*****

MIR COMMUNICATIONS

Another United States ground tracking station has been upgraded and is on-line to assist in Mir to Earth communications. According to Astronaut and ham radio operator Ron Parise, WA4SIR, the antenna system at Wallops has been changed to a quad yagi. Also the RF system has been upgraded as well. According to Parise' posting on the AMSAT BBS, look for additional Mir support through White Sands beginning this month while an update on the gear at the Dryden Spaceflight Center at Edwards Air Force Base in California goes toward completion.

(Via AMSAT-NA BBS)

(*****

A NEW ARRL VHF NEWS PROGRAM

Look for the possibility of yet another VHF oriented ham radio voice news bulletin service to premiere later this year. This one sponsored by the American Radio Relay League.

The ARRL has sent a survey to a random sampling of affiliated clubs who operate repeaters or local nets, and to Bulletin Managers and Official Bulletin Stations. This to ask their help in deciding the best way to

offer an expanded on-air news service that the League provides.

The survey itself appears to be a staff response resulting from Board action taken at an ARRL Executive Committee meeting in St. Louis, Missouri earlier this year. There, the Directors gave marching orders to the staff to complete plans for what can probably be best described as a Newsline like service. They were told to have a report ready for consideration for the Board of Directors when they meet this summer.

It's believed that a majority of the Leagues' Directors favor the creation of a VHF oriented voice service. This, in the hope of reaching the ears and minds of the many codefree Technician class hams who do not bother to listen to ARRL high frequency bulletins or read current League news and information.

Many if not most no-code Techs live on one repeater and do not even know that a United States national ham radio society even exists. The ARRL leadership appears to see a voice news service as one way of reaching this large yet isolated group and possibly getting some of them to join in and become more involved in the ham radio community. Such a service would probably not replace the voice bulletins now aired on high frequency bands by the League's W1AW service. Rather, most observers feel it would be operated as an adjunct to it.

So, if you hear from anyone who has received a survey form, please encourage that person to respond to it promptly. Or, if you have any thoughts on the matter yourself, you might want to drop your Director a note to let him or her know your ideas. This will give the ARRL leadership the best information from which to base a decision when the Board meets in a few weeks.

If the ARRL does decide to become a telephone or satellite delivered voice news provider it will be competing with almost a dozen other international, national and regional services already in operation for hams to choose from. In addition to Newsline on the phone lines and the web there is "The RAIN Dial Up" in Chicago, "Amateur News Weekly" out of Cincinnati, and "Eastlink" from Philadelphia. Meantime the satellites deliver the weekly "Houston AMSAT Net" and "This Week in Amateur Radio" from Albany, New York. This, to mention only a few.

(Via Newsline and several local ARRL Section notices)

(*****

NEWSLINE/TAPR CELEBRATE REALAUDIO PAGE

And speaking about ham radio news, word from Greg Jones, WD5IVD over at Tucson Amateur Packet Radio that within the next two or three weeks their website that hosts the Newsline RealAudio service will exceed the number of accesses that it had in all of 1996. The counter shows that in 1996 the page was accessed by 23,000 people. And while it is half way through 1997, already over 22,000 have been in to listen so far.

Now, its true that any one person can and probably does access the page more than once a year, but neither TAPR or Newsline are complaining. It shows that both their service and ours of have a growing audience. If trends continue as they are, the Newsline RealAudio page hosted by TAPR will probably be able to boast close to 50,000 hits by years end.

To find the TAPR site go to:

www.tapr.org

or to our home page at:

www.arnewsline.org

and click on the Realaudio link to TAPR.

(Via TAPR)

(*****

WEBPAGE LIST UPDATE

While on the subject of the web, Mark Downing, WM7D is asking amateurs with e-mail addresses, and web pages to help update his database. So far, Marks' WM7D Callsign Database includes nearly 800,000 hams from the U.S. and Canada, along with e-mail addresses, web pages, and even QSL manager information. If you have email, web, or QSL manager information, please contact Mark. Contact him by e-mail to:

wm7d@wm7d.net

or on the web at:

www.wm7d.net

(Via WM7D)

(*****

SHORTWAVE NEWS

More problems for shortwave broadcasters as satellite transmissions and internet audio vie for its audience. Italy's Radioicontro newsletter says Radio Australia could be the latest to fall victim to the latest technology. The shortwave newsletter says that the continued presence of Radio Australia on shortwave is very much in doubt, but the service has support.

Late word is that someone in Australia's Ministry of Communications has stated that everything to save the external service of Radio Australia must be done because of its unique and significant presence in that region of the Pacific. At air time the Ministry is reportedly considering the possibility of continued reduced power transmissions by the service.

(Via Radioincontro)

(*****

BIKE RIDER HAMS

Hams across Canada are being asked to help track of a bicyclist. Dr. Andries Botha left Vancouver on June 21st in hope of completing a 4,300 mile ride in 20 days. That's an average of 217 miles every day.

Roy Nystrom, VE6ATN, has asked the Amateur Radio community to help track Botha as he travels his route. Those spotting Botha should message Nystrom on 7.055 MHZ or via e-mail to:

rnystrom@telusplanet.net

A precise itinerary is not known but Dr. Botha should be wearing a black jacket that reads "Coast to Coast in 20 Days.

(Via RAC, ARRL)

(*****

DX

In DX, the group of N4GN, OH1NX and OH2BH will arrive on the Aland Islands on Monday, July 7th and plan to put two stations on the air. The operation will be carried out from the famous OH0W site with stacked beam antennas and a clear horizon over the open sea in all directions. Two Yaesu FT1000MP stations with Alpha 91B amplifiers will be used. QSL via:

Tim Totten, N4GN
8309 Dawson Hill Road
Louisville, KY
40299-5317

And the long awaited CY9AA operation came to life on June 27th at 03:00 UTC. The prediction of good weather was premature. The landing was made in gale force winds and drenching rain. It was every bit as difficult as expected and it took over 9 hours to get a vertical and dipole up and get on the air. The operators are wet and bruised, but there were no major incidents. When they came on the air they were active on 40 CW and 20 SSB with good signals into the West Coast of the U.S.

And be sure to mark your calendars for July the 12 and 13th for the Internet 6 Meter DX Contest. Take your web browser to:

www.uksmg.org/awards

for information and contest rules.

(Via various DX newsletters)

(*****

EINSTEINS CAT

This from our legend has it file. In this case legend has it that when asked to describe how radio works, Albert Einstein put it this way:

"You see, wire telegraph is a kind of a very, very long cat. You pull
his tail in New York and his head is meowing in Los Angeles. And radio,
said Professor Einstein operates exactly the same way. You send signals
from here and they receive them over there. The only difference is that
there is no cat."

(Via Usenet)

Hi all,

My homepage is getting bigger and will continue to do so until
Telenordia tell me I have run out of disk space on the server.
You can find my homepage at:

http://user.tninet.se/~acz732k/

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)
250mW HF bands CW TX
4 watt PS for the above
5 watt CW TX - dead easy to build
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX

3 watt linear 1 - 30 MHz
Phasing method SSB exciter
500 watt linear amplifier
April 1st transmitter

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components
Stereo enhancement for HF CW
CW filters
Self tuning CW filter
Q-multiplier
CW keyer using 'relay logic'

DATA/INFORMATION
QRP frequencies
Measuring micropowers
Making PCBs, several methods
G0TLAs QRP circuit database on packet
Coil winding and 'turns' calculation.

DOWNLOADING
Signal generator program
All my QRP@WW circuits in a ZIP file
PCB foil for BUG TX (later version)
'Adult' screen saver

BREWING BOOZE
Brewing beer, wine and 'mash'
Distilling the mash (3 methods)
Making liquours

---------- and more ----------

I will be adding more to the homepage constantly, as long as
I have the time available to do it.

Have fun with QRP (and QRO) de Harry, SM0VPO, Upplands V&#65533;sby.

For those on the divorce support group and most ham radio
operators they live to eat. Many look like dirty balloons.
When you lose your spouse look in the mirror and if you see
fat folds you ought not be surprised that the opposite sex
is revulsed at the side of you. Does your spouse think of
you as the Crisco Kid?
Fat is almost always a character issue and cut the BS
about a thyroid condition, in most cases that is an excuse.
And losers NEED excuses.

http://www.jpl.nasa.gov

Mars Pathfinder Mission Status
July 5, 1997
11:50 p.m. Pacific Daylight Time

Mars Pathfinder's robust, 23-pound rover named Sojourner successfully rolled off its ramp
tonight and onto the Martian surface, becoming the first robotic vehicle ever to explore the surface of
another planet.

The first image showing Sojourner with its six wheels firmly planted in sandy Martian terrain was
received on Earth at about 10:59 p.m. PDT. The rover team did not know immediately what time
the rover actually set foot on Martian soil. Rover deployment occurred within 10 minutes of Earth
set, at which time telecommunications on Mars ceases as the Earth disappears below the horizon.
Two-way communications resume at about 11 a.m. PDT on Sunday, July 6.

The operations team examined a set of black-and-white images showing the ramp deployment
before activating the command sequence to deploy the rover. More than 90 frames coming down
during an 8 - 9:15 p.m. PDT transmission showed that both ramps were situated at angles well
within the limits of safe deployment. The rover team sent Sojourner down the rear ramp, or the ramp
on the right side of the lander, which was tilted at just 20 degrees from the surface. The rover would
not have been able to roll off the ramps had they exceeded a 30-degree tilt.

Sojourner made the trek down its ramp in two stages, first crawling half way down the ramp
and stopping to take a photograph of the ramp, then continuing its

4-minute journey off the ramp.
Additional images showed rover wheel tracks in soft Martian soil and the rover standing about 10
centimeters (0.3 feet) from the end of the ramp. The lander's camera also took photographs of the
rover's exit. Once off the ramp, Sojourner unlatched its primary science instrument, an alpha proton
X-ray spectrometer, and positioned it face down in the Martian soil to take 10 hours of
measurements overnight.

The first science investigations beginning on Sunday, July 6, the third day of surface operations,
are likely to include a soil mechanics experiment to observe how the rover's wheels and mobility
system operate on the Martian surface and a rover photography session to create a "monster pan" of
the surface in multiple color, high resolution format. The operations team also plans to increase
Pathfinder's data rate to 6,300 bits per second to retrieve as much data as possible over the next
week, which marks the primary lifetime of the rover.

A press briefing to announce science activities for day three is scheduled for 10 a.m. PDT on
Sunday, July 6, in JPL's von Karman Auditorium.

The public is encouraged to follow Mars Pathfinder mission activities via the World Wide Web
by visiting the Pathfinder site at: http://mpfwww.jpl.nasa.gov.

We are a New York based international literary agency with two branch offices, one of which is in Florida. We are seeking new and> previously published authors, so please adhere to the following-- guidelines.

All fiction: send brief <synopsis, first chapter, and include a self addressed, stamped envelope (SASE).
All nonfiction: brief synopsis, first chapter, SASE.
Short-Stories: brief synopsis, 3 pages, SASE.
Poetry: send 3 poems, SASE.
Please do not send complete manuscript unless we ask for it.

Send to: Woodside International Literary Agency>>
=33-29 58 Street>>>>>>>>
=Woodside, New York>>>>>>>>
=11377>>>>>>>
=Phone (main office):
=718--651-8145>>>>>>>

When did you pass your 20wpm test, Spew?

Oh.. you meant your 5wpm code test. A test which, if you have a halfway
decent memory, is akin to having a conversion table sitting next to you
so you can translate all the dits and dahs you hear....

>Please provide proof of this. To accuse someone publicly of "lying" is a
>rather serious accusation. In the legal sense, it could well be grounds
>for a libel and/or defamation suit if the individual making the accusation

It is legal for the Tech, Tech Plus and even for the Novice if they
happen to be using frequencies they are licensed to operate. Where
those frequencies are linked to does not matter so long as the control
operator of the linked transmitter has the appropriate license class
and operates the appropriate mode(s) on the linked frequency.

Better check with the VEs first!I studied with tapes and
headphones.At exam time they wouldnt let me use the headphones!!The
piece of junk tape recorder/player(cracked speaker,I think) they used
sounded totally different from what I had been using but,,,,I passed
anyway!!!
Good Luck!!

>

I would be willing to wager that you would be one of the first, if not
the first, person to upgrade to Extra when the Morse requirement is
dropped. That is if they also dropped the written requirement as well.

> "I had to do it, so they have to do it, too."

No, no, no. I have NEVER said that I am in favor of keeping the code.
All I said was that as of today, you have to know code to operate on
the bands up to 10m. If you want to petition the ARRL and whoever else,
go ahead. More power to you. But, I have seen postings by YOU, telling
would be new hams to forget the code. These are in reply to one of
their questions as to what tapes or CW programs to buy to help them
learn the code. Why try to extinguish their desire?? I believe if you
want to stay no code tech, fine. But, don't try and keep someone else
from getting the license they want. These people were trying to find
out how to get into ham radio, or the best way to upgrade their current
license. You pretty much told them to just sit back and wait, that the
code would go to the wayside and the bands would be wide open.

> You miss the point totally. I'll say it again: Morse Code knowledge is
> irrelavent for the purposes of obtaining any government-issued radio
> license in the year 1997.

And I'll say it again: I agree with you on the point of Morse code.
Just don't turn off other people who have the desire to learn it. Your
replies to these "what is the best program to learn CW" posts have been
to tell them to forget it. What kind of answer is that. If you don't
have a valid answer, be quiet. That will save a lot of bandwith. These
people want to enjoy HF now. It only takes a month or two to learn CW.
Then, they are on the air. Who knows how long they would have to WAIT
before the CW "hazing ritual" is gone.

> You want me and others who believe as I do to simply "shut up" and accept
> things as they are, rather than fight to change them. Sorry. There are
> millions of hams of ALL license classes who feel as I do. We will not
> "sit down and shut up", bowing to the wishes of the ARRL and others like

> them who wish to keep HF locked up as their own private club, complete
> with Morse hazing rituals required in order to gain entry.

Again, and again, and again. Petition the ARRL, write your congressman, write and petition whoever you please, just leave those who want to upgrade or enter the hobby alone. Give them some help, answer their questions, but don't shoot them down before they even get started. Just think Drew, if these people all got their license, you would have more people to sign your petition.

Source record: 194045

Hi all:

I'm experiencing a problem with my TS430S and was wondering if any other owners/users of same have had similar problems.

It seems that I get intermittent full power or intermittent SWR problems. If I key down, sometimes I get almost no power out and then all of a sudden after 2-4 seconds, pow, full power. This happens on a regular but random basis. Any ideas, suggestions, similar experiences, etc???

You can post here or feel free to email me <shaggy@redrobin.oswego.edu>

Thanks, 73

516. Re: CBers on 10 meters?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-07 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19970707020200.WAA10501@ladder01.news.aol.com>
Source record: 194047

In a previous article, n7zzt@psn.net ("Eric Oyen") says:

>Personally, I think the 11 meter band should be returned to amateurs for
>AMATEUR use only and to relegate all CB operations to the old service in
>460 MHz. Give them 440 kHz of spectrum there (for use with AM/SSB and
FM).
>Perhaps then, we might dispense with the junk and splatter and the loads
of
>QRM that occur on a daily basis all over the US.

I suppose the millions of 11 meter operators worldwide are simply going to shut their radios off, take down their antennas, and say "Sure, we'll move to UHF so that the hams can have our frequencies."

It's a black military(?) key, large knob about 1" high, larger at the top. There is a base below the knob that is about 1" round. From the knob. the lever goes straight back for about 1.5" with a 1/4" rise. Then the lever becomes horse shoe shaped. In between the horse shoe are the adjustment screws. Behind that is a black plastic cap that covers the connectors. On the left hand side is the sequence: CJB26008A

Thanks in advance for any information.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v2.3, 1 April 1997

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added entry based last updated field.
bpf - filter calculator
BayBox - Packet BBS
digiinfo - digipeater information database
Contest logging program
Chirp contest logger
bip
```

pileup
twclock
DX Cluster watcher
F6FBB BBS

Corrections/Updates:
Changed all ftp: url's to point to the directory rather than the file.
CLX, and just about everything else.
Updated location of John Gotts mirror.

ToDo:
find a way of automating this, or find an alternate means of
presenting this information.

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www-personal.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linux/HOWTO/HAM/HAM-HOWTO.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too.
I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.91 released.

Updated
01 Apr 97

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 4.0 is a fully commercial release. Version 3.1.5 is the last freely available release.

Updated
01 Apr 97

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the

Moon are also provided. Future releases will provide more options. SatTrack requires about 5MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

Where and How to obtain it.
The commerical version of SatTrack can be found at: SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

The free version of SatTrack may be found at: ftp.jvnc.net <ftp://ftp.jvnc.net/priv/kupiec/sattrack/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/>.

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required. Version 4.0 is a fully commercially supported release.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

Updated
01 Apr 97

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the

system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict.tgz from: amsat.org <ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

```
# cd /
# tar xvfz dove.tgz
```

Where and How to obtain it.
You can obtain dove.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

Updated
01 Apr 97

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.

Status
Working

Updated
01 Apr 97

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. F6FBB Packet BBS

Author
Jean-Paul Roubelat, F6FBB, jpr@f6fbb.org

Description
Fully Features Packet Radio BBS system with X11 Windows interface

Status
Version 7.00b45 is Beta.

Updated
01 Apr 97

System Requirements
Kernel based AX.25/NetRom/Rose network configuration. X11 windowing system for the X11 version.

Detail
This is a port of the well known F6FBB Packet Bulletin Board system to Linux. The BBS supports connections from AX.25, NetRom, Rose and TCP/IP and offers all of the features you'd expect from the product. The optional X11 interface provides a nicely presented sysop interface.

A mailing list for F6FBB is available. To subscribe send a mail message to: majordomo@f6fbb.org with the line `subscribe xfbb' in the body of the message. The mailing list is archived at zone.pspt.fi <http://zone.pspt.fi/archive/fbb/>.

Where and how to obtain it
You can obtain the F6FBB package from its home site at: F6FBB Home Page <http://www.f6fbb.org/>.

Licensing/Copyright etc.
The F6FBB software is frelly available for non-commercial use.

5.2. DX Cluster Watcher

Author
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

Description
Displays DX information passively received from a DX Cluster Node.

Status
Version 4, stable.

Updated
01 Apr 97

System Requirements
Requires Kernel based AX.25 configuration.

Detail
The DX Cluster watchers listens to the DX Cluster traffic on your frequency, captures it and displays it in a coloured text window. It conserves traffic on the frequency by not requiring you to actually connect to the cluster node.

Where and how to obtain it
You can obtain the DX Cluster Watcher from the: DX Cluster Watcher Home Page <http://ing49.unife.it/~iz4ako/project_inglese.html>.

Licensing/Copyright etc.
GNU GPL

Contributed by
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

5.3. Digiinfo

Author
Ported by Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

Description
A database of packet radio network information.

Status
Version 2.5.1 is stable.
Updated
01 Apr 97

System Requirements
No special requirements.

Detail
digiinfo was a program initially written for the Atari by
Karsten DC7OS. Digiinfo is a database program for displaying
information about the packet radio networks.

Where and how to obtain it
You can obtain the digiinfo package and database from its home
site at: www.vdazone.org
<http://www.vdazone.org/~dl5mlo/digiinfo/>.

Licensing/Copyright etc.
ALAS, Amateur only license

Contributed by
Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

5.4. BayBox BBS

Author
Flori Radlherr, DL8MBT, flori@t-online.de

Description
A Packet Bulleting Board System for Linux.

Status
Version 1.38, stable.

Updated
01 Apr 97

System Requirements
Recommended hardware is 80486/33Mhz with 8MB RAM

Detail
Unfortunately the documentation is in German and I'm unable to
understand most of it. I get the impression though that this is
a BBS that supports all of the usual features on a packet radio

bbs, forwarding etc, but the documentation seems to suggest that the Linux version supports telnet access only. This isn't really a big constraint, as you can easily configure a session under the Linux ax25d program to accept AX.25/NetRom/Rose connections and connect the BBS via telnet.

If you're able to help by giving a better description, I'd appreciate it.

Where and how to obtain it
You can obtain the BayBOX from its home sites at:
members.aol.com <http://members.aol.com/baybox/>

Licensing/Copyright etc.
The BayCom-Mailbox software is intended for usage in amateur radio context only. Any usage outside of the amateur radio AX.25 network, especially commercial usage or distribution is prohibited. Within the scope of this limitation, usage and copying of the BayCom-Mailbox without fee is hereby granted. In any case of usage, the software is provided "as is" and comes with absolutely no warranty, neither implied nor expressed.
Contributed by
Iztok Saje, S52D, s52d@s55tcp.ampr.org

5.5. JNET

Author
Takeshi Shoji, JF2CEX, taka@myk.ilc.or.jp

Description
An enhanced version of KA9Q NOS for Linux and other platforms.

Status
Version 961210, Stable, released.

Updated
01 Apr 97

System Requirements
No special system requirements, requires KISS TNC.

Detail
This another actively maintained derivative of the KA9Q NOS package. This version has been ported to a wide range of alternative platforms and offers some enhancements not available in other NOS derivatives. A small catch is that most of the documentation is in Japanese.

Where and how to obtain it
You can obtain the latest version of JNET from its home site at:
www.myk.ilc.or.jp
<http://www.myk.ilc.or.jp/~taka/software.html#jnetcex>.

Licensing/Copyright etc.
I'm actually not sure. I suspect though that as a NOS derivative
it is freely usable by amateur radio operators.

Contributed by
Isao SEKI, http://www.prug.or.jp/people/jm1wbb

5.6. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

Updated
01 Apr 97

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan manager could use to analyze and manage traffic. The tools present a graphical view of all of the traffic received at the monitoring node allowing the observer to easily see where the traffic flows normally and other information such as:
• Packet counts

• Node statistics

• Network Utilisation figures

The network is displayed with icons representing hosts and lines
between them representing the traffic flow. The graphical
display provides an instantly absorbable view of the traffic on
the network being monitored. Richard has more information and
sample displays at: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.7. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.11, Stable

Updated
01 Apr 97

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.8. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

Updated
01 Apr 97

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you
use the splitscreen program to access services like convers.

Where and how to obtain it
The `splitscreen' package is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright etc.
Public Domain

5.9. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
Version 960426, working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from:
ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be retained.

5.10. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The `7pl217sr' encoder package is available from:
sunsite.unc.edu ham applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.11. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features many enhancements not found in other NOS versions.

Status
Version 2.21. Stable.

Updated
01 Apr 97

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/unix/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.12. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.
Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

Updated
01 Apr 97

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a
compatible set of commands with the RLI bbs so users will be
familiar with it immediately. It then extends the command set
to be a very nice natural language style interface (e.g "list at
allus about KPC-3"). Many csh style bang commands are supported.
Also included is a mail interface to provide a packet to
internet gateway.

Currently you need to customize the source code for your
installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to
rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com.
This code is not packaged for distribution yet since it is not
past the alpha stage of development.

A version of the software is available from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/n0ary/>

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.13. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25
kernel code or with the Wampes package.

Status
In development, working.

Updated
01 Apr 97

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could
build a Packet BBS to smtp gateway for Linux. I'm not sure what
the current status is as the last version I could find was dated

30 Jun 1995. The latest binary version supports:
• MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain the `LBBS' package from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.14. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

Updated
01 Apr 97

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.15. CLX Packet DX Cluster Program

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Current version 2.07

Updated
01 Apr 97

System Requirements
Linux Kernel version 2.0 or greater, TCP/IP networking, SysV IPC. Also requires Perl and optionally Expect.

Detail
PacketCluster nodes have been available for about seven years. The original software was written by Dick Newell, AK1A, and is running under DOS. CLX is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical. Remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and CLX. So it fits well into an established network of PacketCluster nodes.

CLX is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from a users point of view. It allows multitasking and different priorities.

• The software detects looping DX spots without generating endless messages. CLX filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". CLX knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by CLX users.
• An interface for extending CLX with your own programs and applications.

• Extended connectivity through the use of connect scripts. CLX now can build up and maintain virtually any connection using TCP/IP, UUCP or any other communication programs.

• CLX uses modern programming concepts like shared memory for common data, lex and yacc to implement command language, shared libraries to keep binaries small, remote procedure calls for interprocess communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises of several modules running as separate processes.

Where and How to obtain it
You can obtain the software from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

00Index
clx_206.tgz
clx.txt
README

Licensing/Copyright
CLX (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to clx_us@dl6rai.muc.de to organise this.

Contributed by
Bernhard ("Ben") Buettner, DL6RAI

5.16. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU,

wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS,
DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

Updated
01 Apr 97

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than
the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text
to files. You can log transmit, receive or both to a log
file. You can overwrite or append received data to existing
files. You can use the `autobin' protocol to transmit or
receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can
access other programs on your computer. You can also run a
program and direct its input/output to a channel so that
users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a
device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do

so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

New versions will support the Linux kernel AX.25 code.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
The `dptnt' package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.17. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an

IPIP encapsulating gateway. Note, this probably isn't necessary any more in most installations because recent kernel support a kernel device to perform encapsulation.

Status
Ron is running this code himself, and the other version have been run quite successfully.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.18. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsulating gateway.

Status
Not properly tested, but assumed to work ok.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>. An enhanced version of this software is included in recent versions of the Linux AX.25 utilities. Refer to the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html> for more information.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.19. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de, and Brian Lantz brian@lantz.com.

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics. Brian Lantz has further enhanced the software with additional features.

Status
In use of a number of popular convers servers, appears very stable.

Updated
01 Apr 97

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL
file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of
the software is at insu1.etec.uni-karlsruhe.de ftp server
<ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated),
but some portions appear to be free for non-commercial use and
copying provided the copyright notices stay intact.

5.20. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing
protocol for linux. The daemon supports version 2.2 of the
protocol which corrects a lot of bugs and problems that were
present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version
is 0.08

Updated
01 Apr 97

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It
addresses some of the quirks of RSPF v2.1, the version in NOS
which means that it is incompatible with the NOS version. It
will also allows remote/local queries via a tcp session for
debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.21. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

Updated
01 Apr 97

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.22. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and convert it into a talk request for a user on the host machine. This may also be configured for use with the ax25d program so that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

Updated
01 Apr 97

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't actually defined anywhere (except the source), the ttylink protocol from NOS has become the defacto standard, at least for amateurs, to provide keyboard to keyboard communication over tcp/ip. This daemon fills the need for something to answer ttylink requests to linux machines.

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

An slightly enhanced version of this software is now included in the Linux AX25 utilities package.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. Pileup

Author
Richard Everitt G4ZFE richard@babbage.demon.co.uk. Based on sccw by Steve Merrifield.

Description
CW pileup training program

Status
v1.0. Stable but extra development planned.

Updated
01 Apr 97

System requirements
Linux supported sound card

Detail
CW pileup trainer (similar to PED) based on sccw. Up to 9
stations calling at once with variable CW speed and tone/volume
to simulate a pileup. Callsigns are taken from the 1996 CQ WW
CW contest entry of M6A to add some realism.

I fed /usr/dict/words to the program and it was quite a chuckle.
So even if you aren't into Morse it is worth trying out just for
the giggle.

Where and How to obtain it.
You can obtain the pileup package from its home site at: Pileup
Home Page <http://www.babbage.demon.co.uk/pileup.html> or
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

Contributed by
Richard Everitt G4ZFE richard@babbage.demon.co.uk.

6.2. bip

Author
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr. 24 rue de
l'Oasis, 92800 Puteaux, France

Description
A program to learn Morse code (for various Unix-like platforms)

- --- END Linux HAM HOWTO part 1/2 ---

*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Status
Production release

Updated
01 Apr 97

System requirements
Works on many Unix-like systems, including Linux. On linux it
works with or without X11 or a Soundcard.

Detail
bip offers a very wide range of options that make it very
suitable as a code practice program. It can send text from text
file or random character groups but it has a range of other
features. Some of these are
```

- Morse compliant with ARRL specification
- adjustable volume and tone
- adjustable speed, including Farenheit method
- Jitter feature to simulate hand sent morse

```
Where and How to obtain it.
Not available online, but anyone can write to
Marcin.Skubiszewski@inria.fr for a copy of the source code.

Licensing/Copyright
Shareware $10.

Contributed by
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr.

6.3. cw2hex
```

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.
Status
version 1.1 is tested and ready to go.

Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.4. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

Updated
01 Apr 97

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.5. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

Updated
01 Apr 97

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or
the program is capable of generating random character groups. As
it stands you must invoke the program from a Linux Virtual
Console, as it relies on certain kernel calls to produce the
sound, and these don't work as easily from an XTerm. As it
sounds each character it lists the character in verbal form (Di,
Dit, Dah etc.) to the screen. Alan is hoping that someone will
take the code and enhance it with the features he has listed in
the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.z>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.6. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.
Status
Quite stable

Updated
01 Apr 97

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse.tar.gz can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.
Updated
01 Apr 97

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either www.bobsplace.com <http://www.bobsplace.com/~twitham/> or sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

Updated
01 Apr 97

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope in the scope package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.3. Printed Circuit Board design tool.

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

Updated
01 Apr 97

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current> or from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation tool suite.

Status
vers 5.10, stable.

Updated
01 Apr 97

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet. It is a suite of tools for circuit design and simulation.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

Updated
01 Apr 97

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain the irsim package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

Updated
01 Apr 97

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of the spice package from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely
redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

Updated
01 Apr 97

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the svgafft package at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

Updated
01 Apr 97

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio, performs a fast fourier transform on the data and displays the output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/> or by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development and implementation of Digital Signal Processing. It allows you to design your DSP network, runs simulations with oscilloscope style plots and listings at any point in the network.

Status
Alpha version 0.2.

Updated
01 Apr 97

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of total memory (real+swap) recommended, 6Mb of disk space for minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is a binary only package for Linux which I recommend you start with. There is comprehensive documentation included from which you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi <ftp://ftp.funet.fi/pub/Linux/util/electronics/opd>. There are a number of files that comprise the package, some of the quite large so be prepared.

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

11.10. bpf - bandpass filter calculator

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
bpf assists in the design of two pole bandpass filters.

Status
Stable.
Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
bpf is a simple text interface program that offers you a menu of

options of different ways of inputting design data. After you've entered the data it presents a text based circuit diagram and a list of the appropriate component values. It sounds simple, and it is, but it's also quite cute, and bound to be useful.

Where and How to obtain it.
You can obtain bpf.tar.Z from www.atd.ucar.edu <http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse Code tutorials, technical examination database, Computer Based Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. twclock - World Time Clock for Hams

Author
Ted Williams, ted@bluestone.com

Description
A world clock designed for ham radio operators

Status
Version 1.0, stable.

Updated
01 Apr 97

System requirements
Motif libraries if you want to recompile it. Just X11 if you want to run the precompiled binaries.

Detail
Anyone who needs the time of day someplace else in the world, or anyone tired of the same old look of their clock will find this software of interest. It is implemented with Motif widgets, and will displays the current time in major cities around the world.

Where and How to obtain it.
You can obtain the twclock package from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright
GNU GPL

13.2. Chirp - Contest Logger

Author
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

Description
Contest logging program

Status
Active development

Updated
01 Apr 97

System requirements
Requires ncurses library and header files to compile.

Detail
A linux based contest logging program. Kenneth is writing it so
he can use it on his laptop while working VHF contests. He is
also writing it as an excuse to learn ncurses programming. His
goal is a general purpose contest logger that a user can specify
new contests in as they come about. It supports all bands and
modes.

Where and How to obtain it.
When version 1.0 is available, you should be able to find it
from the Chirp Home Page
<http://www.cs.utexas.edu/users/kharker/chirp/>

Licensing/Copyright
Probably GNU GPL.

Contributed by
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

13.3. Contest - Contest Logging Program

Author
Carsten Wilderotter, carsten.wilderotter@student.uni-ulm.de

Description
A logfile program for Contest operation

Status
Version 0.0.1, Alpha

Updated
01 Apr 97

System requirements
No special requirements.

Detail
Linux contest logging program.

Where and How to obtain it.

13.4. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for Amateur Radio operators.

Status
Not yet available.

Updated
01 Apr 97

System requirements.
Linux compatible hardware, some software will obviously require specialised hardware to operate. No additional software should be required.

Detail
A complete Linux distribution specifically catering for Amateur Radio operators. It will include a fully featured Linux installationplus a range of amateur radio specific software such as those listed in this document. Bruce has detail and updated status report available at the LinuxForHams WWW page <http://www.rahul.net/perens/LinuxForHams>. Bruce has been extremely busy with the Debian project and this has reduced his available time to just about zero. He does still intend to pursue this. Why don't you help out by maintaining one of the software packages as Debian packages ? More information from the Debian Web Site <http://www.debian.org/>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.5. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are

exposed by sunlight and what parts aren't.

Status
Released.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.6. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture

of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like mercator projection. You have a number of options in determining the behaviour of the view. The details are available from the xearth Home Page <ttp://www.cs.colorado.edu/~tuna/xearth/index.html> and in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu <ftp://cag.lcs.mit.edu/pub/tuna> or just about any X11/contrib directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is

what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would
be great. If it is commercial software then the name of the
company distributing the software, and an address or telephone
number. If it is available only by some other means, say mail
order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain?
Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what
you do know and I'll list what I can. I'd rather have an incomplete
listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telstra.com.au

I'd list a packet radio address too but I'm still not properly
operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and
Linux take place. They take place in the comp.os.linux.* newsgroups,
they also take place on the linux-hams list on vger.rutgers.edu.
Other places where they are held include the tcp-group mailing list at
ucsd.edu (the home of amateur radio tcp/ip discussions).
To join the Linux linux-hams mail list, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

The HAM-HOWTO, an introduction to Amateur Radio software available for Linux and information on how to configure some of it. Copyright (c) 1995,1996 Terry Dawson.

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

In <33C044AD.57F7@novia.net> "Paul w. Schleck K3FU" <elmers-request@novia.net> writes:

>http://www.novia.net/~pschleck/

Hmm, looks like someone is forging posts in my name. Some errors of note:

- I never put <elmers-request@novia.net> in my From header, only the Reply-To header, and only for the Elmers Directory.

- I would never multiply post both within a single newsgroup, and among many newsgroups. I usually prefer a clean, efficient simultaneous cross-post with followups directed appropriately.

- I always capitalize my middle initial.

What next, a Burt Fisheresque posting where my forger puts words in my mouth claiming that I am one of the following?:

- 300 pounds
- homosexual
- a failure professionally

(I can assure the net that I am none of these things.)

Seems to me that there is nothing more cowardly than a critic who does not have the guts to face his target and identify him or herself by name.

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

Table of Contents

* Elmers List Formatting Standards
* A Brief Historical Overview
* What is an Elmer?
* What is an Elmer Today?
* How do I become an Internet Elmer?
* How may I obtain the latest copy of the Elmers List?
* Acknowledgements

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I

politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of _"Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*],"_ and _"Amateur Radio Elmers Resource Directory [*-Z]"_ (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

John Ackermann AG9V

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 baud one now.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the

networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

David Andrews ZL2SX

andrews@clear.net.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO UNIX, Win95 networking information available.

ampr.org IP Coordinator for California - Los Angeles County (44.016.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

425 DX NEWS Weekly Bulletin WWW PAGE (NEW SITE!!!)

- ------->> http://www-dx.deis.unibo.it/htdx/ <<---------

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in love with RS sats and DOVE telemetry. I'm the Shortwave Listening (SWL) coordinator of the Italian Amateur Radio Association and I have a regular SWL page in their official magazine Radio Rivista. Recently I joined the 425 gang that produces the 425 DX News bulletin. I translate it into English and send it to many DXers via E-mail. I also maintain a WWW page to provide the bulletins graphically with previous numbers and more to come. I've been an SWL since 1974 when I received a receiver as gift from my parents. Now I'm 36 and I'm running also a free BBS devoted to HAM/SWL.

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are _*essential*_ to its ongoing success, so please drop by and say hello!

QEX Editor

Digital Signal Processing (DSP)

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie, FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also Jack Hill and John Seney for FAQ maintenance opportunities and the rec.radio.amateur.* Working Group mailing list). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol.

I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

http://www.novia.net/~pschleck/wireless.html

Maintainer of rec.radio.amateur.misc FAQ

(Formerly maintained by Diana Syriac, KC1SP, and Ian Kluft, KO6YQ.)

Available from:

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

Send me an E-mail message with the words "HAM FAQ" on the subject line
(or packet with your E-mail address) if you want the FAQ text file
sent to you as an attached 120 KB file.

Send me a formatted disk with SASE disk mailer if you want the FAQ
text file sent to you on disk. PC or Mac formats are fine.

(The majority of the original content of the FAQ remains the same, but
now it's a hypertext document with hundreds of links to radio-related
sites and is a significant resource to all students of amateur radio -
regardless of their license status.)

Maintainer of Digital Storage Scope FAQ

Available from:

http://www.mv.com/ipusers/wd1v/dsofaq.html

or write me at my E-mail address above with:

My vocation and avocation both deal with Radio Frequency transmission and propagation. I have spent considerable time working with RF safety issues as they pertain to broadcast radio, television, and now amateur stations.

Presently I serve as Region 3 Administrative Assistant for Air Force MARS.

Additionally, I serve as Activities Director and Chairman of the Field Day Committee for the Viking Amateur Radio Society (VARS).

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and
sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with
hobby terms and expressions. A clear speaking voice and the ability to
read the written text of Amateur Radio books and describe the diagrams
and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new
volunteers, as well as a copy of the book to be read and cassette
master tapes. Readers will need a good-quality cassette tape recorder
and a quiet place to record. Some of the books we would ask readers to
tape would be ARRL license manuals, special interest Amateur Radio
books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace,
as long as there is a quiet place to read. It is a wonderful way to
share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came along. I also do my own monthly newsletter called the _Hamband DX'er_ for many years. It is still going. I take care of the ARRL SWL Bureau. My name is listed in any callbook under the various QSL bureaus. I am an avid DX'er of the ham bands with over three hundred countries confirmed. Presently I run my own WWW Page to help others with QSL info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

Our club offers CW training opportunities and we are working on
starting some theory classes but there are plenty of active Elmers in
our group despite our lack of organization to date. We also have VE
sessions and would be glad to help anyone in the area who is
interested in amateur radio.

I am especially interested in VHF/UHF and microwave amateur bands as well as Amateur television. I am treasurer and a founding member of the newly-formed Triangle Amateur Television Association in Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Carcia's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a

particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Carcia's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's certified by WCARS VEC. I have served for several years as a proofreader for the NCVEC Question Pool Committee. I work closely with the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic handling from almost day one, having earned my first BPL at age 16 as a novice. I have served as Assistant EC, County EC and currently serve as District Emergency Coordinator for ARES/RACES District Radio Officer for Emergency Management Area F of North Carolina. I also coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as an officer of the local club, the Western Carolina Amateur Radio Society. I designed our homepage, am quartermaster of club equipment, and carry the keys to the club repeater. I frequently teach both theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI committee, hold WAS Awards both as a Novice CW operator and SSB Extra Class, a DXCC with 86 of them worked as a Novice. I am also the National Board Chairman of the Geratol Net, a WAS net which meets nightly from October thru April. I also am chairman of the local club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF antennas and am frequently a new licensees first contact. (A debt I am repaying to my three trusty Elmers of so many years ago, two of whom are now silent keys)

I would be willing to help in these general areas on-line or close-by on the phone or in person. (I am a college professor by trade)

Jack G.F. Hill W4KH

Mobile Antenna Systems and Installation (Primarily HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* rra-wg@theporch.com
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs,

Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://www.qualcomm.com/people/pkarn/papers/mysscomments.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

April Moell WA6OPS

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

I am an NTS operator running an unattended digital (Express, Winlink equivalent) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

The Netherlands CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emeregency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Cordinator from 1977-1993.

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

* Portable
* QRP
* VHF
* Volunteer Examiner (W5YI)

I suspect that I would be classified as a "classic" amateur operator. While not a proficient homebrewer/RF designer (yet), I pride myself on the ability to construct equipment from kits, as well as being able to competently debug and fix the equipment I use - this is a set of skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

- --- 2393,2437 ----
here at HQ. I can usually get back to you within a few days to offer
some additional help.

! Many EMI/RFI files are also available from the ARRL Info Server. See
! Mary Carcia's entry for more information.
!
! ARRL Technical Information Service Coordinator (tis@arrl.org)
!
! The ARRL Technical Information Service (TIS) is a valuable membership
! benefit that helps hams find answers to difficult technical questions.
!
! The answer to a ham's most common technical questions can be found in
! one of the many books about Amateur Radio. Folks who call or write to
! ARRL TIS staff are often referred to one of these books or to a past
! magazine article.
!
! However, most hams find that the fastest way to get the answer is to
! do their own research. Publication catalogs often talk about what

! kinds of information are available in different books. A few good
! books will answer the vast majority of questions as well as enhance a
! ham's knowledge and enjoyment of this fascinating hobby.
!
! Magazines are also a superb technical reference. An annual index of
! articles appears in the December issue of QST and other magazines.
! These indexes will usually have an article or two (or six) about a
! particular topic. If an older QST or QEX article is not available
! locally, the ARRL Technical Department Secretary can provide a copy
! for a small fee. Back issues are also available from the QST
! Circulation Department.
!
! The ARRL Technical Information Service is a valuable source of
! information and research for questions that cannot be answered by
! other means. ARRL TIS has information packages and bibliographies that
! are available on request to answer most technical questions.
!
! For those who want to know if something has been previously published
! on a particular subject, TIS can also assist with research to locate
! this information. TIS also helps locate companies that sell hard to
! find parts or supplies used in our hobby.
!
! Many TIS files are also available via the ARRL Info Server. See Mary
! Carcia's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web
Home Page.

! I've been licensed over 25 years. I was one of the first VE's
! certified by WCARS VEC. I have served for several years as a
! proofreader for the NCVEC Question Pool Committee. I work closely with
! the WCARS Directors, and am an active VE with that organization
!
! I have been involved with Emergency Communications and Traffic
! handling from almost day one, having earned my first BPL at age 16 as
! a novice. I have served as Assistant EC, County EC and currently serve
! as District Emergency Coordinator for ARES/RACES District Radio
! Officer for Emergency Management Area F of North Carolina. I also
! coordinate SKYWARN activities in our area.
!
! I have served as Hamfest chairman, assistant chair, etc., as well as
! an officer of the local club, the Western Carolina Amateur Radio
! Society. I designed our homepage, am quartermaster of club equipment,
! and carry the keys to the club repeater. I frequently teach both
! theory and code for local Novice/Tech classes.
!
! I have been Field Day Chairman for five years, serve on the RFI
! committee, hold WAS Awards both as a Novice CW operator and SSB Extra

! Class, a DXCC with 86 of them worked as a Novice. I am also the
! National Board Chairman of the Geratol Net, a WAS net which meets
! nightly from October thru April. I also am chairman of the local
! club's packet committee.
!
! I "dabble" in helping newcomers make dipoles and other simple HF
! antennas and am frequently a new licensees first contact. (A debt I am
! repaying to my three trusty Elmers of so many years ago, two of whom
! are now silent keys)
!
! I would be willing to help in these general areas on-line or close-by
! on the phone or in person. (I am a college professor by trade)

! ARRL Technical Information Service Coordinator (tis@arrl.org)
!
! ARRL E-Mail Information Server SysOp (info@arrl.org)
!
! The ARRL Technical Information Service (TIS) is a valuable membership
! benefit that helps hams find answers to difficult technical questions.
!
! The answer to a ham's most common technical questions can be found in
! one of the many books about Amateur Radio. Folks who call or write to
! ARRL TIS staff are often referred to one of these books or to a past
! magazine article.
!
! However, most hams find that the fastest way to get the answer is to
! do their own research. Publication catalogs often talk about what
! kinds of information are available in different books. A few good
```

! books will answer the vast majority of questions as well as enhance a
! ham's knowledge and enjoyment of this fascinating hobby.
!
! Magazines are also a superb technical reference. An annual index of
! articles appears in the December issue of QST and other magazines.
! These indexes will usually have an article or two (or six) about a
! particular topic. If an older QST or QEX article is not available
! locally, the ARRL Technical Department Secretary can provide a copy
! for a small fee. Back issues are also available from the QST
! Circulation Department.
!
! The ARRL Technical Information Service is a valuable source of
! information and research for questions that cannot be answered by
! other means. ARRL TIS has information packages and bibliographies that
! are available on request to answer most technical questions.
!
! For those who want to know if something has been previously published
! on a particular subject, TIS can also assist with research to locate
! this information. TIS also helps locate companies that sell hard to
! find parts or supplies used in our hobby.

! Many amateur radio informational documents are also available from the
! ARRL E-Mail Information Server (or Info-Server for short). To find out
! how to use the Info-Server, send E-mail to info@arrl.org with any
! subject (it is ignored) and the following text in the body of the
! message:

! HELP
! QUIT

See Jon Bloom's entry for information about the ARRL World-Wide Web
Home Page.

Message-ID: <19970707081301.EAA29088@ladder01.news.aol.com>
Source record: 194070

Internet Threats - Beware
James O'Brien <kd4cdb@bellsouth.net> Wrote:
>Allright another moron who knows how to use qrz! I see that your
>trying to grow a set of balls now and that's admirable. You still
>don't have a name or a callsign. Try to find the jpg that goes
>with my call,because if your balls grow big enough and you
>are tough enough to knock on that door and repeat the crap
>you've spewed on this group to my face,that's who will beat
>the living hell out of you. As far as civility goes, if you
>don't like it put a hinge on it and swing it up your
>no-name,no-call anon ass.

Now - for those of you who have questioned why I use a screen name instead of a real name - the above is the definitive answer. Thank you, Mr. O'Brien, for so perfectly illustrating why it is extremely advisable to use a screen name on the internet. I really don't want to get to know someone like Obrien "up close and personal."

What this moron does'nt say is that he threatened me FIRST. Under
Georgia and Federal law if you are threatened you can inform the jerk
that you will defend your property. And since I don't post anon like
this gutless wonder,I'll repeat it again. If you come to my property and
threaten me face to face like you have in my box and on this newsgroup
then I will do what I have to do,including beating the hell out of you.
Now,I have forwarded your original threat to my isp. Now if you would
like to go furthur anon Jerk,send me another threat. Then I will get a
warrant for your arrest. Need any fills anon jerk?

How many times do I have to read messages from hams that send a
"Thank You" addressed to ALL. When one seeks help and
someone takes the time to respond, the least the receiver of
help can do is send a simple individual reply for thanks. After
all-the respondents to this call for help responded one by one.
I have received up to 75 messages in a call for help and sent
individual thanks to each. It was very time consuming, but it
was the right thing to do.

Would you at your wedding, if you were the groom, get up at the
end of the reception and yell out, "Gee, Thanks everyone for the

gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to
respond to someone who H E L P E D you.

Access to an HF radio, or shortwave radio, is a great way to practice
getting your code speed up to snuff by monitoring CW transmissions and
copying the text.

Also, I really don't think you can count out the issue of biology and the ideas of Darwinism. I've been reading a lot about the application of evolution in psychological matters as of late and it makes sense. Whether it's true, who knows, but there are many valid points...

Take a read of The Moral Animal: Why We Are the Way We Are : The New Science of Evolutionary Psychology by Robert Wright. It's a great book, very thought provoking whatever you current position is.

(Continued from previous message)

INTERFERENCE TO ATC

The FCC has been called in to investigate unintentional interference to aviation communications in the mid-west. Some of the interfering signals appear to be coming from ham radio operators.

Radio interference has been interrupting communications with aircraft over western Kansas. The Kansas City Air Traffic Control Center says that the safety of passenger planes and other aircraft has not yet been at risk.

The interference has been traced to paging equipment and commercial and private radio transmitters in three states by the has been severe enough to force re-routing of planes around the affected areas.

Specially equipped aircraft helped to trace the interference to pager towers, a radio station transmitter and privately owned transmitters in Junction City Kansas, a city in Oklahoma and Lubbock and Amarillo Texas. The interference varied from Morse code to squealing or static to conversations from cellular phones, regular telephones and ham radio operators.

Randy Downing, Airways Facilities Manager at the Air Traffic Control Center told the Associated Press and other media outlets that the problem has not yet been completely erased. The FCC has shut down some of the interfering transmitters, but the search is still on for other transmitters that are still causing problems.

If you live in the affected area you might consider getting your club to borrow or rent a spectrum analyzer and hold a radio tune-up day party. This to make certain that your transmitter and those of your friends are squeaky clean.

(Via W0QA)

(*****

WEATHER EMERGENCIES

From the northern United States to deep in the heart of Texas, amateur radio operators stay busy, providing emergency communications. Radio amateurs in three states are being activated because of severe weather.

South central Texas has been inundated with rain, so much of it that the town of Regan Wells was cut off by high flood waters. Lee Besing, N5NTG says transportation and telephone service to the area were knocked out. That left amateur radio as a lifeline for the American Red Cross to use in

providing disaster relief services.

Bexar county REACT volunteers provided communications support. That's where a linked amateur radio network called the Armadillo Inter Tie system came in handy. When owners of the system were told about the emergency, they immediately offered the network for emergency communications as long as needed. Using the 440 MHZ band, radio amateurs provided communications back to San Antonio.

For Wisconsin radio amateurs, endurance is the big challenge. When a severe thunderstorm watch was issued just before 2 a.m. June 21st, it was the beginning of 8 inches of rain, prompting a nearly 10 hour ordeal.

Skip Voros, WD9HAS, is the areas severe weather communications coordinator. He says record flooding hit Milwaukee's northside, prompting a net on the Milwaukee Repeater Clubs wide area coverage 146.91 repeater.

Club members, supporters and area hams relayed information on flooding, blocked streets, water depths and rainfall reports along with other severe weather problems. Nearly 20,000 residents had no power. Despite its record length, Voros says the net ran smoothly, thanks to cooperation, coordination and courtesy.

In another part of Wisconsin, it isn't rain, but heat that's prompting a need for amateur radio support. A shortage of electrical power caused by hot weather has prompted Madison Gas and Electric Company to call for power conservation measures. All this at the same time that several power enerating stations are off-line for maintenance. The power company says electricity must be conserved to prevent rolling blackouts in parts of the state. Jim Romelfanger, K9ZZ, says the alert has also affected amateur radio operators in the Madison area. They will be on stand-by, ready to provide emergency or back-up communications in case power is lost to certain agencies.

In this age of cellular telephones and other high tech communications, you may wonder why amateur radio services are still requested. Experience during recent disaster emergencies suggests that the newer communications technologies don't always provide all the needed services. Sometimes the new systems don't cover the areas affected, or become overloaded. But what makes ham radio perhaps most valuable is the people, nothing seems to beat

GMRS

The Federal Communications Commission has assigned Rule Making Number RM 9107 to a petition filed late last year by Ken Collier, KO6UX to bring back organizational licenses to the General Mobile Radio Service or GMRS. The petition would allow charitable organizations, those with 501(c)3 tax exempt status, to apply for new General Mobile Radio Service licenses or make their existing grand-fathered licenses once again active. Collier says that if the rule making succeeds it would mean that REACT teams, Red Cross chapters, SATERN groups, and other organizations interested in public service communications would be able to acquire licenses that cover everyone in the organization. For more information on RM 9701 contact Ken by e-mail to ko6ux@netsol.com.

(Via KO6UX)

(*****

ARRL TO FCC: KILL ANTI-THEFT SYSTEM PETITION

The ARRL says there is no justification for the FCC to consider increasing power limits or expanding the frequency range of Part 15 anti-theft systems that operate on the high frequency bands. Commenting in response to a Petition for Rulemaking from Checkpoint Systems Inc., a manufacturer of the theft-deterrent devices, the League said the proposal was "technically baseless" and "fails to account for the extremely high interference potential" to licensed services. Under FCC rules, Part 15 devices must comply with specified radiation and emission limits and protect licensed services from harmful interference.

(Via ARRL)

(*****

VANITY CALL SIGN GATE 3 OPENS AUG 6

Vanity call sign gate 3 will open on August the 6th. This, according to the FCC which says that Advanced class hams will be able to apply for a callsign appropriate to their license class on or after that date. Applicants must file either on a paper FCC Form 610V or electronically via

the FCC's Web site. Either way, there will be a $30 fee.

The August 6 deadline squeaks under the implementation of the FCC's new fiscal year 1997 fee schedule, adopted June 16. Under the FY 97 schedule, which becomes effective September 16, 1997, the vanity application fee will jump to $50 a year.

For an in-depth look at what's required, we suggest you take your web browser over to the ARRL website at:

www.arrl.org

and click on W1AW Bulletins. There you will find a two part bulletin giving all the information you need to know to file properly. You can also reach the ARRL website on a direct link from the our website at:

www.arnewsline.org

Again that's August 6th for the opening of gate 3 of the Vanity Call Sign program for Advanced class amateurs. No word yet on when gate 4 will open for everyone else not covered under gates 1 through 3.

(Via FCC Release)

STS-94 LAUNCHED

When the space shuttle Columbia was launched from Cape Canaveral on July st, it was the first time that the same crew of astronauts flew twice! Last April when the Columbia was forced to land prematurely when a fuel cell broke down. So NASA decided to refly the mission as STS-94 and three of the crew of seven astronauts are Amateur Radio operators.

Jim Halsell, the commander is KC5RNI. Mission Specialist Janice Voss is KC5BTK and Don Thomas, another mission specialist, is KC5FVF.

It is a SAREX mission, using voice only on a main downlink frequency of 145.55 MHZ while over the United States. As this is the last SAREX mission of 1997, seventeen schools are scheduled foe contacts, including one in the Peoples Republic of China.

NASA plans STS-94 to be a long duration mission of sixteen days on orbit. This will lead to a landing in Florida slated for the 17th of July.

MIR STATUS

While SAREX continues to cruise comfortably in orbit, Astronaut Mike Foale, KB5UAC aboard the Mir Space Station sends this message to all hams. Thanks for all your good wishes.

Shortly after an accident that crippled the Mir Mike managed to get on the air. Using ham radio to supplement his normal NASA and Russian communications channels. He talked to fellow astronauts, NASA managers and his family through the Johnson Space Center Amateur Radio Club in Houston.

At that time it was assumed he would not be able to make general QSO's using the Mir ham station because electrical power was in short supply. But Mike has been on the air ever since. Using packet and voice to share his experience with other amateurs all over the world.

He told Dave Larson, N6CO that he simply tapped the power from the main supply and nobody voiced any objections.

He said, It looks like we are back in business, less one module.

Foale and his team mates, two cosmonauts have stabilized their spacecraft and they are waiting for a supply ship to arrive next week. Bringing supply cables and a specially devised plate to fit over the hatch of the Specter Science module.

The accident made a hole in that module. It has been sealed off and depressurized ever since. This crew will try to make cable connections to get the station up to full power.

Another crew will fly up in August to seal the leak to put the Specter module back on-line.

Mike and the cosmonauts also are working on their new but faulty oxygen generator and to get it back on-line. They are using incendiary candles to supply oxygen temporarily.

The cosmonauts also began practicing their repair work. But they and Foale have still have a lot of time on their hands. And much of that is spent in darkness to conserve electricity. So Mike is on the air a lot.

Miles Mann, WF1F says Mike told him the crew spends much of its time looking out the window, at the universe around them.

An American ham radio operator is operating an amateur radio station provided by the German SAFEX organization controlled by the Russian MAREX

group communicating through the SAREX and MIREX working groups here in the United States. To provide a link for health and welfare traffic. It really is a remarkable demonstration of what can be done by the nine nation group now planning for ham radio aboard the International Space Station in a couple of years.

Matt Bordelom, the SAREX principle investigator and his team are handling the contacts in Houston. He reports that Mike and his team mates in orbit are in good health and good spirits.

Frank Colbertson, the NASA / Mir mission chief says that if the repairs are successful, American Astronauts will continue flying in Mir while the space sation is assembled in orbit. The mood in Houston remains optimistic.

Mir, however, still is a space station in trouble. Mike Foale is roviding amateur radio an intimate view of the danger and the drama as the crew fights to save it.

We asked Mike when and where the amateur fraternity can look for KB5UAC. He plans to operate frequently when ever NASA and Moscow are not using their main channels of communication. Look for him on 145.800 MHz operating split. Occasional over the United States. You also may find on 145.985 simplex.

AMSAT and SAREX bulletin boards provide information on when and where to listen.

More on this aspect of ham radio and Mir in future Newsline reports.

(Via Newsline)

MIR COMMUNICATIONS

Another United States ground tracking station has been upgraded and is on-line to assist in Mir to Earth communications. According to Astronaut and ham radio operator Ron Parise, WA4SIR, the antenna system at Wallops has been changed to a quad yagi. Also the RF system has been upgraded as well. According to Parise' posting on the AMSAT BBS, look for additional Mir support through White Sands beginning this month while an update on the gear at the Dryden Spaceflight Center at Edwards Air Force Base in California goes toward completion.

A NEW ARRL VHF NEWS PROGRAM

Look for the possibility of yet another VHF oriented ham radio voice news bulletin service to premiere later this year. This one sponsored by the American Radio Relay League.

The ARRL has sent a survey to a random sampling of affiliated clubs who operate repeaters or local nets, and to Bulletin Managers and Official Bulletin Stations. This to ask their help in deciding the best way to offer an expanded on-air news service that the League provides.

The survey itself appears to be a staff response resulting from Board action taken at an ARRL Executive Committee meeting in St. Louis, Missouri earlier this year. There, the Directors gave marching orders to the staff to complete plans for what can probably be best described as a Newsline like service. They were told to have a report ready for consideration for the Board of Directors when they meet this summer.

It's believed that a majority of the Leagues' Directors favor the creation of a VHF oriented voice service. This, in the hope of reaching the ears and minds of the many codefree Technician class hams who do not bother to listen to ARRL high frequency bulletins or read current League news and information.

Many if not most no-code Techs live on one repeater and do not even know that a United States national ham radio society even exists. The ARRL leadership appears to see a voice news service as one way of reaching this large yet isolated group and possibly getting some of them to join in and become more involved in the ham radio community. Such a service would probably not replace the voice bulletins now aired on high frequency bands by the League's W1AW service. Rather, most observers feel it would be operated as an adjunct to it.

So, if you hear from anyone who has received a survey form, please encourage that person to respond to it promptly. Or, if you have any thoughts on the matter yourself, you might want to drop your Director a note to let him or her know your ideas. This will give the ARRL leadership the best information from which to base a decision when the Board meets in a few weeks.

If the ARRL does decide to become a telephone or satellite delivered voice news provider it will be competing with almost a dozen other international, national and regional services already in operation for hams

to choose from. In addition to Newsline on the phone lines and the web there is "The RAIN Dial Up" in Chicago, "Amateur News Weekly" out of Cincinnati, and "Eastlink" from Philadelphia. Meantime the satellites deliver the weekly "Houston AMSAT Net" and "This Week in Amateur Radio" rom Albany, New York. This, to mention only a few.

(Via Newsline and several local ARRL Section notices)

NEWSLINE/TAPR CELEBRATE REALAUDIO PAGE

And speaking about ham radio news, word from Greg Jones, WD5IVD over at Tucson Amateur Packet Radio that within the next two or three weeks their website that hosts the Newsline RealAudio service will exceed the number of accesses that it had in all of 1996. The counter shows that in 1996 the page was accessed by 23,000 people. And while it is half way through 1997, already over 22,000 have been in to listen so far.

Now, its true that any one person can and probably does access the page more than once a year, but neither TAPR or Newsline are complaining. It shows that both their service and ours of have a growing audience. If trends continue as they are, the Newsline RealAudio page hosted by TAPR will probably be able to boast close to 50,000 hits by years end.

To find the TAPR site go to:

www.tapr.org

or to our home page at:

www.arnewsline.org

and click on the Realaudio link to TAPR.

= = = = =

Bob,

Hopefully, you will also get responses from some of the other key collectors
who are more knowledgeable than I am on specific variants. Your key sounds
like a typical "flameproof" / "Navy" key. I have a couple of those in
my collection, although at the moment it is boxed up so I am unable to
check that number. The flameproof come from the contacts not showing,
and the Navy (guess) from the fact that there is a base under the knob.

The other point towards the Navy is the "Contractor Code", which I learned
in the July 1993 issue of the Vail Correspondent was adopted in 1916. The
later codes (ca. WW-II, etc) have the CCC-######-C pattern, with the center
figure often in the 26000 range. CJB is "Contract" Jesse Bunnell, a good
name in the telegraph key business. 26008-A is the more specific model
and variations. //I'm wondering if this is "26003-A" with a blurred or
misread "3" vs. "8" .....

There are a number of excellent WEB sites that you can find through the
various search engines, plus they point to each other. Many have
photos.

Try http://fhonix.metronet.com/~nmcewen/ref.html

for a starter, he has links to others. Regards, Dave K7HMP

Actually, the ARRL VE manual states that you must participate in at least one session during the 12 month period prior to the expiration of your accrediation. Since the accrediation period is 3 years, that would be a minimum of 1 session per 3 years.

SHORTWAVE NEWS

More problems for shortwave broadcasters as satellite transmissions and internet audio vie for its audience. Italy's Radioicontro newsletter says Radio Australia could be the latest to fall victim to the latest technology. The shortwave newsletter says that the continued presence of Radio Australia on shortwave is very much in doubt, but the service has support.

Late word is that someone in Australia's Ministry of Communications has stated that everything to save the external service of Radio Australia must be done because of its unique and significant presence in that region of the Pacific. At air time the Ministry is reportedly considering the possibility of continued reduced power transmissions by the service.

(Via Radioincontro)

(*****

BIKE RIDER HAMS

Hams across Canada are being asked to help track of a bicyclist. Dr. Andries Botha left Vancouver on June 21st in hope of completing a 4,300 mile ride in 20 days. That's an average of 217 miles every day.

Roy Nystrom, VE6ATN, has asked the Amateur Radio community to help track Botha as he travels his route. Those spotting Botha should message Nystrom on 7.055 MHZ or via e-mail to:

rnystrom@telusplanet.net

A precise itinerary is not known but Dr. Botha should be wearing a black jacket that reads "Coast to Coast in 20 Days.

(Via RAC, ARRL)

DX

In DX, the group of N4GN, OH1NX and OH2BH will arrive on the Aland Islands on Monday, July 7th and plan to put two stations on the air. The operation will be carried out from the famous OH0W site with stacked beam antennas and a clear horizon over the open sea in all directions. Two Yaesu FT1000MP stations with Alpha 91B amplifiers will be used. QSL via:

Tim Totten, N4GN
8309 Dawson Hill Road
Louisville, KY
40299-5317

And the long awaited CY9AA operation came to life on June 27th at 03:00 UTC. The prediction of good weather was premature. The landing was made in gale force winds and drenching rain. It was every bit as difficult as expected and it took over 9 hours to get a vertical and dipole up and get on the air. The operators are wet and bruised, but there were no major incidents. When they came on the air they were active on 40 CW and 20 SSB with good signals into the West Coast of the U.S.

And be sure to mark your calendars for July the 12 and 13th for the Internet 6 Meter DX Contest. Take your web browser to:

www.uksmg.org/awards

for information and contest rules.

(Via various DX newsletters)

EINSTEINS CAT

This from our legend has it file. In this case legend has it that when asked to describe how radio works, Albert Einstein put it this way:

"You see, wire telegraph is a kind of a very, very long cat. You pull his tail in New York and his head is meowing in Los Angeles. And radio, said Professor Einstein operates exactly the same way. You send signals from here and they receive them over there. The only difference is that there is no cat."

The Ham Radio & More Show, on air since April, 1991, is NOW
available via RealAudio as well as shortwave; thanks to TAPR.
Current Ham Radio & More Shows will be added to the new TAPR
page within 48 hours of the live broadcasts. And, the shows will
remain on the site, so you can listen weeks later. Also, another TAPR
RealAudio site exists for past programs dealing with digital topics!
So, if you miss the live shortwave broadcast, or are in an area where
it's difficult to hear the broadcasts, check the TAPR site for the Ham
Radio & More Shows. Thank you TAPR and Greg....

Perhaps you don't. Autopatching is third party operation, and requires
that a control operator be at a control point. That can be a remote
control point of course. But an ordinary repeater, even a cross band
repeater, can operate under automatic control, so a control operator
need not be present. A 2m to 10m cross band repeater doesn't need
a control operator present, and a Tech operating on 2m isn't doing
anything outside his privileges by using one.

Looking to buy a used MFJ 9420 20 meter SSB rig. No accessories
needed, but a mike would be nice. Anybody have one for sale?

Please email me soon at n7ln@qsl.net or dvhunt@es.com.

Thanks,
Darvell (N7LN)

You missed the point, which was that operating in the (for example) extra
portion of any band during a contest is not good operating procedure if
you want to contact as many US hams as possible. What you say is true, you
need only be a general class licensee to have access to the full 10m band.
If you operate a Field Day station in the General/Advanced/Extra portion
of the 10m band, then you are limiting yourself to contacts with other
General/Adavanced and Extra operators. If you operate in the Novice/Tech+
portion of the band, then your "pool" of potential contacts is much
greater.

> I still say the entire 10 mtr band should be open to ALL holders of
> ANY class license.You never said whether you agree or not.

You're right, I didn't.

> with which include CLearwater, Milwaukee, and Las Vegas.

You won't get to deal with AES Clearwater anymore. They closed up shop last Thursday with no notice to anyone. They didn't even notify their employees. Their salesmen arrived to be told the store was closed, and to go home.

I've dealt with AES Clearwater over the last few years and have had no problems, though when they were on Drew Street in Clearwater, they never had enough stock and often had to order from Orlando. In the spring of 96 they moved to a much nicer store along US19 and there were a bit slow stocking the shelves but Rick, N9PMR, came down to be manager this spring and did a great job. He helped at our local field day, and even loaned us equiptment including a TS-950SDX, TS-970 and a IC-756 as well as power supplies and antennas.

I shopped at AES Clearwater because it was local. I work 8 blocks east of the former store location and dropped in often and bought small things, from a new rubber duckies, to magazines. I also did my share of bigger ticket items. I bought a HF Rig in March, a dual band mobile in February and just two weeks ago spent $130 in antenna accessories for my new car.

Now I guess I'll be shopping mail order -- and I won't be going to Orlando.

AES just walked out of the Tampa Bay area, therefore I doubt few Tampa Bay area amateurs will be buying much mail order from AES. I was about to walk in and buy a Yaesu VX-1R or a mobile rig for my car. Their loss.

>
> Phayden@dspn.com
>

First, good luck. Now..with that type of $$$$ budgeted, I would
seriously look into a dual band HT. In the used market, I would suggest
the Kenwood TH78A. For about %350, you could pick up one with all the
accessory goodies. However, if new, I am prone to suggest the FT51R by
Yeasu. I know a lot of people who have recently bought one and are
extremely pleased with it. You might check the AES and HRO web sites for
current pricing.

But still, a dual bander might be better as you'll have greater
versatility in accessing repeaters, talking to others, etc.

Make sure you have at least 7' of vertical space before you get a comet
gp6. The ar270b will fit in about 4'. The gp6 has a lot more gain than
the 270b though.

588. Re: CBers on 10 meters?

>unavailability of repair parts, etc.) The band would then be opened to
the
>amateurs for use (depending on class, I guess).

What have you been smoking, Oye Boy? You've come up with some good
fantasies on here before, but this takes the cake!

How can you possibly believe this would be effective? CB linear
amplifiers have been prohibited in the same manners you described above,
yet their availability and proliferation is greater today than ever
before. You used to have to "know somebody" to get an amplifier; now, you
simply go to the nearest truck stop and choose your amp from the entire
Texas Star line that's displayed underneath the counter. No questions
asked.

-Drew in Sunny Central Florida-

Dave Martindale wrote:
>
> Maybe it does to you - but why should it? Are my postings worth more
> if I include my callsign than if I omit it? Why?

They could be worth more if your callsign is well-known. Surnames aren't used much on the air, so your exploits are more likely to be remembered by your callsign and forename. If someone has a good reputation associated with their particular callsign, then it may have an effect on whether people read their postings, or whether they just flick past.

> I'd rather judge an article by what it has to say, than whether the
> author has a particular piece of paper or not.

Me too! There's nothing wrong with including a callsign as an individual identifier. Anyone who chooses to pass over or disbelieve material from certain authors simply because of callsign prefix is handicapping themselves by missing out on much useful information. Anyone who posts views based on generalisations about callsign prefixes casts doubt on their own objectivity, and makes me suspicious of everything else they have to say.

Cheers
David, GM4ZNX

(for the benefit of those who see meaning in callsigns......

G => Great Britain
M => Scotland
4 => Morse test passed, licenced late 60's to early 80's
Z => callsigns letters are issued in sequence in UK, so late 1984.

From this, some people seem to think they are able to deduce my technical and operating abilities, age, weight, nationality, eye colour, political inclination, etc. etc. :-)

Hi James,
I've been waiting for you to share some kind of expertise with the net.
Do you have a specialty in *any* field?

You never answered my question from before: What radio equipment have
you built and are operating on the air? Do you do any building at all?

You mentioned one of your interests as being "new equipment." Does
that mean you're an appliance operator with no building skills?

Are you able to write more than one-line insults?

What are you going to do now that the locals have forced you off
of HF? Go back to repeater jamming as before?

Have the abuse investigators from abuse@bellsouth.net contacted you yet?

Did you finish high school?

Inquiring minds want to know.

73,
Jeff KH2PZ

Not necessarily so:<)An auto-patch puts you into a
NO-LICENSE-REQUIRED service.A remote base,from 2 mtr to 10 mtr FM freq,
takes you to a 'higher-license-required' part of the spectrum!This,in MY
translation of part 97, REQUIRES a control op to be physically present
to CONTROL the rig,much the same as 3rd party traffic...

Dave,
A little more detail would be appropriate.
I am using Super Morse usually called SM401.zip for v. 4.01

For theory questions, I found that the Extra upgrade which
I am working on was the hardest to find. What are you
upgrading to?

start at info@arrl.org with e-mail access, they give you
their ftp directions.

Let us know if you what the Extra Class questions.

> Whats political about volunteering ones time to help others in need.

Oh, our emergency services group is *much* more political than that. To
get our "goody card", you have to do things like attend the training drills,
know a fire axe from a pike pole, and even participate in some mandatory
(*gasp*) annual events. In return, we get to be awakened at 3 AM to go
light a fire scene; at some of the events, we even get cold hot dogs.

You see, we don't go get the "goody cards" for the perquisites. We get
them because we're interested in helping the community. We get to keep
them because we're there when they need us, not just when we feel like
showing up and flashing our shiny badges to see the "good" fires close-up.

Hi all,

My homepage is getting bigger and will continue to do so until
Telenordia tell me I have run out of disk space on the server.
You can find my homepage at:

http://user.tninet.se/~acz732k/

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)
250mW HF bands CW TX
4 watt PS for the above
5 watt CW TX - dead easy to build
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX

3 watt linear 1 - 30 MHz
Phasing method SSB exciter
500 watt linear amplifier
April 1st transmitter

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components
Stereo enhancement for HF CW
CW filters
Self tuning CW filter
Q-multiplier
CW keyer using 'relay logic'

DATA/INFORMATION
QRP frequencies
Measuring micropowers
Making PCBs, several methods
G0TLAs QRP circuit database on packet
Coil winding and 'turns' calculation.

DOWNLOADING
Signal generator program
All my QRP@WW circuits in a ZIP file
PCB foil for BUG TX (later version)
'Adult' screen saver

BREWING BOOZE
Brewing beer, wine and 'mash'
Distilling the mash (3 methods)
Making liquours

---------- and more ----------

I will be adding more to the homepage constantly, as long as
I have the time available to do it.

Have fun with QRP (and QRO) de Harry, SM0VPO, Upplands V&#65533;sby.

Message-ID: <19970707.144708.15502.2.HansBrakob@juno.com>
Source record: 194136

Bob Wex w2ilp said:

> My advice to change this poor ARRL policy (Ed Hare please take
> note) would be to build an antenna range at Newington and set up
> practical standards for ham band antenna gain and directivity
> measurements from which relative gain differences could be measured.

Perhaps someone will generously donate the extensive real estate
needed, and fund an annuity to pay for the equipment and personnel
which will be needed on a continuing basis to do a comprehensive
job of this.

Perhaps the manufacturers of antennas, as a group, could fund such
an effort? Naw, then the shortcomings of things like multiband
dipole antennas would be shown in glaring clarity, and they could
no longer be foisted off on naive newcomers.

I recall seeing a reference to a method for "repairing" 3-500's that had developed a violet discharge, but had not actually gone soft. It involved keeping the filament lit for a long period and (I think) gradually increasing the plate voltage.

Has anyone had any experience with this. Or any comments on the liklihood that it would work?

Marty, K1FHR

For the very latest on the Mars Pathfinder/Sojourner mission, visit the DHC Pathfinder Web Site at http://dhcom.com/astronomy/pathfinder.htm. This web site is updated with the latest images, news, and information regarding this historic mission!

This web site will continue to be maintained for several weeks to come, or until the Sojourner stops transmitting data. We will keep the page posted on our servers, however. We are also already designing a web site for the upcoming Mars Global Surveyor mission, and will post the url when it becomes available.

We want to thank those of you who have already visited. We pulled in over 15,000 hits over the weekend! Let us know what you think of the site! We would love to hear your comments or suggestions at dhcom@dhcom.com.

611. Mars weather

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-08 00:00:00 UTC
From: burt1@rocketmail.com
Message-ID: <868357051.25304@dejanews.com>
Source record: 193996
Cross-posted to: ne.weather,rec.radio.amateur.policy,rec.radio.amateur.misc

From JPL(http://www.jpl.nasa.gov/)

Moderate weather yesterday, temperatures hovering around minus 76 degrees Fahrenheit,
pressure about 6.8 millibars, steady light winds blowing from the southeast. Afternoon temperatures
reached about 10 degrees Fahrenheit. The forecast for today: 10 degrees Fahrenheit, cooling
overnight to about minus 105 degrees Fahrenheit.

A little extreme for an Earthly weather report? Perhaps, but with that, scientists on the Mars
Pathfinder mission today presented the first weather report from Ares Vallis, an outflow channel on
the surface of Mars.

2Moderator: Sorry if out of conference.

Hello All,

Your help is heavily requested!!!

Our company named "Multi-Communication". We were established at January 1994. Our business - trade. We have a number of branches in different countries. We employ Russian-speaking staff there. We use office alpha-numeric paging system to organise its work. We would like to buy NEC paging receivers (pagers) from you.
We would like to receive the price on NEC-21A, NEC-26B, NEC-20B and, possibly, other 2-language Cyrillic-Latin alpha-numeric pagers. Please, send us by fax delivery terms and conditions on them, too.
We consider to place an order on
1000 NEC-21A (100-200 monthly - depending on prices),
1000 NEC-20B (100-200 monthly - depending on prices),
1000 NEC-26B (100-200 monthly - depending on prices).
System:
Frequencies: 159,825+MHz and 161,950+MHz,
Rate: 1200 baud,
Format: POCSAG.
Please, call us:
007 095 921-4709,
007 095 971-5514,
007 095 971-5328.
Our fax:
007 095 921-7780.

Our email:
m-comm@dol.ru

If you have no possibility to deliver such volumes directly, please give us the list of distributors with contact numbers.

Best regards,

Dmitri Ivanov

From: Peter Lemken <Plemken@bln.de>
Message-ID: <5ptkdu$q15@usenet79.supernews.com>
Source record: 194000

Hi folks,

I intend to spend my summer holiday somewhere in the Carribbean
sun sometime between the end of Juky/beginning of August for two
weeks.

Who could help me to find an affordable home for this time,
preferrably close to a nice beach resort and hopefully with a
well equipped shack and good antennas.

Since I don't subscribe to any American ham magazine, it is difficult
to find any information from Germany. Can anyone comment on the
ads in QST? Which ones to steer clear of or reccommendations?

Thanks for replying.

So?

I must admit to being baffled at the horrified fascination with
(male) homosexuality on the part of some posters in this group.
Any particular reason you find the notion so intriguing?

Even weirder is the way people actually seem to judge a person's
character based on who they sleep with. Say what?! Did I just
get off on the wrong planet or something?

Do I have to be a homphobic creep to be a ham? Nobody told me!

And what does this have to do with ham radio anyway? Some hams
are straight and some are gay. Just like the population at
large. I respect people who have the courage to live their
life the way that is right for them.

Anybody for some microwaves? DSP? Anything to do with radio,
and not adolescent name-calling?

617. Kenwood TS-850s for Sale !

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-08 00:00:00 UTC
From: 007@141.com
Message-ID: <868380091.10018@dejanews.com>
Source record: 194002

Hi, I have a mint condition Kenwood TS-850s with built in ant. turner, SSB and CW filters, voice read out freq. chip, service and owners manual, mic, box and matching SP-31 speaker for sale. Unit is owned and operated by me, a non-smoker with very little hours of use. It really is in like new condition, hate to sell it but moving and it has to go.
I will pay all shipping costs and insurance anywhere in the USA, $1500.00
Jim, KD6CCP.

No. Rec.radio.amateur is a valid newsgroup. It *has* to exist in order
to have newsgroups below it in the heirarchy, IE the subdirectories
holding rec.radio.amateur.* go in the rec.radio.amateur directory on
the servers. But there is no reason to ever post directly to it, that's
what the topical newsgroups below it in the hierarchy are for. It
is merely a placeholder group in the heirarchy.

>
>It isn't that hard and would take less than 20 years.
>Here's how it COULD be done:
>1. The FCC decides that the 11 meter band should be returned to the
>amateurs.

They could do that, but the political heat they'd take from the millions
of CB users would be intense.

>2. they would debate as to how to do this (about 2-3 years)

Yeah, meanwhile the heat keeps getting turned up on them.

>3. restrict manufacture of new units for sale in the US, with a date by
>which all manufacturing would cease.

Worked real well in stopping CB linear production and sales didn't it?
They could shut down Tandy and a few other big outfits, but most
of the smaller outfits, mostly supplying illegal equipment now, wouldn't
be touched. And of course most amateur HF equipment can easily be
modified to operate the CB frequencies. In fact that's what most of
the freebanders use. So you'd have to stop manufacture of amateur
HF equipment too.

>3. set a specified date by which all retail outlets would have to clear
>their shelves of new stock.

See above.

>4. During the above period of clearing, restrict repair activities on old
>units (by making those parts very hard to get or find)

That would be a neat trick. Repair activity doesn't require a license
anymore, and the parts are industry standard parts used in all sorts
of equipment. Plus there are many millions of units in consumer
hands, and most of them won't fail within the time period. Solid
state gear is very reliable.

>5. notify all retail/repair centers that repairs on old units no longer
>allowable.

That would also be a neat trick since retail and repair operations aren't required to register with the FCC. And repair techs aren't required to hold a license. In other words, the FCC doesn't know who they are, and they don't have a stick to hold over their heads.

>6. at the end of 10 years, close the band to all users.

That only has force for US CBers. CBers in other nations will continue to operate on 11m.

>7. strict enforcement of the new regulations (including prosecution of >those who fail to uphold the notices given by the FCC.

That'd be the neatest trick of all. Since CBers aren't licensed, and don't ID, and certainly won't ID after the band is offiically closed, and since foreign CBers are beyond the FCC's reach, this would be a very hard task. It can't be done by the automated monitoring stations the FCC has. It would require DF teams to actually go out and locate every CB station still operating, and then prepare and bring cases against them in federal court. That would take a very long time with the four monitoring vans still in operation.

>As can be seen by this, most of the band would be cleared in less than 10 >years (except for a few holdouts). within a total of 15 years, 98% of the >11 meter ops would have disappeared by simple attrition (usually by >unavailability of repair parts, etc.) The band would then be opened to the >amateurs for use (depending on class, I guess).

Not a prayer of happening in just 10 years, or even in 20. And where would those millions of displaced CBers go? They wouldn't meekly move to GMRS. They'd just become bootleggers on the HF amateur bands, including the new 11m amateur band. They have a proven track record of ignoring the law, why would you expect that to change?

Sorry Gary, you're just plain wrong on this issue.

On news servers, the DIRECTORY "rec/radio/amateur" must exist in order
for "rec/radio/amateur/misc" (etc.) to exist.

There is no requirement for the news servers to recognize "rec.radio.amateur"
as a valid newsgroup. A review of existing USENET newsgroups will show
numerous examples where this is true.

USENET server software, primarily on UNIX systems, use an "active" file
to define which newsgroups are recognized by the site. The newsgroup
name is "mapped" to a physical directory name, where articles are stored
as individual numbered files based on an incremental value for the
group, as defined in the "active" file. There is absolutely no requirement
for me to define "rec.radio.amateur" in my active file before I can
define "rec.radio.amateur.misc".

Try looking at this web site. I have a complete Logging Software

Package (Log-It v5.0)that you may download for FREE ! Its a fully

functional program with everything the average ham is looking

for. Runs in DOS or WINDOWS. Give it a try.

The website has lots of other neat stuff too ! Like links,

shareware downloads, and more.

Try the CHAT SHACK while you are there. Get some friends together

and keep in touch when the bands are down or anytime !

Take a few moments to complete the SURVEY/QUESTIONAIRE ... we like to

know what is on your mind and how to improve the website/software.

Take a look ! Thanks ... Jim

Sorry forgot the two attatchments. Later Fruits

And it's still for sale to anyone that is not homosexual and has the
cash.

This message is a guide to buying and selling over Usenet. It is intended to
serve as a guide for users unfamiliar with common conventions used in the
Usenet marketplace. Questions and comments may be directed to the author,
Jay Maynard, K5ZC, via Internet electronic mail at

jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 29 June 1994 to add the discussion about how UPS does COD remittals. Thanks go to readers of the personal radio newsgroups, who provided feedback to the net about proper use of this forum, and especially Paul W. Schleck, KD3FU, pschleck@unomaha.edu, who compiled most of the net wisdom and suggested the creation of this article.

Usenet has proven to be a valuable resource for many folks. Along with lots of discussion, argument, and good, solid information, it's also a good place to buy or sell equipment, and many people have done so successfully. As with any other medium, though, there are conventions that make everyone's life easier if they're followed as much as possible.

The following are some suggested guidelines for using the rec.radio.swap forum, based on general net-wisdom from users. Most of it is basic common sense, but it is unfortunate that some users have consistently abused this forum by not following such basic common sense. The general guidelines will serve as well for other groups on the net, such as misc.forsale and just.about.anything.marketplace.

What is appropriate to post in rec.radio.swap?

Any offer to buy or sell radio and electronics equipment, such as transmitters, receivers, antennas, electronics parts, and radio-related computer equipment is appropriate for this forum. Posts concerning non-hardware (but still radio-related) items such as documentation manuals, books, radio-related software, and publications, are also welcome.

Please do not post discussion articles to this group. If you really must post, please do so to the appropriate discussion group. Use email whenever possible, especially if you feel someone has committed a breach of etiquette.

Articles concerning illegal equipment (such as CB linear amplifiers and police radar jammers) are not welcome. Not only will you be severely "flamed", you are also opening yourself (and possibly the owners and administrators of your news site) up to civil and criminal liability. Individuals who are involved in the regular business of buying and selling for profit are requested not to abuse this forum by using it as a "free advertisement" service for their business, although they are welcome to participate as individuals. The distinction here is that there is a cultural bias on Usenet, and an actual prohibition on some networks that carry Usenet traffic, against using the net for commercial purposes. Let your conscience be your guide.

Doesn't this article violate its own guidelines?

Well, yes and no. In the strictest sense, this article violates the rule that only buying and selling advertisements belong in the rec.radio.swap newsgroup. However, since those using this newsgroup are most likely to see articles in the same newsgroup, and since this newsgroup serves readers of the rec.radio.amateur.*, rec.radio.cb, rec.radio.shortwave, and rec.radio.scanner newsgroups, posting it here provides the greatest visibility with the least intrusion. Other suggestions which achieve the same goals are welcome.

If you are looking for something specific...

Try to first find the item through other channels before resorting to the net. If the manufacturer is still in business, you may be pleasantly surprised that they still have the items on the shelf. Other companies specialize in discontinued and surplus parts and equipment and are your best source for tracking down items. Consult the mail-order electronics list, available from ftp.cs.buffalo.edu in file ~/pub/ham-radio/mail_order, or the advertising sections of most popular radio and electronics publications.

Once you have exhausted all other channels, then certainly do post. State clearly what you are looking for (e.g. "a part# 345X56 Bakelite Frobnicator for an American Hawk Fubar 2000, circa 1968-1970"), and how much you are willing to pay (or that you're willing to negotiate). Avoid sending out "equipment-wanted" posts unless you are willing to pay for shipping from wherever it may turn up (this newsgroup is read throughout the world), or state clearly where you're willing to accept items from. Use the Distribution: header line to limit where your posting will go, but be aware that it's far from an absolute restriction; articles with ba (San Francisco Bay area) distribution, for example, are imported to places like Boston, London, and Singapore regularly.

If you are selling equipment...

Be specific in your first post about what you are selling and how much you want for it (or that you're willing to negotiate). State clearly whether or not the price includes shipping, and if it does, be sure to allow yourself a reasonable amount to cover the cost. Avoid sending out "for sale" posts unless you are willing to arrange for shipping to whomever in the message distribution wants to buy it (and remember the comment above about Distribution: headers...); if you cannot limit the posting's distribution for one reason or another, be clear in your message about where you will and will not ship. The US Postal Service has a 50-pound limit on the weight of packages sent through them, and United Parcel Service has a 150-pound limit; other carriers have similar limits. Check with your carrier before shipping. Anything heavier will have to go by motor-freight (read: EXPENSIVE). Don't advertise equipment that you cannot ship within a reasonable amount of time.

Once you have made a deal, state clearly your intentions and follow through on them. Nothing angers a buyer more than delays and excuses. Once you do ship, have it securely packaged (insurance is strongly recommended). Payment terms should be whatever you and the buyer are comfortable with, and commonly include options such as money up-front, COD (Collect on Delivery), or payment upon receipt and inspection. Don't be offended if the buyer wants to take steps to protect his position, since he probably doesn't know you. Most readers of this forum are basically honest and want to maintain their net-image, but the few bad apples should encourage you to only deal with honest, reputable people and to reasonably protect your position in any transaction.

Remember that COD stands for "Collect on Delivery" and not necessarily "Cash on Delivery." The carrier collects the funds from the buyer, and then hands him the package; they then send the payment on to you. They are not a party to

the transaction, and so they don't care if the buyer gives you a bad check. Therefore, you may want to specify the collection of cash, money order, or other certified funds for your COD. Check with your carrier for exact COD options and policies. If you choose this option, make sure the buyer knows up front so that he can make the necessary arrangements. One thing to remember is that UPS, at least will send whatever is Collected on Delivery to the shipper's address as recorded in their files, and NOT to the return address on the package. If you use a commercial packing and shipping service, you'll have to go back there to pick up your payment; if you send from your office, make sure the shipping department knows what to do with the check they'll get from UPS in the mail.

If you are buying equipment...

Respond to an advertisement in a prompt manner. (The item may well not be available if you don't!) Don't skip a message just because you think the price is too high; offer the seller a price you think is reasonable instead. You might be pleasantly surprised. State clearly your terms and intentions and follow through on them. Nothing angers a seller more than delays and excuses. As radio equipment is generally bulky and fragile, allow for a reasonable amount of money to package, insure, and ship your purchase properly. Payment terms should be similar to those suggested under seller's guidelines, and should reasonably protect your position (remember, you are probably buying equipment sight-unseen from a relative stranger), but remember that he needs to protect his position as well. If you are unsure of a given seller, ask a net-regular discreetly via E-mail. He or she will be more than happy to either ease your concerns or confirm your suspicions.

In general...

When you post to rec.radio.swap, be sure to use a meaningful Subject: line. "FOR SALE" or "WANTED", by themselves, give little information to the person skimming through the group by looking at the message subjects. "IC-32AT dual band 144/440 handheld for sale, $400" is much more useful; if the reader is looking for HF transceivers, he can skip right past your message. If you have lots of different things for sale, try to give as much information as you can, but remember that most systems get unhappy at Subject: lines longer than 80 characters, and a few older ones truncate them at 40.

It's generally a good idea to include your geographic location and a phone number where you can be reached somewhere in your posting as well. Besides reassuring your potential buyer or seller that you are a real person, it's often easier to bargain and make other arrangements on the telephone than through a protracted electronic mail exchange. Some buyers prefer dealing with folks in their local area, too, as that makes it easier for them to inspect the equipment before paying money.

The Usenet marketplace groups in general, and rec.radio.swap in particular, are a great place to buy that piece of gear you've had your eye on. Items go quickly for reasonable prices. I've sold a radio within three hours of posting the for sale message. The usefulness of these groups depends to a large extent on the people who inhabit them, though, and a few unscrupulous users can

easily sink the whole thing. Whether you are a buyer, seller, or seeker of equipment, remember that your honesty and integrity reflects on the general reputation and usefulness of this forum and amateur radio in general.

638. FS Ham radio stuff....

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-08 00:00:00 UTC
From: nateh@colwellind.com
Message-ID: <868400402.776@dejanews.com>
Source record: 194023
Cross-posted to:
rec.radio.swap,rec.radio.amateur.misc,ia.market,isu.market,rec.radio.amateur.equipment,rec.ham-radio.swap,ne.forsale

I have some ham equipment that I don't use anymore, and I need to get some quick cash. All of the listed equipment is in very good condition.

1 Heathkit hw 101 10 - 80 meter tranceiver. 100 watts. With matching power supply. This is an excellent radio that has always performed well. It is in excellent cosmetic and operating shape. Best Offer. Great beginners radio (it was my first).

1 Palomar 10,15,20,40 meter .5 kilowatt amplifier. Works great. With matching power supply. Best offer.

1 wartime antenna tuner(?). New condition. Don't know the vintage of this thing... I have tried to find out several times. I don't have the model numbers in front of me, but if anyone is interested let me know, and I will send them to you. Also I have some meters (swr, power etc) that I will throw in if you buy something.

I really need to sell these things as soon as possible. I will take any *reasonable offer.

thanks

nate

Yeah just like fag spammers. Go spam rec.radio.amateur.queer.homo or
something. Maybe Richard Depew can get all your flaming homosexuals you
own newsgroup. I included this guide for rec.radio.swap for you and your
sweethearts.
Remember to practice safe sex with your buddies. Bye fruits...

That's "prurient" and I would strongly suspect that Gayle would prefer that his interests (towards her anyway) *NOT* be "prurient." You really should look up those big words before you use them ;)

Welcome to ham radio Gayle, ignore the sniping that you see going on in here, as one of the previous posters remarked, there's thousands of lurkers that seldom post , but they are there if you need any help or advice :)

I would also suggest a number of other things to look at.....
1. check your earthing is OK, if you are a way up from a reasonable
ground then run 1/4 wave radials for each band, though I use ones for
80, 20 and 10 they seem to keep RF quiet on all bands. Remember to tape
off the ends from pets or anyone who may accidentally touch them and get
a nasty RF shock.
2. Be conservative in the amount of speech compression you use on SSB or
excessive harmonics can be generated, on a high power amp, keep the ALC
well back.
It's not always the fault of the amateur, the equipment makers
sometimes design nice looking cases with front-ends that have very
little immunity to RF. It's been a problem for years with domestic
equipment, the Regs. here in Europe were supposed to be tightened some
years ago, making the makers responsible if it could be shown that your
RF output is "clean".
Regards

Make MONEY...
The fact that so many people have taken the time to post to 250 newsgroups
or more should convince you that this one REALLY works!!!!! Look at this
man's story, then the rest of the original:

I thought, what the heck, I'll try it. It's only six dollars. I didn't do
it right at first, I only sent out to about 30 newsgroups. But, I got back
my six dollars and actually made $159.37 in a week (someone put
some change in the envelope). Anyway, now I'm going to do this the
right way; send out to 250 newsgroups! The rest of this letter is just a
cut and paste from the original. All I can say is that it works. I
would never have believed it if it didn't happen to me. Just remember, we
must all follow the rules. Be HONEST and FAIR and you will make money!
Sure is a lot of mail though!

Thanks for reading!
C.L.
^^
MAKE A FORTUNE - AND THIS IS THE ABSOLUTE TRUTH!

IF YOU HAVE READ THIS FAR YOU HAVE ALREADY PROVED IT WORKS!!

Take just 5 minutes to read this and see.

This is the newest updated version.

As I was surfing the net, I read all these postings on how you can make
over $50,000, even $800,000.
Well I believe that if all goes well, and you follow the rules EXACTLY,
it
will work. Just follow the
instructions given in this letter, and you to can make over $800,000,
perfectly legally according to USA
Post Office Laws (read on for specifics). Don't look at this as a
money-making scam, but rather a true-to-
life example to test the above statement. It will only cost you $6
dollars
plus 6 stamps, and a few hours of
your time. Thus, there is some effort involved, because nothing in life
is
absolutely free. Are you ready

and willing to accept that you deserve to receive a fair amount of money?
If so, please continue reading.
But if you think this is just another scam, I suggest that you don't try it.

PLEASE NOTE: THIS IS A 6-PERSON LIST, NOT THE USUAL 5. PLEASE DO NOT TRY
TO CHEAT THIS PROGRAM. JUST ADD ONE NAME AND REPOST THE ARTICLE. IF YOU DO
NOT IT WILL NOT WORK, AND YOU WILL BE REMOVED. FROM THE LIST! FOLLOW THESE
DIRECTIONS AND JOIN US IN A GREAT OPPORTUNITY!

The program has been revised and you will notice six names instead of five.
The reason for this is the
flood of five name programs and the sixth name will add $50000 to $100000.
This is proven mathematically and in my bank account. I never really thought that this program would work, but IT DOES and it will for you too.
Just be patient and follow the directions exactly. Print this article now,
so you have all the information for your version. Remember to keep the names right. Let's go!

STEP 1

Invest your $6 by writing your name and address on six separate pieces of
paper along with the words:
"PLEASE ADD ME TO YOUR MAILING LIST".
(In this way, you are not just sending a dollar to someone; you are paying
for a legitimate service.)

People have asked me if this is really legal. It is! You are using the Internet to advertise your business. What is that business? You are assembling a mailing list of people who are interested in home based computer and on-line businesses and methods of generating income at home.
Remember - people send you a small fee to be added to your list. It is legal. What will you do with your list of thousands of names? That's up to
you, but this is how it becomes legal. To be legal you must actually sell a
product or service if you expect to receive a dollar. Anyone sending a dollar back to you must receive something in return. You have already received this letter due to the participation of each of the 6 persons listed below. This letter and the plan given within this letter are a "product" that you have received. Thus, you will be sending $1.00 to

each
of the 6 persons given below in exchange for receiving this letter and
for
asking them to provide the "service" of adding you to their mailing
list.

THIS IS A SERVICE AND IS A 100% LEGAL BUSINESS OPPORTUNITY WHICH I
COVERED
IN TITLE 18, SECTION 1302 AND 1342 OF THE POSTAL AND LOTTERY LAWS.

Now, please follow the given steps exactly to receive your desired
amount
of money:
Immediately send $1 US cash (a one dollar bill, no checks, no money
orders)
to each of the 6 people on the list below. Wrap this dollar in a note
with
the words: "Please add me to your mailing list." (In this way, you're
not
just sending a dollar to someone, you're paying for a legitimate
service.)
Also, to discourage those who prey on cash in the mail, be sure the bill
is
completely hidden by the note. A woven envelope is recommended. Include
your address. You do not need to include your name. This is the key to
the
program! Also, let each person know what number they are in your letter
so
he/she knows which cycle he is receiving the $1.00 from. Make sure that
you
retain EVERY name and address sent to you, either on computer or hard
copy,
but do not discard the names and notes that people send to you. This is
PROOF that you are truly providing a service, and should the IRS or some
other government agency question you, you can provide them with this
proof.
Therefore, you will start a list of all the people who send you a
dollar
requesting to be added to a mailing list. Actually, you will want to
safeguard this list because it can generate even better responses and
much
more money later! Fold a $1 bill inside each paper, and mail them by
standard mail to the following six addresses:

1) Rudolfs Osins
Aspazijas 37-4
Jelgava, LV 3001
Latvia
2) J. DiMauro
89 East Squire Dr. Apt. 1
Rochester, NY 14623

USA
3) D. Fenter
24 Hornsilver Place
The Woodlands, TX 77381
USA
4) R. LAWSON
P.O. BOX 842
BRISTOL,VA.
24203-0842
USA
5) B. Cody
1156 Auraria Rd.
Dawsonville , GA
30534
U.S.A.
6) C.L.W.
3015 So. Coker St.
Greenwood, AR.
72936
USA

STEP 2

Now remove the top name from the list, and move the other names up. This
way #6 becomes #5 and so on. Put your name in as the #6 on the list
(Remember to take #1 off and change the numbers so #2 becomes #1, #3
becomes #2, #4 becomes #3, #5 becomes #4 and #6 becomes #5 and you become
#6.)

STEP 3

LET ME TELL YOU HOW MUCH MONEY YOU CAN MAKE.

How do the numbers work for potential income earnings? Assume for the sake
of example that you get a 7.5% return rate. This is very conservative; my
first attempt was about 9.5%, and my second was over 11%.
1. You send out 200 letters, and 15 people (7.5% x 200) will send you $1
each. $15.00
2. Those 15 send out 200 letters each, and 225 people send you $1 each.
$225.00
3. Those 225 send out 200 letters each, and 3,375 people send you $1
each.
$3,375.00.
4. Those 3,375 send out 200 letters each, and 50,625.00 people send you
$1
each. $50,625.00
5. Those 50,625 send out 200 letters each, and 759,375 people send you
$1

each. $759,375.00
6. Those 759,375 send out 200 letters each, and 11,390,625 people send you
$1 each. $11,390,625

TOTAL $12,204,240.00!! That's 12 million dollars. If those figures sound
incredibly high, figure
that even with half the return rate, or even a quarter, the total is still
spectacular. It works every time, but how well will depend on how many
letters you send. In the above example you mailed out 200 letters. This
sounds like "pie in the sky," but the numbers add up, and with over 40
million people on the NET, it works! TIP: For an even greater return,
post to MORE than 250 newsgroups initially; try for 300-350. When your
name drops off a list, simply access another message from a newsgroup and
start the process over again. Post the new article to at least 250
newsgroups. remember, the more you post, the more people see, and the more
you get. There are at least 25,000 newsgroups at any one time. This is a
$7.92 investment. It takes about a week or so to start seeing a return-so
be patient. The money should flow for about 3 months. At that point, simply
add your name to the list and start over. I've done this three times and
now I can quit my job and start investing in real estate full time. I
assure you this can work. If you mailed out 500 letters, you could have
received even more! Check the math yourself, but I guarantee it's correct.
With this kind of return, you have got to give it a try! Try it once, and
you'll do it again. Just make sure you send a dollar to each of the
addresses on the list above with a note asking to be added to their mailing
list. Together we will all prosper and we will be able to share our wealth
with those less fortunate than ourselves.

GOOD LUCK!!

GENERAL STEPS ON AUTOMATING THE PROCESS

If you have Netscape 3.0 do EXACTLY the following:
1) Click on any newsgroup like normal, THEN click on 'TO NEWS', which is
on the far left when you're in the newsgroups page. This will bring up a
box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to
something
flashy, like, "NEED
CASH $$$ READ HERE $$$ or "FAST CASH"!!!

3) Tab once and you should be ready to type. Now, retype (only once)
THIS
whole article WORD FOR WORD, except insert your name at #6, and remove
#1
off the list, plus any other small changes you think you need to make.
Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS
BOX,
RIGHT ABOVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX.
Click
on SAVE AS when you're under FILE. Save your article as a text file to
your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO
THIS.
Once saved, move on to number 5 below. NOTE: If you don't want to type
in
the whole article by hand, AND you know how to use a plain text editor
(like Notepad), you can edit the file ahead of time, then attach it as
shown in step 6.

5) If you still have all of your text, send or post to this newsgroup
now
by just clicking send, which is right below FILE, and right above Cc:

6) Here's where you're going to post all 200. OK, click on any
newsgroup
then click on 'TO NEWS', again in the top left corner. Leave the
NEWSGROUPS BOX alone again, put a flashy subject title in
the SUBJECT BOX, hit TAB once you're in the body of the message. Click
on
ATTACHMENTS, which is below the SUBJECT BOX. You will get another box
to
come up. Click on ATTACH FILE, then find YOUR file that if you did this
right, you should see your file name in the attachments box, and it will
be
shaded green. NOTE: If you don't want to type in the whole article and
you know how to use a plain text editor (Notepad), you can edit the file
ahead of time, then attach it.
****
1) IF YOU USE I.E. EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT
MOUSE BUTTON, highlight this article. Then press the "ctrl" key and the
"c" key at the same time to copy this article. Then print this article
for
your records, to have the names of those you will be sending $1 bills
to.

2) Go to the news groups and press "post an article". A window will
open. Type in your headline in the subject area and then click in the

large window below. Press "ctrl" and then "v" and the article will be placed in the window. If you want to edit the article, do so and then highlight and copy it again. Now every time you post the article in a new
newsgroup all you have to repeat is "ctrl" and "v" and press post.

3) That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way it posts to 200 DIFFERENT newsgroups, or
more. You see? Now you just have 249 to go!! (Don't worry, each one takes
about 30 seconds, once you get used to it. REMEMBER 250 IS THE MINIMUM. But the more you post the more money you will receive. AND THAT'S IT!! THEY ARE ONLY STEPS!!!

(this is a later addition for extra ease of posting)

EXTRA TIPS:

(ONLY) IF YOU ARE CONFIDENT WITH YOUR COMPUTER YOU CAN AUTOMATE YOUR POSTINGS (and prevent spamming) AS FOLLOWS: (THIS Replaces the previous section only i.e. 'GENERAL STEPS ON AUTOMATING THE PROCESS') (using Netscape):

As you are reading this message click on "file" - "save message as", enter
a filename in the 'save as' dialog box, press "enter". Now open "Notepad"
(usually from "start" - "programs" - "accessories") and open the message (
"file" - "open") you just saved. (You will find it in the same folder you
saved it and you may also find it has a '.html' file extension). Then edit
the letter EXACTLY as you have been directed above.
Just make sure you delete the 'system-message' that appears at the top so
that it makes sense when you read it! Click on "edit" - "select all" (all
the text should now be highlighted) then again "edit" - "copy".
Leave Notepad alone for now and return to the Netscape News program:
Click on "options" - "show all newsgroups". Now select (subscribe to) whichever groups you think are suitable by moving down the entire listing
and clicking in the appropriate empty boxes. Once you have finished click
"options" - "show subscribed newsgroups". Now simply click on the first group you want to post to, to highlight it. Then choose the group about 10
further on and WHILE HOLDING DOWN
THE SHIFT KEY click on it. Next click on "file" - "new news message". A

message box will appear and after entering the "flashy" subject line, position the cursor in the main message area. Click on "edit" -"paste"; the message will appear.
NOW CHECK IT!!
When you are satisfied everything is correct click "send" and it will be sent to all 10 groups. Now repeat as many times as you need- very simple!
PLEASE NEVER post to many more than 10 with any one message since the resulting long lines of newsgroup listings at the top of EVERY message will
annoy many AND will vastly reduce the effectiveness of your posting.

JUST ONE OTHER THING:

Let's remember that there are many people far less fortunate than ourselves
who will never be able to afford a computer and hence will be unable to join in our enterprise. Therefore please consider donating a (significant)
portion of your earnings from the venture to charity.

NOTE -- "edit" - "copy" is exactly the same as pressing "ctrl" with "c"
"edit" - "paste" is exactly the same as pressing "ctrl" with "v"

---

I am reposting this question again, because I have been told
that the signals that I hear on 154.465 Mhz are mobile data
terminals. I am not sure of that because I haven't ever
seen a MDT in any squad car or trooper's car in this area.
And all of the law enforcement agencies have their officers
radio in the license numbers to "run" them.
(I live in a rural area, far from a metro area- 95 miles) They have
to be originating somewhere close because I can get the signals
full-scale on my portable- even when I am down in the basement.
I have noticed that when an officer calls in a license plate,
about 15 seconds later, the signals start up.
Could it be the computer at the Sheriff's office communicating
with the central computer in St. Paul?)

Here is a 14 second audio clip (11 khz, 8 bit .wav format)

Canadian callsigns have even less "crystal ball" value. Mine is VE7VDM. VE is Canada. VE7 is British Columbia. The last three characters I chose myself from a list of ones available - the normal method (no extra cost). It tells you nothing at all about my qualifications, and I would normally keep the same callsign as I upgrade.

There are some 5-character callsigns - apparently those are issued to hams who have held the Advanced qualifications for at least 10 years - but only if they request it.

Dave

Hello KR4WM:

I'll bet you have nice neighbors! I know several hams that transmit at high power (yes that is HIGH and not reletively high). Most have needed to buy high pass filters for various equipment for themselves and their neighbors. You can build these, but it's much easier to buy them.

I am supposing that you are running HF. If you are running VHF/UHF at these power levels, then other fixes are required.

Good luck.

ENUF already. This is the same thread as the goober wrote several months
ago wanting to talk to all his law enforcement buddies. REMEMBER???
Well, I guess like Burt, et al, he needs the attention. OK< I'll play.

It's impossible. OK, You're not a very good story teller. At least
compose a yarn that is credible. You're beginning to read like that clam
cake on Cape Cod.

At least be entertaining

BTW, you're not anonymous..you're that fool who calls himself MASA king
of spam

Spam BTW being registered trademark of Hormel Foods Corporation

Spam: Pork with ham (isn't that redundant?), Salt, water, sugar, Sodium
Nitrate

any questions call 1-800-686-SPAM

>This type of question comes up all the time, often as "am I allowed to
>talk over a jammer on the repeater?" Seems to me that you can't
>"interfere" (in the regulatory sense) with an illegal transmission.

Yes, I brought up this question about a year ago. It turned into a minor debate, which I tried to settle by calling the FCC and presenting the scenario to them: Unlicensed operators are working SSB on 10m. If someone transmits CW on the same freq'y, is that considered intentional interference?

FCC: For it to be intentional interference, you've have to be interfering with an authorized communication.

Me: So I take that to mean this would not be classified as intentional interference?

FCC: [same response as above]

Me: What if the unlicensed operators move to another freq'y within 10m, and our CW operator follows them, and then transmits on that new freq'y; would that be considered intentionally interfering?

FCC: [same response as above]

Me: Do I understand correctly that the fact they're not licensed to operate on 10m means their communication is unauthorized?

FCC: That's correct.

Me: Thank-you for your time.

Then, someone else called the FCC, presented the above scenario, and received a response saying that the letter of the law is not in question, just the spirit of the law. That poster was against the above hypothetical CW operator from the beginning of the debate, so his presentation to the FCC might have been a bit slanted... =:o

OK, so where do I find a power source on my bicycle?
A mobile's a bit bulky on the bus, and the driver probably
won't let me stick the 5/8 wave mag-mount on the roof. Come
to think of it, the mag-mount won't do me much good in a
subway tunnel with only inches of clearance up top.

666. Zenith XT Laptop HELP

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-09 00:00:00 UTC
From: w6ir@qsl.net
Message-ID: <33c30b2e.2086105@news.pacbell.net>
Source record: 193944

I just acquired a Zenith Data Systems XT laptop, model ZFL- 181- 93. Seeing as to how this is ancient history, I doubt I can find the info without asking. Does anyone know what the DIP switches on the bottom of the unit are for? Also, does anybody out there know how to interface (or have) a hard drive for this thing. It currently has 2 floppy drives in it and works fine for packet but would be even better with a small HD. Any info at all would be greatly appreciated.

Thanks,

Hank, W6IR

Hello,

Does anyone out there know of a way to get the display lamp (LED?) in my Kenwood TH-75A HT to stay on all the time. As it is, it will only stay on for about 10 seconds after the last key/button is pressed.

I'd love to use this radio in a dimly lit (or dark) car, and fumbling for the momentary contact light switch is something I'd like to leave behind.

I have heard that a number of HTs have a neat trick built-in: If you hold down the FUNCTION button and press the light button, the lamp stays on. It's too bad this doesn't work for the TH-75A.

Hi
You could always try dropping on to my C.D. page which has a
link to the Amsoft site ...you can download files that are on the
current "World of Ham Radio" 1997 C.D. and it is the only one I can
think of where

CW\CW_21 Is a Win95 CW Program

Cheers Paul g0rur

A local ham who happend to be mentally handicapped (low IQ) had his
antennas all of them taken by city police. Now we all know this is not
supposed to happen? But being unable to argue or defend his rights it
did happen! Goes to show you that you only have the rights that you
know you have and are willing to fight for!

From: ej.mars@lagn.com
Message-ID: <67802046@lagn.com>
Source record: 193957

HI
I would like some information on a Channel Master Combo. Both are all tubes units. The AM/FM receiver is a Channel Master Model 6612 and the Amp is Channel Master Model 6601. There are (4) 6BQ5 for the output. It is most likely a 25 Watt unit. I have the following Questions:

1) One of the 6BQ5 gets extremely hot and glows a bright red. Any Ideas on what could cause that?

2) Anyone have a schemetic or any info on both units?

3) What are their approx. values?

4) If interested, make me an offer or will trade for other Radio, Scanner or computer stuff.

Thanks
EJ (KC5EPI)

I was at a hamfest one time where the grand prize, a Kenwood HF rig, was won by an unlicensed individual. The hamfest people informed him of the requirement of a license in order to transmit on using the radio. The guy said he understood the requirements, and as far as I know, that's the last anyone saw of him.

The next year, the hamfest committee adopted a policy of showing proof of being a licensed ham before claiming any prize. If the person was *not* a licensed ham, they would be awarded an equivalent cash value.

Part 97 does not mention "remote bases" per se. You can operate a
remotely controlled station, of course, but you have to be a control
operator for the station, so of course it can't operate beyond your
license privileges. But we're talking about a cross band *repeater*
here, and that can operate under automatic control, and a Tech
is operating legally when he uses it because all of *his* transmissions
are on 2m where he is authorized to transmit. The repeater owner
must be licensed for the 10m frequencies on which the *repeater*
transmits, of course, but he doesn't have to be present while it is
operating, unless third party traffic is being passed.

Yes. It is rugged and has good front end filtering to keep out the pager crud.

>What Radio Shold I Buy ??
>
>Budget upto $500.00

With that kind of budget, I'd consider a dualbander instead of the
Radio Shack HT. Yaesu, Standard, and Icom make nice ones.
But I'd like you to consider *not* buying a HT as your first radio.
A HT is a specialist tool for foot mobile operation. You'll do much
better to buy a mobile radio instead. It'll offer much more power,
better audio for use in the car, and much better front end filtering
than is available for most HTs. This latter fact means you can
use it with a good external antenna without suffering extreme
overload and intermod problems. Of course you can use it in
the house too with a 12 volt power supply.

Those who have to listen to you on the repeaters will appreciate
your using a "real radio" instead of the Handi-Scratchie too.

>don't insert long round things in my mouth.

That's good, James. Continue verbalizing these fantasies. Get it all
out of your system.

>And I operate HF
>everyday,mobile,portable and at home. I have not found a soul stateside
>that has ever worked you.

Unless they're south or west of Hawaii and work CW, that's understandable.

>And yes I operated out of band quite a bit,

That comes as no surprise to us. I suppose that's better than taking
your hostility out on a group of innocent people with a weapon.

>Bur this takes some expertise,skill,patience and a mind,virtues that you
>obviously don't possess.

That's very good. Continue to focus those insults at me. It will help
to bring out all the repressed emotions you've kept bottled up for
so many years.

>As far as tapes go,sure,I'm popular! All those
>simpering puppies like yourself get their little feelings hurt when I
>tell them where to get off too.

Yes, they tell me they've got many hours of tapes - we can use those
in these therapy sessions.

>It's a shame you need the net to get
>info back to the mainland. It reflects your hf ignorance.

Been on HF for 21 years now. But that's not important - just keep focusing
- tell us what mental pictures cross your mind while you're typing these
insults. Your parents? Sibblings? Do you recall anyone beating you?

>No run along and see how far you and Jim
>Kehler can insert your craniums into Burt Fisher's rectum.

That's very good. What flashed across your mind when you thought that?
Did someone abuse you physically? We can eventually work out your problems
if you can only capture those mental images that are displayed while you're
releasing these hostile feelings.

See you next session!

Introducing R&R Visual Callsign Database CD-ROM.
Vol.1 June 1997.

R&R is a computerized look-up program developed by Octavia Company, Ltd.

We've been specialized in address information for the ex USSR Hams since 1989.
R&R gives you Guaranteed Quality of Information you simply cannot get
anywhere else!

On this disk you'll find the unique information source on Hams from
the former USSR.

Covers over 60,000 licenced Radio amateurs in Armenia, Azerbajan, Belarus,
Georgia, Kazakhstan, Kyrghyzstan, Moldova, Russia, the Ukraine, Uzbekistan,
Tajikistan, and Turkmenistan.

That's not all. Our newest R&R Visual Callsign Database CD-ROM now provides
a wide range of features:

Personal photos
QSL card images
Full date of birth
Year first licenced
Packet radio
WW grid locators
E-mail addresses
Club's membership
Special-event callsign(s)
Previous callsign(s)
Telephone numbers
Not just the official data
Advisor utility
QSL manager
CIS QSL Bureaus listing
Data export
Selection filter
Browse function
Easy installation with the program provided
Customizable screen layouts

and more...

Designed for Microsoft Windows 3.1x and Windows 95

Available directly from Octavia or through its distributors.

To request more product information or how to obtain R&R please e-mail
at ra6yr@octavia.kuban.su.

Even if he had been a genius arguing the point at the time of
confiscation would not have helped him. The courts were established for
argument of procedure not the street. Yes, it is a shame that the police
in whatever city this happened should have known better, but they were
doing what they thought was legally correct. The courts will show them
the error of their ways.

Now of course I'm sure that someone has by now sent our poor friend the phone number of a good (sic) attorney, who will not only fight to restore our poor unfortunate friends property, but will also fight to relieve the local taxpayers of about a gizillon dollars because of the actions of the big bad police. This will of course substantially reduce the good attorneys chances of ending up below the poverty line this year.

I didn't see the original post, because I have the foul-mouth plonked.
I'd just like to point out two things:

1) The statement that I usually send my posts from Sexzilla is a lie.
Anyone can check Deja News to verify this, or check my e-mail address.

2) Just because a site offers an open news feed does not mean that I
use the rest of the services offered on the site.

>That's "prurient" and I would strongly suspect that Gayle would prefer
>that his interests (towards her anyway) *NOT* be "prurient." You

I find it interesting that foul-mouth thinks in those terms, don't
you?

702. What is the MICRONTA brand?!

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-09 00:00:00 UTC
From: dvhunt@es.com
Message-ID: <868481652.1265@dejanews.com>
Source record: 193980
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

Does anyone know what the MICRONTA brand is? Radio Shack sells Micronta brand stuff and I want to know what it is.

As far as I can tell, it is other manufacturer products, but sold under the Micronta brand name to "disguise" it. IS THIS TRUE? Is there really NO SUCH MANUFACTURE as Micronta?! Is it just the "new Realistic?"

I have a Micronta device that specifically states on the model plate "manufactured for Radio Shack."

If this _is_ the case, does anyones know which manufacturers make which products?

Thanks,
Darvell

Actually, it's the "old" Radio Shack brand. Used to see it quite a bit
about 15-20 years ago on CB power supplies.

Good idea...As soon as I get the RTTY equipment up and going I will be operating in and around that area of the band..Maybe a few weeks of RTTY will make them want to return to the 11 meter band.

This type of question comes up all the time, often as "am I allowed to
talk over a jammer on the repeater?" Seems to me that you can't
"interfere" (in the regulatory sense) with an illegal transmission.
Maybe our resident attorney-in-the-know Phil Kane can give a definitive
answer.

710. Clegg FM-DX Manuals

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-09 00:00:00 UTC
From: markr@phx.mcd.mot.com
Message-ID: <5q11cp$3ao@drn.zippo.com>
Source record: 193988
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap,rec.radio.amateur.boatanchors

I'm looking for the service and/or operator manuals for a Clegg FM-DX 2m radio.

The radio came into my hands without a mike. There are only two wires where the mike was! In lieu of a manual does anyone happen to know what these wires are and if there are more wires used? If you have a service manual I'd be more than willing to pay for copying/shipping costs.

This rig also has the LED burnout "problem" - is there a Radio Shack part number for these LEDs?

Thanks for any help!!!!

With that attitude, I can see why you're a former ham, and also why
the hobby is dying (not quite dead yet).

> Does the CONTROL OP have to be PHYSICALLY present to make it legal?

No. The 10M repeater can under automatic control (unattended) unless it
is passing third party traffic. Amateur traffic from another band
(VHF/UHF) is not third party.

Regards

>Better look again, and a little closer. NOBODY in the U.S. can run AM
>below 28.5 Mhz. I like to run AM on 10 meters but I keep it from
>29.0-29.15 Mhz. because that's where its usually done.

From the ARRL Band Plan:

28.000-28.070 CW

28.070-28.150 RTTY

28.150-28.190 CW

28.190-28.225 Beacons

28.300-29.300 Phone

28.680 SSTV

29.000-29.200 AM

29.300-29.510 Satellite Downlinks

29.520-29.590 Repeater Inputs

29.600 FM Simplex

29.610-29.700 Repeater Outputs

It appears that the Part 97 allocation for Region 2 is for Phone from
28300 - 29700 for General Class and above with the Novice / Tecnician+
limited to SSB. The "gentleman's band plan" is as above.

73 de Tom, K4NR

There you go again. I'm no fag, Jamie. And instead of being capable of
debating me you resort to name-calling. Go get professional counselling
before you hurt yourself or someone else. You're a very sick person.

Note that my followup to your for-sale notice did not appear on the
rec.radio.swap NG - it was directed to .misc, for unlike you, I
know what NGs I post to (your two previous responses to my comments
to you on .misc went to .policy - you didn't even notice that I'd
directed your follow-ups off of .misc).

Now, you never answered my question: What expertise do you have to share with the folks on .misc? Do you have any specialities? Do you do any building? Do you know which end of a soldering iron to hold?

73, Jeff KH2PZ

Source record: 194039

A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah, right this must be a scam," but like most of us, but I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and addresses stated in the article. You then place your own name and address in the bottom of the list at #5. and post the article in at least 200 newsgroups. (There are thousands.) No catch, that was it.

You can make up to or over $50,000.00 in 4-6 weeks, maybe sooner! O SWEAR. I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested in making some big bucks, keep reading; if you're not, I apologize for wasting your time. So after thinking it over, talking to a few people first, I figured what have I got to lose except for 5 stamps and $5, right? One person who recently had tried it said it worked like a charm. He started getting money in the mail!! He was shocked! He figured it would end soon, and didn't give it another thought. But then the money kept coming IN-tripling in size and multiplying by 10-20 times the amount that he got the first week! In his first week he had made a total of over $1,000!!! In the third week he had over $10,000 dollars,and it's still growing! This is his fourth week and he's made about $42,000 Total, and believe it or not the money is still coming in...

I know this has been checked out several times with the legat communityand is deemed perfectly Legal, but being a very cautious person, I also wanted to check it out with the US Post Office. I called them (1-800-725-2161) and explained this process and asked if there were any regulations that would be violated by doing this. Without hesitation, the postal official also said it is legal. At that point, I felt comfortable going ahead and joining the process.

Let me tell you how this works and most importantly, WHY IT WORKS!...Also, make sure you print a copy of this article NOW, so you get the information from it, and being making money. The process is very simple, and it consists of 3 easy steps:

Step 1: Get 5 separate pieces of paper and write the following on each sheet of paper. "PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER #
Get fove $1 bills and place ONE inside each piece paper that you have just written on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosy people who like to steal envelopes with money in it will not get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should not have 5 envelopes sealed, each having a piecei of paper AND the $1 bill inside.

NOTE: Make sure those words that were stated above are writte on each piece of paper. Whay you are doing is creating a service by this. This is PERFECTLY LEGAL.. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses.

#1 D. Dixon
36 Ambrose Street
Charlottetown, PE C1A 3P4

#2 Cisnero
VLN 1151
Unit C-105
1601 N.W. 97th AV.
Miami, FL 33172

#3 D Carter
222 N Acadia Apt 2
Wichita, KS 67212

#4 K. Nguonly
215 Orangethorpe Av. #331
Fullerton, CA 92832

#5 B. Angel
1231 Calloway Circle
Lenoir City, TN 37772

Step 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becoems 3, etc...) amd add YOUR Name as number 5 on the list.

Step 3: Change anything you need to, but try to keep this article as close to the original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well, do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To News, which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used. something to catch the eye!!!

3) Not go to the message part of the box and retype this letter exactly as it is here, with the exception of your few changes. (Remember to add your name to number 5 and move the rest up).

4) When you're done typing in the WHOLE letter, click on FILE above the send button. Then, SAVE AS..DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE IT. (So you don't have to type this 200 times:-)

5) Now that you have saved the letter, go ahead and send your first copy! (Click the SEND button in the top left corner)

6) This is where you post all 200! OK, go to any newsgroup article and click the TO NEWS button again. Type in your flashy subject in the SUBJECT BOX, then go to the message and place your cursor here. Now click on ATTACHMENT which is right below the SUBJECT BOX. Click on attach file then find your letter wherever you saved it. Click once on your file then click OPEN then click OK. If you did this right you should see your filename in the ATTACHMENT BOX and it will be shaded.

NOW POST AWAY!!

IF YOU ARE USING INTERNET EXPLORER:

It's just as easy, holding down the left mouse button, highlight this entire article, then press the CTRL key and C key at the same time to copy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

NEXT, Go to the newsgroups and press POST AN ARTICLE type in your flashy subject and clickthe large window below. Press CTRL and V and the article will appear in the message window.** BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES.**Now re-highlight the article and re-copy it, re-copy it so you have the changes....Then all you have to do for each newsgroup is CTRL and V and press POST. It's that easy!!!

THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WLL MAKE11 BUT YOU HAVE TO POST A MINIMUM OF 200

This is WHY it works!

Out of 200 postings, say I receive only 5 replies (a very low example).

So then I make $5.00 with my name #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and psot the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here if the fun part, each of those 625 persons post a MINIMUM 200 letters with my name #1 and they each only receive 5 replies, that just made me $3,125.00!!! With an original investment of only $5.00!

AMAZING! And, as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So let's put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00

at #4 $224.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. Then start posting again. The thing to remember is, do you realize that thousands of peopel all over the world are joining the internet and reading these articles every day, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works?? I think so- People have said, "What if theplan is played out and no one sends you the money? So what! What are the chances of that happening, when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will work. You just hve to be honest. Make sure you print this article out RIGHT NOW; also, try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea is to make the money!!

GOOD LUCK to alland please play fairly and reap the huge rewards from this, which is tons of extra cash. **By the way, if you try to deceive people by posting the messages with yourname in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills., people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing a lot of moeny

There you go again. Instead of being capable of debating me you call
me a fag. Won't work, James. I'm here to teach you some debating skills.
First let's discuss the deeply seated hostility you're showing us. The
head shrinkers would say it's your way of crying out for help. The more
hatred you show, the more you're telling us you desire assistance in
dealing with nightmares living within yourself.

Where ever you reside, there will be a free counselling service for low-
income folks nearby (ain't socialism great?). Now go make an appointment.
Don't be scared - they're there to help you.

Jeff KH2PZ

>it gets out of hand.

Not much you can do about it, unfortunately. The FCC could care less
these days. Ham radio and CB issues have become a "nuisance" to them
because they take up their time and do not produce any corresponding
revenue for the government. As for attempting to override them with a QSO
on the frequency they're using, good luck. Most CBers have bigger
amplifiers in their vehicles than a ham would ever think of using. Here
in Orlando, the multiple-battery, multiple-alternator setups start at 1KW
and go up from there.

Do you need HAM Radio clips for QSL cards, HAM newsletters, or your HAM web pages?

N7LN HAMWARE is introducing a new HAM Radio clipart CD to satisfy all of these needs.

But since the clipart only fills up half of a 650 Meg CD, the rest of the CD has been crammed with useful HAM files, like the following:

o Complete US callbook, hard disk installable (60 Meg)
o HAM Radio programs: packet, antenna, morse code, etc. TONS!
o HAM Radio information files: freqs, RACES, SWL, ARRL, etc.
o Morse code practice on CD audio tracks -- 20 mins to listen to on any standard audio CD player!
o Around 500 or so images directly related to HAM Radio, including state maps, flags, HAM logos, antennas, radios, etc.
o 1500+ total images, including many topics not directly related to HAM Radio that HAMs may wish to put on their QSL cards
o MORE

This HAM Radio Clipart CD, with all of the above included bonuses, is only $19.95 with free shipping in the US!

Does this sound like something you need? If so, you can check out my web page at http://www.qsl.net/n7ln or contact me via email for more information (n7ln@qsl.net).

Thanks,
Darvell (N7LN)

Hi all,

I'm in the process of setting up a ham radio station in my classroom, which many of my students have a great deal of interest in. It should be operational sometime shortly after school starts again in September. Here's my idea:

I would love to schedule some contacts between other hams who are involved in science in some way, be they researchers, engineers, technicians or whatever. (At some point I will have helped a bunch of students obtain their own callsigns, but for the present I'll use the station myself to (hopefully) hook up my classroom with people who are interested in helping me "push the envelope" as far as science education is concerned. We have all sorts of ambitious projects under way in my classroom, many of them involving exotic lasers. But we'd be very happy to talk (briefly or at length) with anyone who can offer a perspective on science, technology, jobs involving either, or lot of other stuff I can't even think of right now!!

If you'd like to help us out, by all means send me some email and we'll set something up. Thanks in advance to all who reply!

73,
pat

Great! When will the handheld version be available?

I'm working on a new UDP protocol, perhaps you would like to implement
it on your web site. It's called CWTP "Continuous Wave Transport
Protocol". It will allow you to send morse code over the Internet and
you can even call CQ with multicast.

I have one very nice condition Realistic HTX-202 2mtr transciever with box & manual to trade. I am looking for several different scanners presently. If anyone has one on the following list and would like to discuss a swap for my HTX-202, let me know. Here are some of the ones I am looking for at present: Regency MX-7000
Uniden BC-760
Uniden BC-2500
Realistic Pro-2026
Realistic Pro39
Realistic Pro-43
Realistic Pro-46
In the above listing, I need full coverage 800mhz with no gaps. I am only interested in swapping within the United States. Any interested parties, please e-mail me with details on your unit. Thanks for reading my post.
Regards,
Ray Miller N2NJK radioman@localnet.com

I've got some questions for you. Why is it the University of Hawaii knows nothing of you. Could it be you have an illegal shell account ? And as far as what I have to offer I've researched your posts. All you do is flame on a consistant basis. If your so straight why do you continually dodge my question about why you are'nt married? What does me soldering have to do with you being a flamer that cavorts with proven homosexuals.

Hi all,

After 18 years a 'ham' I have just discovered award hunting. I am really enjoying it.

I have now started on the All USA Counties Award and I really do need a logbook-database for this award.

Would someone kindly point me in the right direction for obtaining this program.

Many thanks...Jim...ZL2BMH

733. New Ham Poll Quest."How much time are you on-the-air each week?"

Yes, especially *YOURS*, according to your flawed logic if the CB'ers showed up on 14.313 (no different than 28.0xx) then all of the *LICENSED* operators would be in violation for causing interference. I hardly think so. (Though if might be hard to differentiate who's who)

Prove me wrong , I want "fact" not "opinion"

As far as being a "vigilante" , I use the term "self policing" , in my area at least, persons who cause malicious interference on vhf/uhf get tracked down and an end is made to their operation. Unfortunately it's much more difficult to do on HF.

Well, you would know, Spew. You have your finger on the pulse of all
the illegal activities in radio.... pinning coax, destruction of private
property, illegal operation on unauthorized frequencies, use of non-
type-accepted equipment and illegal power limits.

Yup, Spew, you're just a real asset to the radio community...

Darvell,
Just as "Realistic" is the Radshack brand for consumer products(radio,tv,stereo,etc.) "Micronta" is their brand name for test equipment(voltmeters and the like). Radshack is , to the best of my knowledge, not a manufacturer of anything,just a marketer. Their stuff is competitively priced, but you get what you pay for. Can't think of anything they sell that can't be outdone on price/performance with some careful shopping. An annoying policy they have is that of selling returned and "demo" merchandise as new and at full price. There may be others, but they are only large marketer I'm aware of with such an up-yours policy. You say "I'll take one of these", they take the well-fingered demo unit off the shelf, put it in a box, and ring it up at full price. I just say no. Check also the taped-back-together blister packs they have hanging on their hooks. Seems they have little respect for customers or retail employees. I find the latter to be poorly-trained, poorly paid and poorly-treated. Pay your money, and take your choice, but I'll shop elsewhere.

Stories like this always make me suspicious. Who was the ham? What
was the reason the antennas were taken down? Did the ham make any
threats to police/neighbors? I just can't picture police officers
climbing on a roof or up trees to do this. You need to provide more
details if you want to be taken seriously.
Jeff KH2PZ

751. "BIG WIND" COVERING HIS TRACKS !

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-10 00:00:00 UTC

Message-ID: <19970710034000.XAA22806@ladder01.news.aol.com>
Source record: 193911

Our little friend who is so concerned about other fellow's "balls" is scared silly. 41 message cancellations demonstrate how scared he really is! Any message where he has threatened someone or used bad language is being cancelled. Now he is making posts trying to look innocent, but we all know better.

What a big bully. The "big terror" of the newsgroups is now trying to look "picked on." For all of his hot air, he sure looks silly now.

And the funniest thing is: HE THINKS SOMEONE ACTUALLY CARES !

List of Recently Cancelled Messages:

Yep. We've got one of those, too, and it's also an incredible value.
The fellow indicated he wanted a basic controller, however, so I
didn't mention the 7K.

We also have a couple of the Link-Comm controllers out of Montana, but
I personally don't care for them as well as the S-Comm. They do offer
a wider range of features and options, but I don't think they can beat
the price, quality, and reliability of the 5K.

Hi Hank and Glen - You both misunderstand the situation. With well over
20 kilogroups on Usenet, any topic you can possibly cook up would be on-topic
somewhere. Antenna discussions are discouraged on .misc becaue there is
a NG (r.r.a.antenna) devoted to them; home-building discussions are dis-
couraged on .misc because there is a NG devoted to them. When we ask
folks to move off .misc it is not because we're tryng to silence or censor
them; rather, we're asking them to move to a more appropriate NG. If they
don't comply then it's appropriate to gently request their provider to
ask the user to abide by the charter.

If all 200,000+ of us decided to ignore the charter and post off-topic
remarks, this NG would be unreadable. Is that type of anarchy what you
truly desire? Would you quietly sit by and kill-file 200,000+ posters?

(One's lack of disipline on a NG can tell us quite a bit about that person.)

ZUT,
Jeff KH2PZ / KH6

757. Motorola Radios???

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-10 00:00:00 UTC
From: Jim Holt <COWBOY@ballistic.com>
Message-ID: <33C46DB4.484E@ballistic.com>
Source record: 193917
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Recently I aquired from an auction, at a very low price, 5 Motorola "Max Trac 50" mobile radios and a Motorola "Flexar" base. Does anybody know anything about these radios or how I would be able to change the frequencies to ham bands.

Looking for a used HP 3326A channel synthesizer (a glorified 2-channel, DC-13MHz signal generator). If you have one or know where a "garage researcher" can buy one cheap, please let me know.

Alternate suggestions welcome. I need 2 channels sine wave output, phase adjustable, low voltage, 1MHz max.

Direct e-mail replies are doubly appreciated.

Thanks.

Enjoy,
Dave

Notice how Jimmie is cleaning up his act. He is TRUELY running scared,
just like a third grade playground bully. No more threats, and thank God,
no more long dissertations about other guy's "balls."

He has also been pretty busy cancelling the messages that illustrate his
worst behavior. Guess he doesn't know that they are still accessible
within DejaNews.

And now, get this, he's complaining to other folk's ISP's that he is an
"innocent victim." The big bad bully *always* tells mommie he is being
picked on.

He is so delusional he thinks someone actually CARES !

: details if you want to be taken seriously.
: Jeff KH2PZ

Actually, both stories are suspicious! No names, calls, etc. to follow up on,
just a comment thrown out. Many hams rallied behind the young EC in KY (I
think) who was "arrested" by the local police, and his radio taken for
"impersonating a public official", and I believe all charges were dropped.
There has got to be more to these stories! If not, get the ARRL involved,
and contact Newsline, etc. to get the word out. But, my feeling is that there
is more to the story we aren't hearing..... Let's hear it!

I disagree with with this. A wedding is one thing, but Usenet is quite different. It has a completely different protocol that isn't etched in stone as are proper rules of etiquette. I read many other newsgroups in which a person will ask for help in a particular area of interest. Many times, a poster will post a "thanks in advance" at the end of a message. I think different protocols ahve generally come to be accepted under different circumstances. A wedding is a formal event requiring a formal etiquette pratice to be followed. Can an informal message asking or thanking for help be compared in the same manner? Not so, IMO.

There is a way to kick the existing users off the band.

Reallocate the entire band (funny freqs and all) to the little leo group for about 30 years, and throw in several other well regulated users (broadcast links, point-point data, etc). The presence of high powered obnoxious legal users will convince the CBer's to upgrade right?

Not!

Here's the scary part. Someday when uncle sam decides to re-claim the current business bands (150-180 and 450-480, etc) he may find a lot of freebanders up there too. Ditto with cordless phones.

They did the right thing with cellular, at least there's only a few big companies who own the network. Pull their plug and the spectrum is re-claimed.

Too many of them have no idea where the ham band is. Having no regard for our turf, the have
even less regard for the band plan.

The silly part is it's illegal for us to ask them politely to leave since below 28.3 it's a CW
only portion of the band. You'd think persistent CW would give them a hint, but it's just jamming to them, and you're supposed to ignore jamming, right?

That said, and assuming the band is dead at the time, I see no reason trying to politely remind folks that above 28Mhz is ham radio turf, and "if you're really a licensed ham, the SSB
sub-band begins at 28.3" If you succeed, great, if not, the band is no worse off.

>circumstances it would/would not be legal.

Technically, that isn't "remote base", but a linked repeater.
(No big deal -- just a clarification.) In any case, this sort of
operation is completely legal, so long as the Novice, Tech, or
Tech+ is transmitting within the scope of their license. For
Tech/Tech+ that would be any UHF/VHF band, but I wouldn't
expect to see many Novices, since they do not have access
to the popular VHF/UHF repeater bands.

The key point is that you are responsible ONLY for your own
transmitter, not the transmitter that someone else may be
linking onto another band or sub-band. The whole thing
can be completely automatic, with no control operator
intervention. (Don't confuse this with "third party traffic"
which a completely different matter, and does not apply to
your question.)

No, the FCC has said that they won't consider it
intentional interference if you interfere with a
station not authorized to operate on the frequency
you and he are using. But if you start sending CW *to*
them, your intent is to communicate. You can't do
that. It is illegal for amateurs to attempt to communicate
with non-amateur stations (exception is made if it is a
government station authorized to communicate with
amateur stations, for example if an FCC monitoring
station calls you, you can answer).

>OK, so where do I find a power source on my bicycle?

I use a 12 volt gel cell on my mountain bike. That will last as
long as I do before needing recharging. :-) But you can use a
wheel mounted bicycle generator to improve how long you can
talk. Or you can mount a solar panel on the bike to help keep
the battery charged while you operate, and recharging when
you stop for breath and to stretch your legs.

>A mobile's a bit bulky on the bus, and the driver probably
>won't let me stick the 5/8 wave mag-mount on the roof.

On MARTA, there are prominent signs telling you that you
can't use a radio, tape player, or CD player on the bus or
subway. But if your transit system isn't so strict, you can
use an old bagphone case to carry both radio and gel cell.
You probably won't be allowed to rig a magmount on the
roof, but even a short telescoping whip on the radio will
work better than the average rubber ducky, especially
since you can use more power than a HT outputs with it.

>Come
>to think of it, the mag-mount won't do me much good in a
>subway tunnel with only inches of clearance up top.

Neither will a HT with rubber ducky. It's amazing how all
that rock attenuates signals to places outside the tunnel.

I find a HT useful when using it as a short range link back to the vehicle radio which can boost its signal. And I find a HT useful for short range simplex contacts when I'm walking around at a hamfest or public service event. But it isn't a good substitute for a mobile rig for general use.

1960ish Motorola FBI Field Radiophone

Portable batery powered transciever, phone handset with transmit button, TX/RX on 163.825 national FBI calling frequency. All tubes intact, functional, in excelent condition. Minor surface corosion on battery terminals, can be cleaned no problem.

Technical Specs:

12"x4"x6"
Handie-Talkie FM Radiophone
Motorola, Inc Chicago
Model H23-1
Serial # F-9054
RX 163.825
TX 163.825
Transmiter Type NU105

Best offer or trade for SSB CB, handheld scanner, or handheld 2m radio.

Does anyone have any information on techniques for measuring receiver desense?
I am looking for a means to measure the effects of a laptop computer operating in close proximity to 400MHz FM voice and 800MHz data radios. Access to equipment (sig generators, spectrum analyzers, etc.) is not a problem.

Thanks in advance,
Gary

>some who like to listen to cell phone conversations have made a
>science out of determining their scanners IF(s) and listening to the
>image frequency which is the cell freq + the IF.

An image will always be spaced 2*IF from the frequency indicated
on the tuning display of the radio. Whether that's 2*IF above or
below the indicated frequency depends on whether the receiver
uses low side or high side injection.

So if you were listening at an indicated 909 MHz, the scanner has a
10.7 MHz IF, and the scanner uses low side injection, then the cell
frequency being imaged will be 887.6 MHz. If the scanner uses high
side injection, indicated frequency will be cell frequency - 2*IF. In this
example, it would be 866.2 MHz. That's locked out too, so in this case
you're hosed if your scanner uses high side injection.

It doesn't matter what the display indicates, however, if your intent
is to exploit a weakness of superhetrodyne design in order to monitor
cellular phone transmissions. It is still a federal crime to listen under
the ECPA statute, and it is also a violation of the Communications
Act of 1934 (as amended) to divulge the contents of anything you
might hear, or to profit by any information you might have gained
by listening. Of course lots of people do it anyway, being scofflaws,
but that doesn't make it legal.

In the proximate case, two federal statutes were violated, but local police generally don't have jurisdiction in federal cases. However, many states have their own anti-eavesdropping statutes, and local police can act under the color of those.

That's true, you can manually hack the system and create a directory without making an entry in the active file. But that isn't usual practice. Normally when a hierarchy is created, group creation control messages will be generated for every level of the hierarchy tree. The news server will then automatically create both the directories and the entries in your active file.

If you're one of the relatively rare ultra-paranoid sysops, you may have the flag set to prevent automatic group creation, and do as you suggest manually. I don't think many full feed server sysops do this though. Sysops who only carry a partial feed may be more likely to do this.

That may sound reasonable, but it isn't legal for you to do. You aren't
permitted to attempt to communicate with unauthorized stations, and
you certainly aren't allowed to use SSB in that band segment. That
makes you worse than the freebanders, because you're supposed to
know better. Two wrongs don't make a right (but 3 lefts do).

Buy a mobile rig. Ya know, the kind you install in your car. Run it off a 13.8V power supply and get a real antenna.

Lot's of choices for $500. You can even build one yourself (Ten Tec).

You'll find that the HT really isn't that useful as a portable radio at first. To use in your car, you need a good antenna, or at least a magnet mount. To use walking around, you'll find that Tx power is not enough with building and trees.

I was told this too, but I didn't listen back then.

Introducing R&R Visual Callsign Database CD-ROM.
Vol.1 June 1997.

R&R is a computerized look-up program developed by Octavia Company, Ltd.

We've been specialized in address information for the ex USSR Hams since 1989.
R&R gives you Guaranteed Quality of Information you simply cannot get
anywhere else!

On this disk you'll find the unique information source on Hams from
the former USSR.

Covers over 60,000 licenced Radio amateurs in Armenia, Azerbajan, Belarus,
Georgia, Kazakhstan, Kyrghyzstan, Moldova, Russia, the Ukraine, Uzbekistan,
Tajikistan, and Turkmenistan.

That's not all. Our newest R&R Visual Callsign Database CD-ROM now provides
a wide range of features:

Personal photos
QSL card images
Full date of birth
Year first licenced
Packet radio
WW grid locators
E-mail addresses
Club's membership
Special-event callsign(s)
Previous callsign(s)
Telephone numbers
Not just the official data
Advisor utility
QSL manager
CIS QSL Bureaus listing
Data export
Selection filter
Browse function
Easy installation with the program provided
Customizable screen layouts

and more...

Designed for Microsoft Windows 3.1x and Windows 95

Available directly from Octavia or through its distributors.

To request more product information or how to obtain R&R please e-mail
at ra6yr@octavia.kuban.su.

The owner/trustee of the equpiment can limit it's use as he/she sees fit.
There's nothing in part 97 that says he *has* to let *anyone* else use his
HF gear.

MIR, SHUTTLE QSO VIA HAM RADIO!

Ham radio has served as a convenient "chat" medium between the US space shuttle Columbia and the troubled Russian Mir space station in recent days. Last weekend, shuttle Commander Jim Halsell, KC5RNI, had two short, direct contacts on 2 meters with fellow astronaut Mike Foale, KB5UAC, aboard Mir. The first ship-to-ship SAREX/MIREX contact happened Saturday, July 5, at 1202 UTC during a Mir/Columbia "conjunction" over the Indian Ocean when the two spacecraft were only some 50 nautical miles apart. The contact lasted less than a minute. A little while later, with both spacecraft over the Pacific Ocean at 1336 UTC, another 30-45 second contact took place, according to Will Marchant, KC6ROL, of AMSAT. Marchant said the shuttle crew could hear Mir a lot longer than Foale could copy the shuttle's signal--due to Mir's superior antenna and higher power. "The shuttle crew was pretty excited about their contact," Marchant said. Shuttle Pilot Susan Still

reported observing Mir through binoculars while the ham radio contact was under way.

But the best QSO was yet to come. On Tuesday, July 8, 1900 UTC, Foale contacted the Johnson Space Center Amateur Radio Club station W5RRR, and, using a phone patch, the club patched through NASA's communications circuits to the space shuttle, enabling Foale to speak at length with the Columbia crew. During the ten-minute contact, Foale filled in his fellow astronauts about the situation aboard Mir, where a Progress supply rocket had just successfully been docked.

"We'd like to invite you to visit Mir," Foale said to the shuttle crew, which respectfully declined. Foale said the arrival of the Progress was "almost like Christmas." He said his personal items still in the damaged Spektr module had been replaced, along with a videocassette player. Foale told Halsell the Mir crew enjoys watching American movies when they have the time. He also told his fellow astronauts aboard the Columbia that he had not had a chance to see any of the pictures from the Mars Pathfinder mission as yet.

Foale said the Progress carried tea, coffee, chocolate and even fresh food, something that made the shuttle crew envious since they had long since consumed all of their fresh food. Janice Voss, KC5BTK, who flew with Foale on the STS-63 Mir rendezvous mission, said the two space programs were so intertwined that she had a package of Russian corn aboard the shuttle. Foale replied that the tea which he had just drunk (the first hot tea in a while) was the typical instant tea that's part of the shuttle's pantry.

During the contact, Mir passed from northwest to southeast, and Foale reported looking out of the flight engineer's window and seeing Florida. The shuttle was approximately 1000 miles further west. During a communication "handover" break, fellow astronaut and capcom Bill McArthur, KC5ACR, got a chance to exchange a few words with Foale. Foale also talked to astronaut Mike Gernhardt and gave Mir flight engineer Sasha Lazutkin the opportunity to talk to the shuttle crew.

NASA TV has aired segments of the Mir/shuttle conversation. Other Columbia-Mir conjunctions will be possible through the mission but whether another contact is attempted depends on the Columbia and Mir work schedules.

In a separate conversation via normal NASA communication channels, Foale told NASA chief Dan Goldin that he felt spoiled by the good communication with his family that ham radio has made possible. "Mike was really thankful for having ham radio onboard -- he enjoys talking with everyone," said SAREX Principal Investigator Matt Bordelon, KC5BTL, who was on hand at the time.

Meanwhile, the MIREX support team--Miles Mann, WF1F, and Dave Larsen, N6CO--has been handling family traffic for Foale via ham radio and attempting to help Foale with his radio problems (the Mir's transceiver was cutting out on high power because of a circuit overload). In a packet message to Larsen, Foale expressed the gratitude of the Mir crew "for all the good wishes and interest over the world, in our troubles and

tribulations." Foale singled out for special mention "the few hams who work tirelessly on our behalf" to pass personal messages. Foale said that he and his wife were "extremely grateful to those hams who pass our messages for us." He also expressed appreciation for "how the world press is reacting to our situation." Added Foale: "We do not get this sort of opinion from our controllers." After the Mir's collision with a Progress cargo rocket, Foale said, "it was impossible to get any personal news of our well-being to our families" via the official communication channels. "Ham radio allowed us to fill the gap."

"We are particularly interested in longer contacts, than simple QSO exchanges," Foale said. "It is good to tell people about our life here on Mir, and our problems, but the lives of hams on Earth are also interesting to us, and I hope more hams will take the time to tell us about their QTH and surroundings also," he concluded.

W1AW Station Manager Joe Carcia, NJ1Q, reports W1AW was able to connect with the R0MIR-1 packet BBS on 145.985 MHz on July 8 at around 1600 UTC. The pass was at approximately 22 degrees. "We've been trying for weeks to connect," Carcia said. The message he posted was: "Hello from the staff and visitors from W1AW in Newington, CT. Good luck and 73."

On July 10, Foale told N6CO in another packet message that the crew was "extremely busy, trying to crawl through all the bags unloaded from Progress." Foale said the crew will do a training run on July 15 prior to the space walk to attempt to repair the damage and restore power to the space station. Foale will sit out the space walk in the Soyuz vehicle.

[Thanks to Philip Chien, KC4YER, Pat Kilroy, WD8LAQ, Frank H. Bauer, KA3HDO, Dave Larsen, N6CO, Joe Carcia, NJ1Q, Matt Bordelon, KC5BTL, and Rosalie White, WA1STO, for their contributions to this report.--Ed]

SAREX CONTACTS SUCCESSFUL

Ham radio has had a very prominent role in the shuttle Columbia mission STS-94, which continues until July 17. So far, the STS-94 crew--which includes three hams--has racked up 13 successful SAREX contacts with school groups as well as random QSOs with earthbound hams. Aboard the shuttle are Jim Halsell, KC5RNI, the mission commander; Janice Voss, KC5BTK; and Donald Thomas, KC5FVF, and the crew has been quite enthusiastic about ham radio on this mission. Case in point: KC5FVF, set up the orbiting ham shack and completed 19 random contacts before the "official" scheduled test pass.

A total of 17 schools, including one in the People's Republic of China, are scheduled to talk with the astronauts via Amateur Radio. During the earlier STS-83 mission, Columbia's premature return to Earth postponed all scheduled SAREX QSOs. Most were rescheduled for this "refly" mission, STS-94.

On Thursday, July 3, students at the Lexington Traditional Magnet School in Lexington, Kentucky, made contact with Columbia after a frustrating initial attempt. The youngsters spoke with Mission Specialist Mike Gernhardt aboard the shuttle via a telebridge to N6IZW in San Diego, California. All of the students asking questions are recently licensed amateurs.

On Friday, July 4, the students of Crittenden Middle School of Mountain View, California quizzed Commander Jim Halsell, KC5RNI, via the AMSAT Telebridge Network through Gordon Williams, VK6IU, in Western Australia. Five questions were asked and answered. In closing, the students chanted "Happy Independence Day, Columbia!" The youngsters also spent several minutes after the QSO chatting with VK6IU. A day earlier, the kids also got to meet with NASA Administrator Dan Goldin, in town for the dedication ceremony of the new teacher's resource center at the NASA Ames Research Center.

On Monday, July 7, 1355 UTC, the Columbia crew spoke with students at the S. J. Davis Middle School in San Antonio, Texas (via Steve Cerwin, WA5FRF). Fourteen students at the school got to chat with Halsell, and the school district taped the event. The youngsters got to ask six questions and five were answered. The contact was shortened by perhaps a minute or two at the start due to the "squint angle" of the window antenna. This happens when the orbiter's attitude is roughly "tail-down, main engines forward," says Pat Kilroy, WD8LAQ.

Also on Monday, at 1534 UTC, pupils at Burch Elementary School in Tyrone, Georgia, (via Bob Watson, KN4HH) got to ask the astronauts an even dozen questions. Teacher Kathy Akins reported an "excellent" contact with astronaut (payload specialist) Greg Linteris aboard the Columbia. On hand at the school were 75 people, mostly students, and a local TV station and two newspaper reporters also showed up to cover the event. The Burch QSO also encountered a brief delay because of the squint angle problem--again the beginning of the contact. "It was very good pass," Watson said. "Signals peaked at S9+20db at the 23-degree elevation point. We got a very nice slot on the 6 PM news."

And Monday, at 1705 UTC, a crowd of 600 was in the audience as youngsters at Artesia Public Schools in Artesia, New Mexico, (via Bob Perkins, KU5J) put 18 questions to the astronauts (17 were answered). The event drew TV coverage to hear astronaut Susan Still, and there was still a problem with squint angle at the beginning of the contact. "It was great!" said teacher Camille George. "She [Susan still] came through loud and clear. We are elated."

On Tuesday, July 8, pupils at Mountain View Elementary in Dewey, Arizona, started their day with a very nice chat with Halsell, via the station of Dave Boone, AB7JA. For most of the pass, signals were quite strong. Approximately 100 people were in attendance, and six students got to ask 11 questions. Several news media representatives were present and a local radio station did a simulcast of the QSO.

At 2152 UTC that same day, Jenny Dunklee's summer astronomy class at the Ione Junior High School in Jackson, California, was excited to be able to include a contact with Janice Voss on their second day of summer classes. Dunklee, who graduated from the University of California-Santa Cruz, just a few weeks ago was thrilled and spoke enthusiastically about this "great opportunity for my students" to learn firsthand about space exploration. After an initial delay because of the squint angle, signals were good for the remainder of the contact, which was broadcast live over local cable TV.

It was also covered by a local radio station and the Amador County newspaper. Fourteen students got to ask a total of 15 questions. The contact was done through the Honolulu, Hawaii, SAREX ground station at Sacred Hearts School. Nancy Rocheleau, WH6PN, was the control operator for the station, with Dick Flagg, AH6NM, assisting. The school reported that the students were dancing after the successful contact. (Flagg also provided the connection for Halsell to talk with his parents earlier on Tuesday. The crew also made random contacts with another 10 hams on Tuesday.)

On Wednesday, students and members of the Foursquare Radio Amateur Youth club, KE6SWH, were excited to complete a contact with Halsell aboard Columbia. The contact was routed through the W5RRR ground station at NASA Johnson Spaceflight Center in Houston. Larry Dietrich, WD8KUJ, was the control operator at W5RRR. Dan Lechliter, AC6NZ, linked via 440 MHz from the Oxnard High School auditorium to KE6SWH, which then patched the signal into the Telebridge provided courtesy of Darome in Chicago. The QSO occasioned media attention from KEYT-TV, Santa Barbara, as well as The Los Angeles Times and the Ventura County Star. The students completed eight questions and answers with Halsell. A number of the students had recently obtained ham tickets in preparation for the shuttle contact. Students were from Oxnard High School and Hale Middle School of Woodland Hills. According to Oxnard High Principal Daisy Tatum, the students were very enthusiastic and excited about completing the contact.

Also on Wednesday, students at Lawrence Intermediate School, Lawrenceville, New Jersey, enjoyed a chat with Halsell. Contact was established via AH6NM in Hawaii (with WH6PN at the controls). The school was telebridged into the contact with Jim Millner, WB2REM, coordinating at the school. Students asked 11 questions. The audience of 450 onlookers, included 150 science teachers. Among the local media were several TV and radio stations plus newspapers.

On Thursday, July 10, 2032 UTC, Alvin C. York Agricultural Institute, Jamestown, Tennessee, had what was described as "a difficult contact" with Jamestown native (and payload specialist) Roger Crouch at the mike of KC5RNI. As in earlier telebridge QSOs, contact was established by AH6NM in Hawaii, with WH6PN at the controls. Homer Delk coordinated at the school. Despite the very rough copy, the school reported five questions were answered. Crouch's mother was in attendance, along with local media that included two radio stations and several newspapers.

Successful SAREX contacts occurred Friday, July 11, with Dunn's Corners Elementary School, Westerly, Rhode Island (via telebridge), and Center Street School, El Segundo, California. Pupils at the Rhode Island school got to ask 16 questions of the shuttle crew, while the youngsters in California managed to put 22 questions to the astronauts during their contact.

On Saturday, July 12, the shuttle crew will attempt a contact via ham radio with Larry Pepper, 5X6A, in Uganda. Pepper is a former NASA flight surgeon who's now a missionary. The crew will use 2 meters to VK5AGR in Australia who will complete the circuit to Africa via phone patch. A SAREX contact with Tsinghua University in the People's Republic of China is set for Monday, July 14.

The STS-94 crew will use KC5RNI, KC5BTK, and KC5FVF on FM voice and W5RRR-1 on packet. They'll be available for random QSOs during their breaks, before and after meal time, and during their pre-sleep time. Officially, the SAREX hardware was to fly in Configuration B, which is voice only, battery operation. However, power conservation measures have been successful to date and mission control advised the SAREX team and the astronauts to initiate use of the Packet Radio system (Configuration C), which has been reported active. (Do not be surprised if you see "STS-83" in its beacon.) Edward Chuang, BV1AF, reports hearing the STS-94 packet signal Thursday, July 10, at 0057 UTC from his QTH in the northeastern part of Taiwan, although he did not connect.

The SAREX Working Group has designated the following frequencies during this mission. FM voice downlink (worldwide): 145.55 MHz; FM voice uplink (except Europe): 144.91, 144.93, 144.95, 144.97, and 144.99 MHz; FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz; FM packet downlink: 145.55 MHz; FM packet uplink: 144.49 MHz.

Hams should avoid transmitting on the shuttle's downlink frequencies. The uplink is your transmitting frequency. The crew will not favor any uplink frequency, so your ability to communicate with SAREX will be the "luck of the draw." Transmit only when the shuttle is within range of your station, and when the shuttle's station is on-the-air. Columbia is scheduled to return to Earth on July 17.

QSLs go to ARRL EAD, STS-94 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information in your QSL or report: STS-94, date, time in UTC, frequency and mode (FM, voice or packet). You must also include a business-sized SASE.

Additional STS-94 mission information is available from NASA at the NASA Shuttle Web site, http://shuttle.nasa.gov.

[Thanks to Charlie Sufana, AJ9N; Tim Bosma, W6ISS; Pat Kilroy, WD8LAQ; Frank Bauer, KA3HDO; and Rosalie White, WA1STO, for their assistance in compiling these reports.--Ed]

QST NAMES NEW "YL NEWS" EDITOR

Diane Ortiz, K2DO, has been named as the new editor of QST's bimonthly "YL News" column.

Ms. Ortiz is an editorial manager and writer at Newsday, one of New York City and Long Island's largest daily newspapers. Her Amateur Radio writing credits include articles published in CQ VHF, CQ Contest and elsewhere. She is a member of the ARRL, YLRL, QCWA and FISTS.

Licensed in 1972 as WN2HML, Ms. Ortiz has embraced a broad range of interests from VHF contesting to public service activities. She is currently the ARRL Hudson Division Assistant Director in charge of publicity, an ARRL Public Information Officer, a Volunteer Examiner, and the secretary of the Long Island Mobile Amateur Radio Club. Ms. Ortiz is also involved in producing New York City's first live monthly cable TV show devoted to Amateur Radio.

The first "YL News" column under Diane Ortiz's byline is scheduled to appear in the October issue of QST. "I'm very excited at the opportunity to showcase the experiences, views and accomplishments of women Amateur Radio operators in QST's "YL News" column," Ms Ortiz stated. "It's a place where I hope everyone will want to look for news, ideas and information about women and ham radio."--Steve Ford, WB8IMY

DXCC APPROVES OPERATIONS

The ARRL DXCC Desk has received and approved documentation for the following operations:

3A/DJ7RJ, 3B8/DL6UAA, 3B8/EA3ELM, 3C5Z, 3D2UK, 3XY03A, 8Q7AF, 9H3VG, 9H3VH, 9H3WD, 9H3WM, 9K2/YO9HP, and 9U5T.

Also: BS7H, C50YL, C53HP, C93/JA6SJN, C93/JG6BKB, C93/JR6XIW, D25L, D2FIB, D68KS, ES1HR, ET3FB, HS9AL, J3X, J6/F5CCO, J75T, J77C, J77FT, J79BP, J79QA, J79RC, J79WP, PJ8DX,

Also: S07NY, SM5ENX/DU1, T32HA, TI*/AA8HV, TI/ON7ZM, TL8EJ, TN7A, TO5C, TT6FNU, TY1RY, V5/DK2WH, V5/W8UVZ, VK0IR, VK9FL, VK9PG, XT2GA, XZ1N, YV7/AH6OM, YV7/WH6DAG, Z2/SM0FIB, and ZK1JOO.

For more information, contact Bill Kennamer, K5FUV, bkennamer@arrl.org.

JOHN AVERY, VE9IW, SK

Maritimes Section Manager, John Avery, VE9IW, of Swan Creek, New Brunswick, Canada, passed away July 9, after battling cancer for several months. He was 67. Avery was retired from the Royal Canadian Corps of Signals and was a veteran of the Korean conflict. A ham for 36 years and section manager since 1993, Avery recently was named "Ham of the Year" by the Fredericton Amateur Radio Club. RAC Atlantic Region Director Bill Gillis, VE1WG, said that despite his illness, Avery frequently talked about plans to develop and expand RAC activities. "When he was able to travel he eagerly anticipated each flea market and hamfest," Gillis said. Mel Ellis, VE9KK, called Avery "a very active and dedicated ham who volunteered his time to many amateur clubs and organizations." His wife, Ethel, and six children (including son Jeffery, VA3JTA) survive. Services are July 14, 11 AM, at St Vincent De Paul Church, Oromocto, New Brunswick.--Wm. J. Gillis, VE1WG

JUSTIN BARTON, WA1ITZ, SK

Former Vermont Section Manager Justin Barton, WA1ITZ, of Randolph, Vermont, died July 10. He was 69. Barton recently stepped down as section manager for reasons of ill health. He was succeeded by Bernie Capron, N1NDN, of Northfield. Barton became Vermont SM in 1994. He was elected again in 1996. An effort last fall to recall him turned instead into a vote of confidence. The recall vote tally was 135 "yes" votes and 257 "no" votes. Barton was a driving force behind the establishment of the Vermont Amateur Radio Council. Upon learning of Barton's death, former ARRL New England Division Director Bill Burden, WB1BRE, had words of praise. "Justin gave it his all during his tenure. It was my pleasure to work with him on several projects, and I will miss Justin's wit and insight." Burden said Barton "believed in family first

and hobbies second." Services will be held Monday, July 14, 9 AM, at St Catherines Church, Norwood, Massachusetts.

IN BRIEF:

* This weekend on the radio: The IARU HF World Championship starts at 1200 UTC on Saturday, July 12. Remember to listen for IARU Headquarters station NU1AW, which will debut from Connecticut this weekend to hand out a IARU multiplier, and for W1AW/7, which will operate from the QTH of Rush Drake, W7RM, in Washington. All other headquarters stations of IARU member societies are also multipliers for this event. See how many you can collect! The complete rules are on page 100, April 1997 QST. Also on tap this weekend, the CQ WW VHF Contest and QRP ARCI Summer Homebrew Sprint. See July QST, page 97 for details.

* No ARRL Letter on July 18: The ARRL Letter will be on vacation July 18, 1997. Publication resumes with Vol 16, No 29, on July 25, 1997.

* FCC reminder: The FCC is warning companies that offer to modify scanning receivers (this includes many H-Ts with extended receive coverage) in order to receive cellular telephone frequencies that this activity prohibited by federal law and FCC rules. The FCC's reminder, issued July 10, noted that scanning receivers must be FCC-certified and incapable of "readily being altered by the user" to pick up the cellular bands. "The modification of scanners on a substantial scale to receive cellular frequencies will be considered to constitute manufacture of such equipment" in violation of federal law and FCC rules, the Public Notice said. "Entities engaged in such activity are cautioned to cease advertising and/or performing any such activity immediately."--FCC

* FCC consumer assistance line: The FCC's Consumer Assistance number in Gettysburg, 800-322-1117, is being discontinued. All calls now should go to the new, toll-free number, 888-CALL FCC (888-225-5322). For the time being, calls to 800-322-1117 will ring over to the new number after a little message that informs the caller of the change.

* Pathfinder mission engineer is WA6NVA: Gordon Wood, WA6NVA, of La Canada, California, credits ham radio for starting him on the path that led to his becoming the chief engineer for communications for the Pathfinder mission. Wood works at the Jet Propulsion Laboratory in Pasadena, California. The Pathfinder mission has, so far, been a spectacular success and popular with the public. Wood got into ham radio about 40 years ago, at age 12, when his father bought him an old shortwave radio at a thrift shop. An article July 4 in The Los Angeles Times quotes Wood as saying: "Mankind after all these years is reaching out from his own planet with little toys to snoop around and understand whatever else is out there in the universe." Previously, he worked on the Mariner, Viking and Voyager interplanetary missions. Pathfinder images and news are available at http://mars.sgi.com/, http://mpfwww.jpl.nasa.gov/, and http://dhcom.com/astronomy/pathfinder.htm.--thanks to Jeff Reinhardt, AA6JR

* Pathfinder frequency: If you're up for some real DXing, according to Phil Karn, KA9Q, the downlink frequency for the Mars Pathfinder it is 8.420 GHz. See his Mars Pathfinder X-band Downlink Link Budget page at http://people.qualcomm.com/karn/mpf_budget.html.

* Clarification--What is a leap second? A report in The ARRL Letter, Vol 16, No 26, oversimplified the reasons behind the so-called "leap second." A leap second is one second added to Coordinated Universal Time (UTC) to make UTC agree with astronomical time to within 0.9 second. UTC is based on the performance of atomic clocks. Astronomical time is based on the rate of rotation of the earth. Since atomic clocks are more stable than the rate at which the earth rotates, leap seconds are needed to keep the two time scales in agreement. The first leap second occurred on June 30, 1972. Although it is possible to have a negative leap second (a second removed from UTC), so far, all leap seconds have been positive (a second has been added to UTC). Based on what we know about Earth's rotation, it is unlikely that we will have a negative leap second in the foreseeable future.--National Institute of Standards and Technology

* USS Salem special event: Under sponsorship of the USS Salem Radio Club and the SNS Radio Club, K1USN will operate as a special event station from the USS Salem at Quincy, Massachusetts, from July 12, 1600 UTC, to July 13, 1800 UTC. Some former USS Salem radio ops will be on board for the event, and K1USN will use both the ship's equipment (on AM and CW) and modern gear. (This will mark the first time the ship's transmitters have been operated in many years.) Operation will be on SSB, CW, FM and RTTY, 80 through 2 meters. Frequencies include 3.860, 7.260, 14.260, and 18.160 MHz. QSL to Bob Callahan, WA1QWT, 56 Acorn St, Scituate, MA 02066.

* Island to be activated for IOTA event: West Island Amateur Radio Club of Montreal will activate Whitehead Island (NA-014)--a small island in the Bay of Fundy between Nova Scotia and New Brunswick, Canada, for the IOTA contest. Operation will begin Saturday, July 26 and continue through the IOTA contest until July 30. The special call sign XJ9GM will be used to commemorate the 25th anniversary of the Grand Manan Elementary School, where the radio operation will be set up. Look for XJ9GM around 1.835, 3.510, 3.795, 7.050, 7.250, 10.110, 14.040, 14.195, 18.080, 18.120, 21.040 and 21.320 MHz. QSL to the West Island Amateur Radio Club Inc, Box 884, Pte Claire/Dorval, Quebec H9R 4Z6. For more information, contact Fred Archibald, VE2SEI, 130 Embleton Crescent, Pte Claire, Quebec H9R 3N2 Canada; tel 514-694-3441; fax 514-630-4134; e-mail archibal@pubnix.net.--Fred Archibald, VE2SEI

* Ham-pilot credited with saving lives: Pilot Leonard Westbo, W7MCU, of Kent, Washington, was credited with saving the lives of his three passengers after his small plane crashed and broke up in a glacier canyon in British Columbia in late June. One man received a fractured vertebra, but the others were not seriously hurt. Westbo was able to use the plane's radio to transmit its location to rescuers. The four were on a fishing trip when the plane went down after its engine apparently failed.--Harry Lewis, W7JWJ, WWA Section Manager

* N7MBA is new Premier VP of Sales: Jim Newcomb, N7MBA, has been named vice president of sales for ADI/Premier Communications. Newcomb, who has 15 years experience in the ham radio industry, previously was national sales manager for ICOM America. At Premier, he'll oversee all day-to-day operations and will be responsible for sales. For more information, call ADI/Premier at 800-666-2654.

* Former Hudson Director recovering from surgery: Best wishes to former ARRL Hudson Division Director Richard Sandell, WK6R, who's making a speedy recovery from laparoscopic surgery July to remove his gall bladder.--Stephan Anderman, WA3RKB

* Two hams among honored broadcasters: Martin Vodovoz, WA7TYY, and Steve Scott, KD8S, were among several Society of Broadcast Engineers members inducted into the Nevada Broadcasters Association Hall of Fame on June 13. The event honored broadcasters with 20 or more years of experience. Vodovoz is chief engineer at KLVX-TV; Scott is a maintenance engineer at KUPN. Also inducted were John Holland and Tom Cross of KVBC, and Doug Kramer and Jack Wilkinson of KLAS.--Steve Scott, KD8S

* New WIA VK3 QSL bureau: The new address for the Wireless Institute of Australia's VK3 QSL Bureau is WIA Victoria, Inwards QSL Bureau, 40G Victory Blvd, Ashburton, Victoria 3147 Australia. The current VK3 bureau address will be discontinued after December 31, 1997.--WIA

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

* Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
* Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

801. CABLE TV--FREE DECODER PLANS--

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-11 00:00:00 UTC
From: Edward Witt <superted@worldnet.att.net>
Message-ID: <01bc8e48$270bb740$537074cf@default>
Source record: 193811

Now you can get new plans to build a Cable Descrambler System, US and UK plans.

This is not the origonal Radio Shack plan (now obsolete), but a choice of six new up to date plans designed to work on any cable box in any area. Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area, and you will be able to view all premium and pay per view channels.

It works on all Cable Tv Systems. The parts to make the box cost appoximately $15 (depending on the plan) and you can find them at any local electronic part supplier(US Residents will be supplied with radio shack part numbers). British Sky Cable descrablers cost approx 20 Pounds. Remember this is for educational purposes only, you still have to pay for the channels you view. I have to say that to protect myself for any liablity.

For the Plans just send $ 2 or 2 Pounds to:

Ed Hacker
409 Adams Street # 7
Hoboken, NJ 07030
USA

The reason I charge two dollars is for the stamp, envelop, and paper your plans are on. I am doing this for you not for me to make money. Lets get real you cant buy much for two bucks. I am not in this for the money but to get back at the cable companys that over charge people.

CABLE HANDBOOK (Additional $2)

Everything you ever wanted to know about cable boxes. Includes a cross reference list for upgrading your box using upgrade converts, cubes, plug-in activators and service code-generators. Also explains general cable operation, this handbook is very COMPLETE, a must have!

TURN ME ON!

Turn on all your premium channels with nothing to buy.

The Notch Filter

A notch filter allows you to selectively descramble channels. For instance, if HBO is on channel 7 and Cinemax is on channel 14 or pay-per-view is on 22, you may build a notch filter to descramble each of those channels. This method is fairly simple to build; However, it requires several more parts than the Fifteen Dollar Box. This system will work on your cable system, no matter what frequency your cable system operates on. A cable box is NOT

REQUIRED, and parts cost in the range of $25-30 depending on how many channels pay channels you wish to descramble. NOTE: I used channel 7,14 and 22 as an example. Your premium services may be on other channels and the notch filter can be built for whatever channel your premium services are on. (between the range of 2-22) Parts can be purchased from a electronics wholesaler/retailer in your phone.

The Gated Sync is the Grand Daddy of descramblers (in band and out band). It can be configured to operate on your cable systems frequency. This system is for the serious home electronics buff. It is a bit more complex to build; However, it sells for a lot of money. And, it will descramble EVERY channel.

SSAVI was created by Zenith, and used by many Zenith converters. The system is very difficult to build, but it will descramble EVERY channel, and also sells for a lot of money. Novices should not attempt to build the SSAVI system.

FREQUENTLY ASKED QUESTIONS

What is a Descrambler?

A descrambler is a device that restores the picture and sound of a scrambled channel. In most cases, ALL channels which are scrambled will be restored.

Are Descramblers legal?

YES! It is legal to build, sell, ship, use, and own a descrambler; However, when you use a descrambler, it is your responsibility to notify the cable company that you are accessing their signal.

Do I need a converter from my cable company?

In most cases NO. A cable ready VCR or TV will work.

Is it difficult to build a descrambler?

Turn me on, the Fifteen Dollar Box, the Oak converter and the Foil method are very simple methods! The instructions provide step by step instructions. No special skill or knowledge are needed. The Notch filter is still fairly simple. The Gated Sync is not for the beginner, it requires electronics knowledge.

Can I build more than one?

YES! You may build as many descramblers as you want! They are legal to sell and demand fairly high prices!

Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area
For the Plans just send $ 2 or 2 Pounds to:

Nice quoting,you snipped the mars part entirely. South and west on cw? Are you afraid someone on hf in the states will give your pisswater signal a 3/2? I'd watch that shell at the university,they're keeping an eye on your cheapskate ass. Can't even afford legal internet access,have to route it through a shell. Enjoy it while you can. And you sure like to didge that marriage question,let's check something...1/4/54,Perry University of Guam...that's interesting.Why are you single and living in Guam? That's a nasty place. I'll get back with you later,I'm going to make you my project boy.

Do as I did, Hans: Call the FCC and pose the scenario to them. They
seem to think we're well within the law to transmit over unauthorized
communication.

805. SWARM Software DEMO for Radio Communicators

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-11 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <5q67ie$3ur2@mars.online.uleth.ca>
Source record: 193815
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.swap

A N N O U N C I N G

SWARM - Solar Warning and Realtime Monitor

NEW Version 1.2

Critical Software for Radio Communicators

(DEMO VERSION AVAILABLE AT: http://solar.uleth.ca/solar/www/swarm-demo.html)
(OR VIA ANONYMOUS FTP AT: "solar.uleth.ca" in the dir. "/pub/solar/Demo")

THE DEMO IS A FULLY-FUNCTIONAL VERSION!
TRY IT OUT!

We are proud to announce the release of Version 1.2 of SWARM, our Solar Warning And Realtime Monitor software for Windows 95 and Windows NT computer systems!

SWARM Version 1.2 differs from earlier versions in the following respects:

* SWARM now processes data from 25 magnetic observatories world-wide instead of only 11.

* SWARM can now fetch virtually every type of daily, weekly and monthly report in existence and archive them for future reference. In all, 19 types of reports can be fetched, displayed or printed. Data sources for these reports include the Space Environment Center, the Solar Terrestrial Dispatch, the United States Air Force and IPS Radio and Space Services in Australia. You will never thirst for information again!

The List of Retrievable and Schedulable Reports Include:
1. STD Daily Summary of Solar & Geophysical Activity.
2. STD Ground-Based Auroral Activity Sightings.
3. STD Daily Auroral Activity Forecast.
4. STD Weekly Solar Terrestrial Forecast and Review.
5. STD Daily Ionospheric Data Report.
6. STD Daily WIND Spacecraft Data Report.
7. USAF/NOAA Report of Solar & Geophysical Activity.
8. USAF/NOAA Energetic Solar & Geophysical Activity Report.
9. USAF/NOAA Solar Coronal Disturbance Report.
10. USAF/NOAA Solar Region Summary Report.

11. USAF/NOAA Solar Disk and Limb Activity Report.
12. USAF/NOAA 45-Day Ap and Solar Flux Forecast.
13. USAF/NOAA HF Radio Propagation Reports.
14. USAF/NOAA Weekly Highlights of Activity.
15. IPS Daily Solar and Geophysical Report.
16. IPS Weekly Solar and Geophysical Report.
17. IPS Monthly Solar and Geophysical Report.
18. IPS Weekly Geophysical Report.
19. IPS Weekly HF Propagation Report.

* You can schedule up to 100 Fetching Events. A "fetching event" is the physical act of connecting to a remote machine and fetching information from it. The flexible scheduling system in Version 1.2 of SWARM allows you to schedule the retrieval of any or all of the supported reports (any or all 19 of them). You tell it the hour and minute to fetch the material, and SWARM will fetch it independently of the normal realtime data-gathering activities that occurs.

* SWARM will also let you schedule in fetching events for obtaining old solar WIND spacecraft data (SWE or MFI data), or for obtaining National Solar Observatory Emission Line Coronal Photometer data (the full-disk maps of coronal intensities at Fe XIV and Ca XV wavelengths). Again, it's all independent of the main realtime data retrieval activity.

* SWARM will now plot current solar flux and sunspot numbers and includes facilities to smooth the plots for almost any time interval desired. This will be an extremely useful tool for aiding Radio Communicators and for determining recurrent periods of solar activity as we continue to rise toward a solar maximum over the next 2.5 to 3 years.

* SWARM can plot a completely new graph known as an "Aurora Power Level Plot". It computes the estimated power (in gigawatts) that is input into the upper atmosphere of the Earth from the solar wind. It uses data from the solar WIND spacecraft. This results in one of the most definitive and accurate indicators of auroral activity currently available.

* SWARM will also display current ground-based sightings of auroral activity from our network of over 2,000 sites.

* SWARM has been considerably expanded to track on a gridded sphere of the Sun not only solar sunspot regions and coronal holes, but ALSO:

x Active Surge Regions
x Active Prominence Regions
x Mound Prominences
x Eruptive Prominences
x Loop Prominence Systems
x Sprays (violent ejections of mass)
x Arch Filament Systems (a good indicator of sunspot growth)
x Active Dark Filaments
x Disappearing Solar Filaments (eruptive and non-eruptive)

x Dark Surges on the Disk
x Bright Surges on the Disk
x Coronal Rain
x Cap Prominences

This list represents practically every known type of visible phenomenon. SWARM will simulate on-screen the locations, shapes, sizes and statistics of each of these types of phenomena. You will never lack for information on solar activity. Even during the quiet periods, there are features and activity that is observed that never makes its way onto the daily reports.

* SWARM now contains an Options section which will let you set your e-mail address and other parameters which previously had to be set using an external text editor on the initialization file "SWARM.INI". Everything you need to set can now be set from within SWARM. Life just got easier.

* Version 1.2 of SWARM D O U B L E S the number of retrievable solar images. You can now obtain solar imagery from Big Bear Solar Observatory and Learmonth Solar Observatory - as well as all of the others: NSO, SOHO, POLAR, Mauna Loa, etc.

* You can now use SWARM to view the last solar images you pulled down. Previously, SWARM only loaded your favorite image viewing software immediately after it finished retrieving them from the Internet. Now, you can view the images you retrieved anytime you want by simply clicking on the image desired and activating the image viewer with another click of your mouse button.

* SWARM will now retrieve both LARGE-scale and/or SMALL-scale movies.

* A new type of movie SWARM will retrieve is the SOHO EIT movies from the extreme ultraviolet imaging telescope.

* SWARM's main menu has been reworked to provide a more natural and less confusing interface.

* ALL OF THE OTHER FEATURES OF SWARM HAVE BEEN RETAINED, INCLUDING THE REALTIME RETRIEVAL OF:

x Solar X-rays (1-8A and 0.5 to 4.0A bands)
x Protons (>1, 5, 10, 30, 50, and 100 MeV)
x Electrons (>0.6, 2.0 and 4.0 MeV)
x Geosynchronous Magnetometer Data (all components)
x Solar WIND Spacecraft Data
x Geomagnetic A and K-indices
x Solar Flux and Sunspot number values
x Solar Sunspot Region and Coronal Hole Data
x MUCH MORE...

For complete details and pricing information, please refer to the SWARM web-page at: http://solar.uleth.ca/solar/www/swarm.html. OR, you can download a fully-functional demonstration version of SWARM (see the header of

this message for details).

806. LOOKING for FM TRANSMITTER , Kinematix "IMP II"

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-11 00:00:00 UTC
From: mark russo <mrusso@hoflink.comNO.JUNKMAIL>
Message-ID: <33C6E91D.605A@hoflink.comNO.JUNKMAIL>
Source record: 193816
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello to all.
I'm looking for this little tunable FM transmitter (87-108 MHz)that
was made in the late 1960's by Kinematix, model number "IMP II".
It's 3 x 1-1/8 x 2-3/4 in size.
It's black and has a slide power switch on the front.
A microphone could also be plugged into the top. It was tuned
with a plastic tuning tool. This gem is in the 1967 Lafayette
Radio catalog for $39.95.
Does anyone out there have one of these at the bottom of a draw?
If so, and if it's in working order I'd like to buy it from you.
Let me know how much you want for it.
Please e-mail me direct at: mrusso@hoflink.com
THANKS, Mark N2FLF

NOTE If you want to E-mail me, you MUST REMOVE the NO.JUNKMAIL
in my address. It should read: mrusso@hoflink.com I'm trying to stop
the unwanted Junk Mail. SORRY for the inconvenience but it's getting
out of hand.

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

Art,

Excuse me for saying so...but you are an idiot...and so are the couple of
others who don't know what the hell they are talking about. FCC rules are
not governed by emotions nor opinions as so many usenet lawyers seem to
believe.

Read 97.101(d) very closely and tell me where it says anything about legal
or illegal transmissions. Then tell me what part of "...cause
interference to ANY radio communications or signal." you don't understand.
Please prove me wrong Art. I will respect you when you do.

Please forgive me if these are the wrong newsgroups to post to.

I�m currently helping a neurosurgeon to do some research on nerve stimulators to help restore some functions for people paralysed with spinal cord injuries.
So as not having to implant a power source (ie. Batteries) into the human body, we decide to instead use an external transmitter to send signals using an RF carrier (5-20Mhz) to an implanted receiver in the spine (specifically the lower back).
Being trained as a radar technician, I have some ideas of RF propagation with air being a medium. So what are the cionsiderations if the human body is used as a medium? How does the various dfferent tissues of the human body affects it?

You can e-mail me, but I�ll also be checking here frequently for your thoughts/theories.

Thanks in advance for any advice.

813. The ARRL will live forever

Newsgroup: rec.radio.amateur.misc

From: Burt Fisher <burt1@rocketmail.com>
Message-ID: <33C7027E.51B1C460@rocketmail.com>
Source record: 193823

Hams do not have the guts to stand up to a 5 year old much less the
ARRL.
At the ARRL the employees for the most part kiss the ass of Dave Sumner
so deeply their teeth turn dark.
And the members fall at the feet of anyone who is connected with the
ARRL.
And then there is Rick Palm who never has to use tissue because he
is licked clean.
These comments may be crude but they are only words, what the ARRL has
done
to some employees is the real crud.

Don't rule out HTs. You can carry them nearly anywhere. I use my
HTX-202 successfully in my car, and I can work plenty of simplex
stations 20+ miles away with no booster and a quarter-wave whip
INSIDE the car. It would be easy to add a booster and real antenna
and play with the big boys. An HT is a cinch to take out of the car for
security purposes (try lugging your mobile around the grocery store).

A mobile is supreme when you're in your car, but remember, you
can't take it with you without some fuss, much less us it without
having to be inventive (some folks enjoy a challenge, I know).

I find it's a good idea to have the service manuals for all such
equipment. It's a good first step to being sure about where you
are poking. It's saved me alot of damaged radios that could easily
have been futher destroyed by me. Hope that helps.

Try looking at this web site : http://www.esdi.com/log-it

I have a complete Logging Software Package (Log-It v5.0) that you may

download for FREE !

Its a fully functional program with everything the average ham is looking

for. Runs in DOS or WINDOWS. Give it a try. The website has lots of other

neat stuff too ! Like links, shareware downloads, and more.

Try the CHAT SHACK while you are there. Get some friends together

and keep in touch when the bands are down or anytime !

Take a few moments to complete the SURVEY/QUESTIONAIRE ... we like to

know what is on your mind and how to improve the website/software.

Take a look ! Thanks ... Jim

> The transmitted carrier frequencies are between 1-20 Mhz.

I'm not sure what you mean "putting it thru' a metal bowl", but
if you are simply referring to a parabolic reflector, the material
won't be a problem at those frequencies. In fact, you could use
chicken wire just fine. The real problem is going to be size.
A typical parabolic reflector is on the order of wavelengths in
diameter. Even at 20 MHz, you would want a "bowl" that was 10 to
20 meters or more in diameter. Are you serious about building
such a device?

What exactly is it you are trying to accomplish? Simply to
get directivity, at those frequencies an antenna with parasitic
elements and a reflector such as a Yagi or Quad antenna would
be much more practical.

73,
Todd

If this is the case,any Tech or Tech+ can operate ANY HF band,as long as the control op of the remote base is an Extra.
I wonder why the control op,who is Extra class,of a local 'members only' linked repeater system,which consists of 70cm,1.25m,2m,6m and 10m thru 160m,only allows HF access to members who hold General or above tickets.....Maybe he interprets part 97 differently:<)

Special Bulletin 17 ARLX017
From ARRL Headquarters
Newington CT July 11, 1997
To all radio amateurs

SB SPCL ARL ARLX017
ARLX017 Justin Barton, WA1ITZ, SK

Former Vermont Section Manager Justin Barton, WA1ITZ, of Randolph, Vermont, died July 10. He was 69. Barton recently stepped down as section manager for reasons of ill health. He was succeeded by Bernie Capron, N1NDN, of Northfield.

Barton became Vermont SM in 1994. He was elected again in 1996. An effort last fall to recall him turned instead into a vote of confidence. The recall vote tally was 135 ''yes'' votes and 257 ''no'' votes. Barton was a driving force behind the establishment of the Vermont Amateur Radio Council.

Upon learning of Barton's death, former ARRL New England Division Director Bill Burden, WB1BRE, had words of praise. ''Justin gave it his all during his tenure. It was my pleasure to work with him on several projects, and I will miss Justin's wit and insight.'' Burden said Barton ''believed in family first and hobbies second.''

Services will be held Monday, July 14, 9 AM, at St Catherines Church, Norwood, Massachusetts.

Hi, Kevin.

I read recently (Perhaps in the latest QST magazine) about a special
tool for separating Rohn tower sections, but I don't remember that much
about it. Perhaps someone else will offer more info about it. Good luck.

The new Digital TV modulation methods will look like broadband noise on
a spectrum analyzer. If is is cable leakage and if they have added some
digital channels, you should be able to see the noise in 6 MHz chunks.
Since you have acces to a spectrum analyzer (SA), I suggest hooking it
up to a cable drop in the area and checking for any noise like signal in
your frequency range.

The 440 band is shared with radio loaction services. We used to get
"radar" interfernece that would sound like a buzz for a second or two

reapeating every 8 seconds or so. Perhaps there is a new radio location system.

Yuo might post your question on the listserver that discusses land mobile radio. It is called something like LMR.

Good luck.
Let us know what you find.

>has to post before this group speaks Up?

Look at little jimmy. See jimmy be scared! Every post he makes now, he trys to comply to the letter of "the rules" vis-a-vis he has a radio for sale. Little jimmy used to analyze people's "balls" for that sort of behavior before. But the big bully is crying to mommy (the ISPs) that he is being picked on because he's pretty worried that all of the threats he has made in the past will come back to haunt him. But they were all OK because he was being "picked on." This is a third grade bully-on-the-playground mentality at work here!

And jimmy - let me clue you in on something: the reason "the group" isn't speaking up is that NO ONE HERE LIKES YOU. In fact, their dislike of you is palpable.

ISPs
>have similar standards for Spam but none of them match your definition.

A most excellent post, Glen. One thing I might humbly add is while Mr. O'Brian keeps referring to some of us as "anon spammers," the correct terminology for me would be a "troll." And, while Mr. O'Brian is certainly enamored of the term, my posts are certainly not "spam." I have on occasion heard such posts referred to ingloriously as "troll droppings."

I most heartily applaude your dedication, Glen, to assuring the terminology on usenet groups be as correct as possible to ensure at least a modicum of civility.

And to little jimmy: the reason there is no big movement in "the group" to come protect and defend you is simple: NO ONE LIKES YOU.

Look at little jimmy. See how the big bad playground bully is changing. See how his language is getting better. See how he is trying to "comply" with "the rules." See how he has dropped his constant analysis of other guy's "balls." He still is obsessed with homosexuality, though. Hmmmmm.

Now all of you big bad people out there, quit picking on little jimmy. He is a but mere shadow of his former self. And a shadow is all he ever was...

Make MONEY...
The fact that so many people have taken the time to post to 250 newsgroups or more should convince you that this one REALLY works!!!!! Look at this man's story, then the rest of the original:

I thought, what the heck, I'll try it. It's only six dollars. I didn't do it right at first, I only sent out to about 30 newsgroups. But, I got back my six dollars and actually made $159.37 in a week (someone put some change in the envelope). Anyway, now I'm going to do this the right way; send out to 250 newsgroups! The rest of this letter is just a cut and paste from the original. All I can say is that it works. I would never have believed it if it didn't happen to me. Just remember, we must all follow the rules. Be HONEST and FAIR and you will make money! Sure is a lot of mail though!

Thanks for reading!
C.L.
^^
MAKE A FORTUNE - AND THIS IS THE ABSOLUTE TRUTH!

IF YOU HAVE READ THIS FAR YOU HAVE ALREADY PROVED IT WORKS!!

Take just 5 minutes to read this and see.

This is the newest updated version.

As I was surfing the net, I read all these postings on how you can make over $50,000, even $800,000.
Well I believe that if all goes well, and you follow the rules EXACTLY,it will work. Just follow the
instructions given in this letter, and you to can make over $800,000,perfectly legally according to USA
Post Office Laws (read on for specifics). Don't look at this as a money-making scam, but rather a true-to-
life example to test the above statement. It will only cost you $6 dollars plus 6 stamps, and a few hours of
your time. Thus, there is some effort involved, because nothing in life is absolutely free. Are you ready
and willing to accept that you deserve to receive a fair amount of money?
If so, please continue reading.
But if you think this is just another scam, I suggest that you don't try it.

PLEASE NOTE: THIS IS A 6-PERSON LIST, NOT THE USUAL 5. PLEASE DO NOT TRY TO CHEAT THIS PROGRAM. JUST ADD ONE NAME AND REPOST THE ARTICLE. IF YOU DO NOT IT WILL NOT WORK, AND YOU WILL BE REMOVED. FROM THE LIST! FOLLOW THESE DIRECTIONS AND JOIN US IN A GREAT OPPORTUNITY!

The program has been revised and you will notice six names instead of five. The reason for this is the
flood of five name programs and the sixth name will add $50000 to $100000. This is proven mathematically and in my bank account. I never really thought that this program would work, but IT DOES and it will for you too.
Just be patient and follow the directions exactly. Print this article now, so you have all the information for your version. Remember to keep the names right. Let's go!

STEP 1

Invest your $6 by writing your name and address on six separate pieces of paper along with the words:
"PLEASE ADD ME TO YOUR MAILING LIST".
(In this way, you are not just sending a dollar to someone; you are paying for a legitimate service.)

People have asked me if this is really legal. It is! You are using the Internet to advertise your business. What is that business? You are assembling a mailing list of people who are interested in home based computer and on-line businesses and methods of generating income at home.
Remember - people send you a small fee to be added to your list. It is legal. What will you do with your list of thousands of names? That's up to you, but this is how it becomes legal. To be legal you must actually sell a product or service if you expect to receive a dollar. Anyone sending a dollar back to you must receive something in return. You have already received this letter due to the participation of each of the 6 persons listed below. This letter and the plan given within this letter are a "product" that you have received. Thus, you will be sending $1.00 to each
of the 6 persons given below in exchange for receiving this letter and for asking them to provide the "service" of adding you to their mailing list.

THIS IS A SERVICE AND IS A 100% LEGAL BUSINESS OPPORTUNITY WHICH I COVERED IN TITLE 18, SECTION 1302 AND 1342 OF THE POSTAL AND LOTTERY LAWS.

Now, please follow the given steps exactly to receive your desired amount of money:
Immediately send $1 US cash (a one dollar bill, no checks, no money orders) to each of the 6 people on the list below. Wrap this dollar in a note with the words: "Please add me to your mailing list." (In this way, you're not just sending a dollar to someone, you're paying for a legitimate service.) Also, to discourage those who prey on cash in the mail, be sure the bill is completely hidden by the note. A woven envelope is recommended. Include your address. You do not need to include your name. This is the key to the program! Also, let each person know what number they are in your letter so he/she knows which cycle he is receiving the $1.00 from. Make sure that you retain EVERY name and address sent to you, either on computer or hard copy, but do not discard the names and notes that people send to you. This is PROOF that you are truly providing a service, and should the IRS or some other government agency question you, you can provide them with this proof.
Therefore, you will start a list of all the people who send you a dollar requesting to be added to a mailing list. Actually, you will want to safeguard this list because it can generate even better responses and much

more money later! Fold a $1 bill inside each paper, and mail them by standard mail to the following six addresses:

1) Rudolfs Osins
Aspazijas 37-4
Jelgava, LV 3001
Latvia
2) J. DiMauro
89 East Squire Dr. Apt. 1
Rochester, NY 14623
USA
3) D. Fenter
24 Hornsilver Place
The Woodlands, TX 77381
USA
4) R. LAWSON
P.O. BOX 842
BRISTOL,VA.
24203-0842
USA
5) V. Jelenic
Branimirova 09
Zagreb
Croatia, Europe
6) Marko Korica
Milana resetara 38
ZAGREB
CROATIA

STEP 2

Now remove the top name from the list, and move the other names up. This way #6 becomes #5 and so on. Put your name in as the #6 on the list (Remember to take #1 off and change the numbers so #2 becomes #1, #3 becomes #2, #4 becomes #3, #5 becomes #4 and #6 becomes #5 and you become #6.)

STEP 3

LET ME TELL YOU HOW MUCH MONEY YOU CAN MAKE.

How do the numbers work for potential income earnings? Assume for the sake of example that you get a 7.5% return rate. This is very conservative;my first attempt was about 9.5%, and my second was over 11%.
1. You send out 200 letters, and 15 people (7.5% x 200) will send you $1 each. $15.00
2. Those 15 send out 200 letters each, and 225 people send you $1 each. $225.00
3. Those 225 send out 200 letters each, and 3,375 people send you $1 each. $3,375.00.
4. Those 3,375 send out 200 letters each, and 50,625.00 people send you $1 each. $50,625.00
5. Those 50,625 send out 200 letters each, and 759,375 people send you $1

each. $759,375.00
6. Those 759,375 send out 200 letters each, and 11,390,625 people send you
$1 each. $11,390,625

TOTAL $12,204,240.00!! That's 12 million dollars. If those figures sound
incredibly high, figure
that even with half the return rate, or even a quarter, the total is still
spectacular. It works every time, but how well will depend on how many letters
you send. In the above example you mailed out 200 letters. This sounds like
"pie in the sky," but the numbers add up, and with over 40 million people on
the NET, it works! TIP: For an even greater return,post to MORE than 250
newsgroups initially; try for 300-350. When your name drops off a list, simply
access another message from a newsgroup and
start the process over again. Post the new article to at least 250 newsgroups.
remember, the more you post, the more people see, and the more
you get. There are at least 25,000 newsgroups at any one time. This is a
$7.92 investment. It takes about a week or so to start seeing a return-

Well Greg, I understand how you feel, however, it's a two way street.
To have
a store with no "retaped" or returned merchandise would mean a strict no
return policy.
What are we supposed to do with stuff people buy and for no reason other
than they
decide they don't like or need it return it for full refund? Please be
carefull with how
broad a brush you paint Radio Shack stores or employees. There are
aprox 1700 privately
owned RS stores like mine. Everything in my store had to be bought and
paid for so when
you return something I have to either take a loss or try and sell it.
Should I have to lose
money because you change your mind? I try to help each and every
customer make an
informed buying decision but sometimes things just don't work the way
you expect, so my
return policy is quite liberal. I used to work at R & L electronics and
their return policy is
simply "you return it, expect to pay a 15% restocking fee" then the
unit gets sold as a
"demo" at 5 to 10 % off. Bottom line is, I try to make it as fair as
possible for everyone
concerned, including me, I can't stay in business if I lose money
everytime someone changes

their mind.

Tell you what, you cite where 47 U.S.C.F.R Part 97 states that interfering

with any communication, including unlawful communications is unlawful, and
I'll provide facts. Otherwise, the quote of your material above seems to
apply just as much to you as to the folks to whom you're responding.

>me.
>
> Steve Carlisle VE7AHL

IF and I emphasize the word *IF* the above story is anywhere near
true , I would suspect what the person in question was listening to

was an image frequency of a cell phone conversation that was taking place in the authorized cell phone band. I was at Radio Shack once and the salesman was demonstrating the frequency range of a scanner to a customer when we started hearing a quite titillating (guy-gal ;)) conversation on cell phone. Neither the customer nor the salesman could explain it until I butted in and told them it was an image frequency from the cellular phone band. FWIW if you'll check the newsgroups alt.radio.scanner and rec.radio.scanner you'll see that some who like to listen to cell phone conversations have made a science out of determining their scanners IF(s) and listening to the image frequency which is the cell freq + the IF.

For lots and lots and lots of good information on 3-500Z
amplifiers (and tubes) visit the website run by Rich
Measures, AG6K ... I don't have it bookmarked, but you can
easily find it thru any of the search engines (Yahoo, etc).

In article <33C46065.2D48@bellsouth.net>,
>
>What a hypocrite.

VERY GOOD, James! You were finally able to send a note without using
any four-letter words. We're making great progress.

Now, let's analyze what you wrote. Have you ever heard the expression
"The pot calling the kettle black"? Think about what that means, in
regard to your off-topic posts on .dx, .boatanchors, .misc, .policy,
and .swap.

I've tried to remain on-topic with you, asking what radio expertise
you can share with us (no response), what radio-related gear you've
built (no response), what homebrew rigs you're operating on the air
(no response). Let me pose some more radio-related queries: Tell us
your experiences with ducting on 160m, gray-line propagation, LDEs,
and anything else you'd feel would be of interest.

Now, I suggest you tatoo what's included below on the backs of both
hands, so everytime you're at your keyboard you'll see these priceless
words of wisdom:

>Hi Hank and Glen - You both misunderstand the situation. With well over
>20 kilogroups on Usenet, any topic you can possibly cook up would be on-topic
>*somewhere*. Antenna discussions are discouraged on .misc becaue there is
>a NG (r.r.a.antenna) devoted to them; home-building discussions are dis-
>couraged on .misc because there is a NG devoted to them. When we ask
>folks to move off .misc it is not because we're tryng to silence or censor
>them; rather, we're asking them to move to a more appropriate NG. If they
>don't comply then it's appropriate to gently request their provider to
>ask the user to abide by the charter.
>
>If all 200,000+ of us decided to ignore the charter and post off-topic
>remarks, this NG would be unreadable. Is that type of anarchy what you
>truly desire? Would you quietly sit by and kill-file 200,000+ posters?

You might also want to contact your local fcc district office. Maybe
they have had other such complaints. Our department of radio, in
canada, has told us they are also interested in interference
complaints as it might help strengthen the case against a repeat
offender.

853. Anti-ARRL subversive tactics?

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-11 00:00:00 UTC
From: w1_k_sorter@qsl.net
Message-ID: <5q5c6p$ean@news2.tds.net>
Source record: 193890

Hey,

I've recently become convinced that the ARRL has got to go. IMHO, the loss of 2 metrs and 432 would be a small price to pay for ridding us of their crap. It's a long story hi hi.

Basically, I DO NOT wish to stand and be counted with the Glen's and the Burt's-at this time, I'm not sure that they are any better than the common enemy....

I fully realize that $$ runs the ARRL and that $$ will bring them down.

Towards that end, I'm wondering what the most effective tactics are regarding covert passive resistance? What can I do that will cost them $$ (without spending any $$ out of my own pocket)?

Is there an anti-ARRL underground?

Any replies would be very much appreciated-for me, the war is just starting (after being a life member for 20 years).

Thanks de K.

Howdy Steve -- check the Manual Vendors page links at URL:
http://pw2.netcom.com/~ac6v/pageaae.html
You will find Tempo one Manuals there.

893. Pentium computer with modem $395

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-12 00:00:00 UTC
From: Burt Fisher <burt1@rocketmail.com>
Message-ID: <33C852FD.D43476FA@rocketmail.com>
Source record: 193731

```
Pentium Computer
All new except as indicated

-Intel Pentium 60 MHZ
-PCI Bus,Vesa Local Bus and ISA bus motherboard.
-Three ISA slots, Four PCI slots.
-8 MB memory on 72 pin SIMMS with four more empty SIMMS slots.
-256K high speed cache.
-Video-57P Graphics and motion video accelerator card with 1M VRAM

-Mini tower case. 104 keyboard. CE AK-77 mouse

-DCS S611 sound card and stereo speakers

-Supra 28.8 Kbps fax modem Setup with Netscape Communicator 4.0

-Hard drive is compressed to 250M loaded with Windows 95, Microsoft
Works for Windows and more.

-Documentation and drivers included for motherboard, modem, mouse,
and video card.

Price $395

Let's not be so hasty.....

Cheap scanners have lousey image rejection. It IS VERY POSSIBLE that a
scanner tuned to a HAM freq will inadvertantly receive a cell phone Tx.

There is a similar post ahead of you on this same subject.
According to the responce the amateurs can transmit on top of them
causing them intereference as they are not authorized to transmit on
10 meters.

897. REQ: INFO ON HAM LICENSES (CANADA)

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-12 00:00:00 UTC
From: Greg Dell'Agnese <gdell@geocities.com>
Message-ID: <33C82E5B.DE27C75D@geocities.com>
Source record: 193735

I would like information on how to get a license in Canada plus the cost of doing the test and the cost of a call sign and all that information for a person who wants to join in on all the action... I know I have a good chance in passing the test 'cause I have a high school OAC (GRADE 13 for all you people outside ontario) in electronics plus a computer technical OAC and I know a bit of morse code.

Any info anyone can give would be helpful.

Thanks,
Greg Dell'Agnese

is this a lambda and rainbow forum here? this faggot was in the closet
flaming the newsgroups,then got "discovered". as long as he keeps his
mouth off my penis he's fine! now get your left winged feminazi ass out
of here. and welcome to ham radio. now get your aclu ass back to the fag
channel
```

It won't get you into trouble, the FCC has stated that they do not consider amateurs to be breaking the law by interfering with these unauthorized stations, and they don't care what we do to keep them off the amateur bands.

Well, I received the same respones from one of the monitoring stations.
It is correct that part 97 states that it is unlawful to cause
intentional interference to another transmission, but since the FCC made
the rule, they can also choose the not enforce the rule under certain
conditions, which is what they are doing in this case.

Hello!

How would you like a Software Disk that creates Thousand of LEADS for your Primary focus program and Tons of CASH in your mailbox all at the same time?

This powerful Software System is going through ALL of the MLM companies like nothing before. This is because it doesn't compete
with anyone's primary program...it enhances and compliments it!

If you decide to participate, you will never have to scratch around for someone to present your MLM program to again. You will have THOUSANDS of LEADS as a result of using this Software System. And the Big added Bonus is that you will also have CASH in your mailbox EVERY DAY, because Each of the Thousands of Qualified Leads generated by this Software System PAYS YOU $20 each to send them the info about your Networking program. Do the math...it will blow you away and keep you awake tonight!

This is NOT MLM. This is a one time expenditure. There is no monthly order obligation, no company with which to share your bonuses and commissions, no pre-ordained pay periods, no terms and conditions that you must follow. There is no company to go bankrupt, change their compensation plan, raise the price of their products, draft your checking account, hold your commission checks. There is no company... except for you. YOU ARE THE COMPANY!

You don't need to have a computer to do this, just access to one. You don't have to be in business to do this! But if you are, you'll never find a better way to promote your program, product or service.

And ... ANYONE... ANY AGE... ANY COUNTRY can participate!
No Social Security #, no Federal ID #, and no US address is required!

You have nothing to lose by checking this out... the risk is all mine. If you decide not to participate, show it to someone who's financial status is important to you. They will thank you every time they go to their mail box.

For full details hit REPLY NOW!

I've had success using a combination of Liquid Wrench, a hammer
to loosen any rust, and a scissors or hydraulic jack. Be careful
with the jack that you don't seriously bend any cross members and
that you don't apply enough force to cause pieces to let loose.
If you work at it slowly, you should be able to get the sections
apart. Of course, it is always fun to be doing this sort of stuff
while your 40+ feet in the air!

73 and be careful,
Todd

Have a complete plug and play hf station. 50 khz to 30 mhz. NO gaps. You
provide 13volts dc @ 25 amps,this will do the rest.
Yaesu FT757GXII,hand mike. 150 watts out,.5 to 30 mhz continous transmit

and receive. Some discoloration of cabinet from wear but exceptional transmitter and receiver. Has been mobile. And worked well!
Yaesu FRB757 Relay for hf Amplifier Just bought new on newsgroup a week ago.
Ameritron AL811 HF AMP. 600 watts PEP,160-10,mint,manual. New Svetlanas at xmas.

1050$ US Postal Money Order and I ship same day and e-mail tracking number. Price is firm no trades. Package deal. And unlike Bruce Felder,I know the history of this equipment. I hope everyone sees this ad through all that RogerPeterson/King Radio spam crap. Thanks Jim Can arrange sked if you want to hear it in action.

> Please prove me wrong Art. I will respect you when you do.

I don't want to prove you wrong. I just happen to know how the FCC in FCC caselaw has defined the terms interference, harmful interference, and communications. That's the real reason I'm relatively sure about what I said. Consider for example, on two meters if one station keys up, knowingly bringing up two different repeaters even though he only wants to talk on one. Is he interfering if there is a QSO, which he can't hear on the other repeater? The equivalent of jamming is of course another question, but if a control operator on a 440 repeater were to transmit over a foulmouthed ham on a repeater, would that be interference, even if the control operator's intent is to prevent the other transmission being heard? The same control operator keying up over someone discussing his bunions and the awful pain would be acting in violation of part 97 101(d). There is a presumption in interference that the communication interfered with is lawful, so if the communication isn't lawful it may not be entitled to protection. I personally am not going to key up over some cber running more power than I can and get into a shooting match. I don't run a linear, so I'm bound to usually lose. I also probably would have a duty to really ascertain that what I was hearing was really illegal operation, and not for example a group of hams in another country, who don't have cw subbands.

>Thanks in advance for any advice.

Depends on what your trying to achieve and at what frequency.

Foil coated onto a surface will act as a good reflector, as will wire
mesh (as long as the holes are no bigger than 1/10 of a wavelength).

A small paraboli of 80cm'ish will only be if much use above around 1 GHz
to give useable gain over a yagi.

Lower freqs in the VHF and UHF range will require bigger paraboli
to give bigger gain.

You also have to watch the beamwidths too. A large dish at microwave
frequencies can have a very narrowbeam width, making pointing it in the
right direct hard!

Let me know what you're actually trying to achive and I'll see if I can
help!

913. BAYCOM MODEM

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-12 00:00:00 UTC
From: alien14624@aol.com
Message-ID: <19970712102601.GAA01453@ladder02.news.aol.com>
Source record: 193758

Does anyone have a circuit for a Baycom Modem that they could mail to me? There is plenty of documentation in the Ham Libraries, but I cant find the actual circuit of the modem.

I want to try out packet to see whether its to my interest and liking. I dont want to spend a great deal of money to be able to do this. I gather the Baycom Modem is the cheapest option to be able to try out packet.

>K5MIL

Selective enforcement. Kind of like the prohibitions against freebanding, amplifiers, and communications over 150 miles on CB. Unless you're really, REALLY attracting attention to yourself...like making death threats that are overheard on some congresscritter's television, the FCC could care less.

> tissues of the human body affects it?

REPLY...

Mr. Tack Wei, you're talking about some pretty cutting edge stuff here. First of all, Amateur radio operators (and radio operators in general) are not usually concerned with transmitting into the human body, so I'm not sure you're going to get much help.

Second, you were a little vague on the "considerations" in question.

Are you considering the strength of the signal once it reaches the receiver (after passing through tissue)? Are you considering transmitter power? Are you considering which frequency to operate on? Are you considering tissue damage caused by RF transmissions? Are you considering cumulative effects on tissue caused by long-term RF transmissions? Are you considering false triggering caused by interference?

In other words, what considerations do you want us to address?

Your message leaves a lot of questions unanswered. What type of equipment are you going to use? Have you done any testing to see how much signal is needed to pass through "x" amount of tissue? How much tissue do you need to transmit through? And how much power does you nerve stimulators need to function?

When you reply, please also send email to me (I don't go into the Amateur Radio newsgroups that often). This is a very interesting topic and I would very much like to keep up with it.

Dwight Stewart

Mike, I deal almost exclusively with Ham Radio Outlet and have never had a complaint about their service or prices. They have a page at www.hamradio.com. Also, I assume from your domain that you are in Bethlehem PA, if so their is a decent hamfest in Augusta NJ, about an hour from you, on 7/20/97. I'm sure there will be some vendors there. Reply via email if you need more info. I'm relatively local.

>The transmitted carrier frequencies are between 1-20 Mhz.

That better be a mighty big bowl! To be an effective reflector,
the radius of the bowl needs to be at least 1/2 wavelength at
the operating frequency. At 1 MHz, that's a bowl diameter of
300 meters. At 20 MHz it is still 15m. Clancy's character was
using a satellite cellphone with an operating frequency on the
order of 2,000 MHz (2 GHz). That would only require a bowl
15 cm in diameter (though bigger is always better if you want
gain from the parabola).

Any good conductor will suffice for the reflector surface. Of course
silver, copper, or aluminum are the top three, but even steel will
work, particularly if you're more interested in the shielding property
than in reflector efficiency. Aluminum foil will work if you can shape
it properly, and maintain it in that shape.

I havnt performed this mod in a cpl yrs but if I remember correctly
all you do is locate a 'solder pad' of 8 or 10 'points',arranged in 2
paralell rows.You cut where the original two are connected and connect
two others.Very simple...took longer to open/shut the case than anything
else:<)

Disappointed with your commercial/shareware logging or
packet software for Windows? Try XMLog, freeware that's
available on the Internet. XMLog provides a flexible
set of coordinated logging and packet features.

XMLog is available on my home page:

http://www.xmlog.com

A new version (2.00) is now available which includes
support for PacketCluster nodes operating on the Internet.

Given that particulars such as date, time, place, agencies involved,
call-signs and the like are conspicuously ABSENT..., then yes. It does
sound farfetched, but let's play along....

> One evening my friend was scanning the 902-928 MHz Ham band with a popular
> STANDARD brand amateur radio, looking activity while doing some work on
> his computer. The radio stopped on a station which was later identified to
> be a cellular phone call.

Then he was NOT scanning a HAM band, was he. We don't use cell phone
frequencies, they don't use ours. If he did, in fact, receive a cell
phone transmission not intended for him, he broke the law. Period.

Hi Tack,

What you are talking about sounds very similar to a program I was involved with in New York state. Does this proceedure involve the threading of an electrode into the spinal column? If so, it has been done -- with no success.

In my case a receiver was implanted in my lower left flank and a small donut shaped antenna was secured over the skin above the implant. The radio signals travelled through the flesh into the receiver and were transformed into electrical signals which powered the implanted electrodes.

If this is a close approximation to your proposed procedure, please cantact me as soon as possible. The project is a waste of time and money. I should be able to help you find some of the research material.

Sincerely,
Cornel

Hi Vern:

Since you obviously have internet access, and assuming you have some kind of a compatable printer, you can download one from the FCC website and print it out.

73, Ray K1XV

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi all, I have a Kenwood TH-78A dual band Handi talkie that I'd like
to trade. It has 3 battery packs. One is 12 volts at 800ma, one is
12 volt at 700ma and the last is 7.2 volts at 800ma. ALL the packs
are in very good condition, the 12@800 and 7.2@800 are not even a year
old. The radio is an 8.5 - 9 out of 10. It is in excellent working
condition. It also has the mods done. It also comes with the manual
and a W&W charging CUP, NO CHARGER. I use the W&W charger
for another radio. I bought the radio without a charger.

I'd like to trade for an older 2 meter all mode rig with a digital
display and PL. It must be nice looking and good working
order. I'd like a base unit but would consider a mobile.
I will pay cash to balance the deal if needed.
What do you have??

NOTE It is only legal to transmit with this radio in the
Amateur band. Don't risk your license

NOTE If you want to E-mail me, you MUST REMOVE the NO.JUNKMAIL
in my address. It should read: mrusso@hoflink.com I'm trying to stop
the unwanted Junk Mail. SORRY for the inconvenience but it's getting
out of hand.

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

>The person you spoke to is an idiot and doesn't know his head from a hole
>in the ground. What is his name? What is his number? I'd like to speak
>to him.

Hi Nit,
Call the the FCC's 800 info number, and ask to speak to someone
knowledgable of amateur radio regulations. The operator transferred
my call, and the person I spoke with (about one year ago) answered
the questions I posed. Others have called, posed the same scenario,
and received the same answer.

Apparently, the FCC feels if a communication is not authorized, then
it can't be considered a "communication", hence no intentional inter-
ference occures.

No, I'm using a "wire beam" strung between two buildings on campus.
Wire beams can't be rotated - I'd have to rotate the building, and
the university won't allow me do that.

>I'd watch that shell at the university,they're keeping an
>eye on your cheapskate ass. Can't even afford legal internet access,have
>to route it through a shell.

You've got me perplexed again. I've got a UH UNIX account, and use a
Wyse terminal hardwired to the UNIX machine from my office. Whatever
you see when you finger me is what I've been using for about 6 years
now. I guess you must not be familiar with UNIX.

>to didge that marriage question,let's check something...1/4/54,

Yep, still single! I'm 43 and my girlfriend is about 20 years younger.
Eat your heart out!!!

>Perry
>University of Guam...that's interesting.Why are you single and living in
>Guam?

I'm in Hawaii, James!

>I'll get back with you later,I'm going to make you my project boy.

Without even lifting a finger I've got you wasting your time. This
is great! We've at least got one thing in common: We're both pro-
code. There's a CW email list if you're interested: Send a note to
majordomo@qsl.net and only write subscribe cw your@email.address
and you'll be hooked up.

Take care, friend,
Jeff KH2PZ / KH7 <--- that means I'm in Hawaii, James.

Sorry folks, got another question.

To make an antena more directional, I�m thinking of putting it thru� a metal bowl (read it in a Tom Clancy novel :)), acting as a parabolic reflector. Can I use ordinary kitchen aluminium foil too? And what�s the most easily/commonly materials available.
The transmitted carrier frequencies are between 1-20 Mhz.

I�ll also be checking here frequently for any followups.

Thanks in advance for any advice.

I don't agree with most out of Burt's mouth, but this is right on the nail head. All you have to do, is to listen to most nets (ARRL approved) and hear " Just wanted to get on the payroll". In other words, they have absolutely nothing to say and they cannot get a QSO of their own. A vast waste and most of them are ARRL members and proud to be members of a "rat pack".

POOR DEVILS !

I'm new to ham radio, and I'm currently looking to buy my first rig.
I would like to get an idea of features/prices/etc. that are available
before I actually buy anything. Are there any ham radio catalogs, or
other sources, that have this information? Contact #'s, URLs greatly
appreciated.

That's true. He can always be more strict than Part 97 requires if he wants
to be.

We apparently placed the incorrect demo version of SWARM (Solar Warning And Realtime Monitor) on our FTP/WWW system (ftp: solar.uleth.ca, WWW: http://solar.uleth.ca/solar/www/swarm-demo.html).

If any of you have grabbed and installed this demo on your system and are having troubles getting it to communicate through your firewall, please redownload the demo again (it is dated 12 July) and reinstall it. The version that is on the system now will run behind firewalls or without firewalls.

Sorry for any inconvenience this may have caused you.

I found out that the 900 MHz cordless phone bands + 900 Mhz amateur
bands are using the same freqs... I don't know what FCC / IC is
going to do... maybe they will take 900 MHz amateur bands off.

Hi All:

Listening to Bruce Williams talk show on AM Broadcast Band tonight.

I only get him by chance (rarely!) when surfing AM late nite.

He is a pilot and mentioned to another pilot the possibility of hearing
his broadcast on AEF(?).

I need more info about this type of receiver / band plan.

Just point me in the right direction.

960. FS Heathkit Radios

Newsgroup: rec.radio.amateur.misc
Date: 1997-07-13 00:00:00 UTC
From: sbrady@pce.net
Message-ID: <33c82154.3560450@news.pce.net>
Source record: 193601

Heathkit Radios for sale!

I have four (4) radios for sale. Two are close to
working, 2 I havn't been able to get anything to happen.

SB-101 All tubes. Cosmetically good. 400 kc CW filter.

SB-101 All tubes. Very clean. 400 kc CW filter
Some audio & Receive. No Xmit.
I think this one just needs a good tune-up.

HW-101 All tubes. Very clean. 400 kc CW filter.
Receives but need tuning.
Transmits but needs tuning.
This may be the best one of the bunch.

HW-101 Most tubes. Seen better days. No filter
Havn't even tried to get this one going.

One HP-23 and Two HP23A power supplies, all work.

Box of spare LMO's, feet, dial parts, tubes, etc.

I'm selling all of above as package for $100.00 plus
shipping. The CW filters I know alone have been going
for $40-$50 each on the used market.

If intrested, please contact Shane, WB2WPM at:

(716) 675-5797
or sbrady@pce.net
or wb2wpm @ke2vw.#wny.ny.usa.na

I'm located outside of Buffalo, New York.

If your a fixer-upper and good with tubes radio's I
know you'll be able to get 2 of these up and running
in no time. The other 2 maybe too.

Thanks for reading, and hope to hear from you.

73, Shane WB2WPM

He probably said ADF (Automatic Direction Finder) which is an old
radio navigation techniligy that works on LF and BCB stations. It
wouldn't help you unless you want to go up in a plane and try to
listen.

>ference occures.

Hi Jeff,

Apparently your FCC official didn't consider them a "signal" either. This is where things become kind of convoluted. We are becoming more emotional than rational within this issue and hearing only what we WANT to hear. Part 97 does not say, "Legal or illegal communications." It does not say, "...to any radio communication." It says, "...to any radio communication OR signal." My emphasis on OR.

I do not wish to speak to just anyone at this 800 number, I would like to speak to the individual with whom you spoke. I mean no names = no credibility in my book.

Now, if you and I were to fight this out in court (just an example as I have no interest in pursuing this outside of r.r.a.m.) I would win based on what is printed in the FCC rules. Just because we do not like it for its face value does not mean that we can paraphrase it to something that satisifies our egos. It don't work that way. :) Also, one or two FCC types at these defunct stations would not be the ones who would be defending the way the rule is written. They are not legal types and are only interpreting it as they are being lead to interpret it.

I am not an attorney, don't get me wrong. I HAVE taken some law classes and am a LITTLE familiar with how to read this text objectively...besides I have posed the same question (as yours to the FCC official) to a couple of attorneys (one of whose name is Tom Stennis--who taught one of my law classes--and who is the grandson of the late Mississippi Senator John Stennis) Tom's response led me to believe he interpreted it the same way as I.

On another note, lack of enforcement to the rules isn't because the FCC doesn't care as many seem to attempt to have us believe. But it takes money. We all know that the FCC has been severely cut in the funding arena. Enforcement is based upon priority (my assessment here) or letters to Hillary.

You'll notice that since the cellular industry has a lot of money and that certain legislative members would rather keep their cellular conversations quiet where the priorities are in regard to this issue. Must we say more?

3.14) Where can I get me one?
3.15) How do spam-cancellers cancel spam?

3.16) Can I sic The Man on these MAKE.MONEY.FAST losers (or other types of net abusers)?
3.17) What is a killfile, and how do I use one?
3.18) How do I killfile all crossposted messages?
3.19) What is the Usenet Death Penalty (UDP)?
3.20) Do all hierarchies have the same rules?
3.21) How about we start a campaign to stop all the spammers?

GROAN

4.1) Why are you net-abuse people such net-cops?
4.2) Isn't cyberporn a bigger issue than spamming?
4.3) Hey, I think my newsgroup is being invaded by alt.syntax.tactical!
4.4) Hey, I think my newsgroup is being invaded by the Usenet Freedom Council!
4.5) Hey, somebody posted an ad in {newsgroup}!
4.6) Hey, so-and-so's not being nice in {newsgroup}!
4.7) Hey, the Good Times virus--
4.8) Hey, there's this (AT&T, Jerry Garcia, whatever) banner message in the newsgroup descriptions!
4.9) Hey, one of those net.cops posted an ad for {something}! Haw! Haw!

-

POLITICS

1.1) What are the news.admin.net-abuse groups, and why were they created?

Originally, news.admin.net-abuse.misc was created to replace alt.current-events.net-abuse and news.admin.policy. The former was one of the most widely read and respectable alt.* groups, while the latter had become largely a mess of messages cross-posted from a.c-e.n-a and news.admin.misc.

news.admin.net-abuse.misc was then, not surprisingly, for discussions of net-abuse (see "What is net-abuse", below): definitions, occurances, objections, complaints, battle plans, peace plans, etcetera.

As you can guess, that generated amazing amounts of traffic. By early 1996, it had gotten to the point where it was impossible to keep up with the group without investing hours and hours of time.

In November of 1996, after many months of hard work from Tim Skirvin and others, the news.admin.net-abuse.* groups were reorganized. The charters are stored at:

http://www.uiuc.edu/ph/www/tskirvin/nana

1.3) What is net-abuse?

Since the newsgroup's inception, many curious forms of Usenet behavior have been discussed on it. Of these, spam is the one most universally accepted as 'net-abuse', which is why it gets its own section below. Other Frequently Aired Complaints are discussed throughout the FAQ.

However, as Neil Pawson says, "it's for abuse *of* the net, NOT abuse *on* the net." Just because somebody does something vile, we don't necessarily want to hear about it on n.a.n-a. To qualify as true panic-inspiring net-abuse, an act must interfere with the net-use of a large number of people. Examples of this: newsgroup flooding, widespread or organized forgery campaigns, widespread or organized account hackery, widespread or organized censorship attempts...

1.4) What is the purpose of this FAQ?

This FAQ is *not* intended as a comprehensive guide to netiquette. That is covered in RFC 1855. Many things that this FAQ appears to treat lightly are, in fact, extreme breaches of netiquette. The FAQ primarily attempts to answer: are these situations "net-abuse", in the sense that the whole world should hear about them?

1.5) What questions does the FAQ leave unanswered?

An infinite number, featuring:

* What to do about e-mail spam (coming soon)
* Who are the current net-abuse villains? or, Who is Jeff Slaton? or etc... (not really my bag--instead, see "Is there a blacklist of net-abusers?" below)

I'd also love to have a section on network/address tracking and informational tools (telnet, traceroute, nslookup, etc.) a la "The Spam-tracker's Handbook". Whatever happened to that?

Anyways, feel free to contribute whole new entries.

Perhaps some of the other net-abuse-related FAQs can be wholly dumped into this one. -- J.D.

1.6) Who's responsible for this FAQ?

It's currently maintained by J.D. Falk (jdfalk@cybernothing.org), and was originally maintained by by Scott Southwick (scotty@bluemarble.net). The information has been gleaned from various Usenet sources --primarily posts to the net-abuse groups made by a wide variety of authors-- and so the maintainer must actively disclaim all responsibilty for the veracity, advisability and/or legality of anything contained in the FAQ. Thanks to the following people who have contributed to it, or at least discussed its contents in a non-threatening manner:

Arthur Byrne, Pekka Pirinen, Keith "Justified and Ancient" Cochran, Lamont Granquist, Victoria "Support Wench" Fike, Steve Patlan, Wilf Leblanc, Seth Cohn, Neil Pawson, Bram Cohen, Mitchell Golden, Rahul Dhesi, Stephen Boursy, Mary Branscombe, David Cortesi, Alexander Lehmann, Greg Lindahl, Jack Hamilton, Morten Welinder, Axel Boldt, Richard Lee, an48985, Phil Pfeiffer, John van Essen, Pierre Beyssac, Michael Shields, Travis Corcoran, Tim Skirvin, Chris Lewis, Daniel J. Barrett, Ricardo H. Gonzalez, Dave Hayes, Ed Falk (no relation), Nathan J. Mehl, Peter Kappesser, Robert Braver, Loy Ellen Gross, booter, Johann Beda, Shaun Davis-Gluyas, and several others we have undoubtedly missed.

Contributions are always warmly welcomed, as are suggestions, corrections and criticism. However, you know where to shove the flames.

1.7) Where can I get it?

This FAQ will be posted thrice monthly (on the 1st, 11th, and 21st) to news.admin.net-abuse.*, news.admin.misc, news.groups.questions, and news.answers. It will also be available by anonymous ftp from rtfm.mit.edu and its mirror sites. The master hypertext version is available at:

http://www.cybernothing.org/faqs/net-abuse-faq.html

1.8) Is this the only Net Abuse FAQ?

Unfortunately, the topic of Net Abuse is so vast and so controversial that it cannot be covered completely in one document.

Of course, that didn't stop Daniel Barrett from trying, and doing a very good job. He wrote a book (published by O'Reilly Publishing) with the unfortunate but fitting title of Bandits on the Information Superhighway. More information is available at:

http://www.ora.com/item/bandits.html

I've removed much of the rest of this list, because Stan Kalisch III is doing a much better job of keeping his list of news.admin.net-abuse.* Newsgroups' Documents updated. You can view it at:

http://www.crl.com/~sjkiii/news-admin-net-abuse.html, or
ftp://ftp.crl.com/users/sj/sjkiii/pub/usenet/news-admin-net-abuse.txt

For an almost totally different viewpoint, see Dave Hayes's long-awaited document, "An Alternative Primer on Net Abuse, Free Speech, and Usenet," which at first denied the existence of this FAQ. You can find it and some related documents at:

http://www.jetcafe.org/~dave/usenet/

My answer to Dave's Alternative Primer is also worth reading:

http://www.cybernothing.org/faqs/dave-hayes.html

Then again, there's Ricardo H. Gonzalez's Introduction to news.admin.net-abuse.misc, which is unofficial in the sense that most of the people who really know what they're talking about when it comes to Net Abuse have pointed out glaring errors in that document, and he doesn't seem to care. For the most part, it is his own opinion (most FAQs try to be as factual as possible, or at least show a number of different opinions.) It also makes many references to a fictional "autocyberretromoderation bot," which will supposedly cancel any messages posted to news.admin.net-abuse.misc which do not fit some unknown secret criteria determined by some unknown secret cabal.

The truth is, there is an ANTI-cancellation bot active on news.admin.net-abuse.misc -- any time a message in that newsgroup is cancelled, "Dave the Ressurector" will repost it, no matter who issued the cancel message. However, Mr. Gonzales does not believe this to be true, no matter how many times the evidence is presented.

If you wish to read his viewpoint, the document may still be at:

http://www.paranoia.com/~ricardo/faq.html

After reading that, I'd highly suggest taking a look at Fluffy's response:

http://www.macconnect.com/~fluffy/faqs/rgfaq.html

There are a number of very good indices of net abuse-related documents:

Fight Spam on the Internet! (Scott Hazen Mueller)
http://www.vix.com/spam/

news.admin.net-abuse.* homepage (Tim Skirvin)
http://www.math.uiuc.edu/~tskirvin/home/nana/

MaasInfo/Other/NetAbuse (Robert E. Maas)
http://NCTUCCCA.Edu.Tw/documents/Internet/MaasInfo/Other/NetAbuse.html

1.9) I don't understand a single word of this.

One of the best starting places for learning about Usenet is Indiana University's Usenet Resources page, at:

http://scwww.ucs.indiana.edu/NetRsc/usenet.html

[Scotty put that together at his old job, but doesn't maintain it any more.] It's got links to most Usenet primers, netiquette documents and news FAQs, Son-of-RFC-1036, some charters, newsreader man pages, etcetera.

SPAM, SPAMMERS, and MOOSES

2.1) What is Spam?

It's a luncheon meat, kinda pink, comes in a can, made by Hormel. Most Americans intuitively, viscerally associate "Spam" with "no nutritive or aesthetic value." The luncheon meat has its own newsgroup, alt.spam.

The term "spam," as used on this newsgroup, means "the same article (or essentially the same article) posted an unacceptably high number of times to one or more newsgroups." CONTENT IS IRRELEVANT. 'Spam' doesn't mean "ads." It doesn't mean "abuse." It doesn't mean "posts whose content I object to." Spam is a funky name for a phenomenon that can be measured pretty objectively: did that post appear X times? (See 3.1, "Yeah, but how many is X?')

There have been "customized" spams--where each post made some effort to apply to each individual newsgroup, but the general thrust of each article was the same. A huge straw poll on news.admin.policy, news.admin.misc, and a.c-e.n-a (December 1994) showed that as many of 90% of the readers felt that cancellations for these posts were justified. So, simply put: if you plan to post the same or extremely similar messages to dozens of newsgroups, the posts are probably going to get cancelled.

If you feel that a massive multi-post you are planning constitutes an exception, you are more than welcome to run the idea past the readers of news.admin.net-abuse.misc for feedback first.

2.2) What is Excessive Multi-Posting (EMP)?

Spam (and spam by any other name still stinks.)

Some people feel that "spam" is an inappropriately misleading name for messages of this type. Others feel that "EMP" is misleading. Since spam is the most widely recognized term, that's what we use in this FAQ.

2.3) What about cross-posting?

Here's the difference between cross-posting and multi-posting: cross-posting is where you list all the groups on the Newsgroups: line of a single post. Multi-posting is where you have some idiotic program fire an individual copy of the post to each group. (If you do it manually, that's even more idiotic.) A cross-post only takes up the space of 1 post (one on every newsserver in the world), no matter how many groups; multi-posting takes up the space of dozens or hundreds of posts (on every newsserver in the world), which is why it infuriates so many people.

So, cross-posting is better than multi-posting. It's still very often a bad idea, and if you get carried away it'll still get cancelled (see 3.2, "What is the Breidbart Index (BI)?")

If you *must* cross-post, set the followups to a single appropriate group by adding a header line like:

Followup-to: group.name.here

This prevents the readers of all the groups from having to deal with the thread for weeks afterwards if the readers of only one or two of the groups take an interest in it.

You can also add Followup-to: poster, which will (in most newsreaders) ask anybody who tries to follow up to e-mail you instead.

2.4) Where did the term 'Spam' come from?

The prevailing theory is that it is from the song in Monty Python's famous spam-loving vikings sketch that goes, roughly, "Spam spam spam spam, spam spam spam spam, spam spam spam spam..." The vikings would sing this over and over, rising in volume until it was impossible for the other characters in the sketch to converse (which was, of course, a large part of the joke.)

The term is rumored to have originated, as far as the Internet is concerned, from the MUD/MUSH community. Nathan J. Mehl, newsadmin for BBN Planet, tells the most reliable story known to date...

Well, briefly summarized:

My friend-who-shall-remain-nameless was, ah, a younger and callower man, circa 1985 or so, and happened onto one of the original Pern MUSHes during their most Sacred Event -- a hatching. After trying to converse sanely with two or three of the denizens, he came quickly to the conclusion that they area all of bunch of obsessive-compulsive nitwits with no life and less literary taste. (Probably true.)

So, as the 'eggs' were 'hatching', he assigned a keyboard macro to echo the line:

SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM

...and proceeded to invoke it once every couple of seconds, until one of the wizards finally booted him off.

...which would have probably been that last that anyone ever heard or thought of it, except that it apparently ingrained itself into the memory of the PernMUSHers, and forever after there was the legend of 'that asshole who spammed us.'

Every once in a while, this story makes it back to my friend, and he tries very hard to keep a straight

face...

Another theory is related to throwing a "brick" of the luncheon meat at a rotating metal fan. However, none of the long-time "spam watchers" have any idea where that theory was from before it showed up in a Time magazine article.

The term wasn't first used to describe mass news posting, however. See the Hacker's Jargon File for previous uses of the word.

2.5) Tell me about the Great Spammers.

To paraphrase Yoda, spam does not make one great. However, a surprising number of people prefer infamy to obscurity, and would rather be hated than unknown. Some of those people take up spamming as a way to gain the notoriety that their warped psyches crave.

So as not to duplicate effort, here's an excellent archive devoted to the various bug- and honey-bears of the Net:

* The Kook of the Month site (particularly the Net.Legends FAQ)
http://www.wetware.com/mlegare/kotm/KotM.html
* The Net.Legends FAQ (html version)
http://www.uiuc.edu/ph/www/tskirvin/legends.html

Not all of the kooks and legends discussed there are spammers, or even villains. Spam fans should pay particular attention to the entries on Serdar Argic, the spiritual ancestor of today's spammers.

2.6) Who were Canter and Siegel?

Unfortunately, it's "Who *are* Canter and Siegel?" They're lawyers, authors, and Usenet newbies _par excellence_. Super-newbies. Honorary Permanent Newbies. When they sit around the net, they sit *around the net*...

C+S weren't the first spammers, but they were so gothically clumsy about it, and so intent on making a buck, that people were terrified and infuriated into starting alt.current-events.net-abuse (which has since been replaced by the news.admin.net-abuse.* groups.

2.7) Where can I get more information about them?

The best archive of Canter and Siegel-related postings is maintained by C&S themselves; last time somebody checked with "ls -r", the fun-loving net.lawyers seemed to be storing every post that mentioned them (can you say "grepping for libel cases"?) It's worth noting that to date nobody has been sued by them for anything net-related, and probably not for anything else either.

If you're not C or S yourself, though, the next best info source is Thomas Leavitt's "The Canter & Siegel Report," available via anonymous ftp from:

ftp://ftp.armory.com/pub/user/leavitt/

Those files are zipped. Users with access to 1990s technology should check out the WWW versions at:

ftp://ftp.armory.com/pub/user/leavitt/html/cands.report.html
ftp://ftp.armory.com/pub/user/leavitt/html/candsrpt.two.html
ftp://ftp.armory.com/pub/user/leavitt/html/candsrpt.three.html

There's also a wonderful article on the pair available at:

http://www.eye.net/Howling/Kooks/Kreeps/CS2.htm
(apparently now an invalid link; anybody know where it went?)

Many, many more docs are available, but I'll stop there, because there's really no reason to dwell on the past. In fact, Canter & Siegel have both posted to news.admin.net-abuse.misc and other groups from time to time (always multiposted -- they seem genetically unable to crosspost), and it has always been quite obvious that all they wanted was to generate more publicity for themselves.

2.8) What should we do about the book?

What book?

2.9) Who is Cancelmoose[tm]?

Cancelmoose[tm] is, to misquote some wise poster, "the greatest public servant the net has seen in quite some time." Once upon a time, the moose would send out spam-cancels and then post notice anonymously to news.admin.policy, news.admin.misc, and a.c-e.n-a. The Moose stepped to the fore on its own initiative, at a time (mid 1994) when spam-cancels were irregular and disorganized, and behaved altogether admirably-- fair, even-handed, and quick to respond to comments and criticism, all without self-aggrandizement or martyrdom. Cancelmoose[tm] quickly gained near-unanimous support from the readership of all three above-mentioned groups.

Nobody knows who Cancelmoose[tm] really is, and there aren't even any good rumors. However, the moose now has an e-mail address (moose@cm.org) and a web site (http://www.cm.org.)

By early 1995, several others had stepped into the spam-cancel business, and appeared to be comporting themselves well, after the Moose's manner. The moose has now gotten out of the business, and is more interested in ending spam (and cancels) entirely (see "What is NoCeM?")

2.10) Who are the current spam cancellers?"

Chris Lewis and Robert Braver take care of most of the spam (John Milburn has retired from the spam-cancelling biz), while Richard Depew cleans up spews from horribly misconfigured news servers, large misplaced binaries, and the like. Somebody calling himself The Unknown News Administrator has been helping as well, and so have a few others. Michael Scheidell and others deal with problems (usually out-of-area postings) in various local hierarchies.

Overall, Chris Lewis is considered to be the expert on spam cancelling, and one of the experts on Usenet in general.

For a good overview of who's doing what right now, hop over to news.admin.net-abuse.bulletins and check headers.

NITTY-GRITTY

3.1) Yeah, but how many times is 'X'?

How many posts does it take to push the spam envelope? To use up all your spam charity points? For a bare-bones spam? To trigger the raging-spam-cancellers-from-Hell?

Among those who agree that spam should be defined solely by quantity,

----------> 20 <----------

appears to be the magic number, or at least a number so middle-of-the-road that it provokes very little passionate dissent in either direction. Notably, Cancelmoose[tm] refuses to set a firm number, in the belief that people would simply post [X-1] messages. It's safe to say that a couple incidents of 19-post spams would cause the magic number to plummet. Thus, 20 should be considered a vague approximation only.

Passionately dissenting note: Rahul Dhesi [dhesi@rahul.net], one of the fathers of the cancel-bot movement, sticks by the following definition:

More than five physically distinct postings with
substantially identical content posted within a period
of ten days.

The most reliable document describing current spam thresholds and guidelines is a draft FAQ posted weekly to news.admin.net-abuse.misc by Chris Lewis. It also describes the Breidbart Index (see below) in greater detail. That FAQ is not now available on the web at:

http://www.vix.com/spam/others/thresholds.html

3.2) What is the Breidbart Index (BI)?

The Breidbart Index (BI) is a measure of the breadth of any multi-posting, cross-posting, or combination of the two. BI is defined as the sum of the square roots of how many newsgroups each article was posted to. If that number approaches 20, then the posts will probably be cancelled by somebody.

For instance, four identical posts to nine newsgroups each (4 times 3) has a BI of 12. However, nine identical posts to four newsgroups each (9 times 2) has a BI of 18.

3.3) What is NoCeM?

NoCeM is an end to all this spam, and an end to all this cancelling. With NoCeM (pronounced "No See 'Em"), your newsreader goes out and gets certain posts (from trusted parties) that contain lists of junk articles (ECP, spam, etc.) Your newsreader then hides those articles from you.

Note that right now most NoCeM newsreaders are only for Unix. The only exception is Gnus, the newsreader for EMACS, which will work on any platform that supports a fully functioning version of GNU EMACS.

The move to NoCeM is headed by the Cancelmoose[tm] (moose@cm.org), and the moose's web site has all the info you might want about NoCeM:

http://www.cm.org/

Also check out the newsgroup alt.nocem.misc, which will degenerate into a Big 7 newsgroup (news.lists.nocem?) one of these days.

3.4) Is there a blacklist of net-abusers?

Yes, Axel Boldt maintains the world-renowned "Blacklist of Internet Advertisers" at:

http://math-www.uni-paderborn.de/~axel/BL/blacklist.html

Now, before you get really worried about McCarthyism and such, go and look at Axel's self-imposed rules for maintaining the blacklist. He's much fairer than most of those people deserve.

3.5) How can I tell if a post is forged?

Gandalf (gandalf@digital.net) has written the alt.spam FAQ, or "Figuring out fake E-Mail & Posts," which focuses on how to track spam. It is available at:

http://digital.net/~gandalf/spamfaq.html

For a rough article on forgery, originally constructed for this FAQ out of information contributed by Robert Bonomi, Arthur Byrne, Emma Pease, and Alan Bostick, see:

http://sckb.ucssc.indiana.edu/kb/data/all.afco.html

For more information on headers, see RFC-1036, "Standard for Interchange of Usenet Messages," at:

http://www.cis.ohio-state.edu/htbin/rfc/rfc1036.html

3.6) How can I tell how many newsgroups an article was posted to?

For people who can't use the classic "grepping the newsspool" method, nn or nngrab may be able to help. (The following is adapted from a posting by Lee Rudolph--thanks.)

You can force the Unix newsreader nn to ignore your .newsrc and create a "merged newsgroup" consisting only of articles containing a certain word in their subject line. For instance, to gather all articles at your site containing the word "spam" in their subject line, use this command:

% nngrab spam

That's basically a faster version of

% nn -i -s"spam" -mXx

Caution: this latter method can be a long, tedious process. See the nn man page for more details.

3.7) My group is full of crap. Why isn't it being cancelled?

Lots of groups are full of inappropriate posts, widely crossposted advertising, and so forth -- just pop into misc.misc or alt.sex for as many examples as you can possibly handle.

As annoying as it may be, these posts may not be cancellable spam. Keep in mind that the cancel thresholds err in the favor of the excessive poster, and still leave *lots* of room to post in a manner that most people find inappropriate.

A single, excessively crossposted post can not be cancellable in and of itself. In order for a single post to be cancelled, it would have to be posted to 400 groups (sqrt(400) = 20). This is not possible due to limits of news software.

Robert Braver reports "When checking for spam, I often must pass over groups of messages that are likely considered off-topic intrusions in each of the newsgroups it is posted to, but it doesn't hit the cancel threshold."

One good solution here would be for the newsadmins of a particular locality to come to a consensus for more stringent thresholds for their respective local hierarchies, as has been done in the atl.* and fl.* hierarchies.

Of course, the messages may actually be cancellable spam, especially when you consider the current 45-day window. But, this type can be harder for the automatic spam detectors to find.

Once a slow spam is detected and posted to news.admin.net-abuse.announce, it makes it easier to keep tabs on a particular poster or series of messages in the future. This kind of spam is probably where "field reports" to news.admin.net-abuse.misc are the most useful.

3.8) OK, I'm certain it's spam. Who should I mail-bomb?

Don't mail-bomb anybody. Harrassment is illegal everywhere. If somebody's done something truly evil, they'll get enough single responses from individuals to achieve the same effect.

3.9) OK, I'm certain it's spam. What should I do?

* Check n.a.n-a.sightings. If somebody's already made a definitive spotting, there's no sense in an "I've seen it, too" post.

* Include a *complete* header from one copy of the spam in your post to n.a.n-a.sightings. Set followups to n.a.n-a.misc.

* Say how many newsgroups at your site it was posted to; list 20 or more of them. (See "How do I know how many newsgroups an article was posted to?")

* Complain politely to the spammer and the Usenet administrator at the spammer's site (whose address should be "usenet@site.name" or "news@site.name"; if that fails, try "abuse" or "postmaster".) Request that the Usenet administrator post a response to n.a.n-a.announce, detailing what actions have been taken. Again, remember to be polite -- it is rare that the administrators are in any way responsible for the message.

3.10) What about e-mail spam?

You can always complain about unsolicited e-mail to both the bozo that sent it to you and the bozo's postmaster. To write to a postmaster, just substitute the perp's username in their address (e.g., bozo@otherwise.lovely.com) with "postmaster" (i.e., postmaster@otherwise.lovely.com.) Please be brief and polite with the postmasters, include a copy of the e-mail you received, and leave the subject-line intact (in case the postmaster wants to set up an auto-responder.)

Be sure to include all the headers (not just From, To, Date, and Subject, which is the default in most mail programs) in your reply, just in case the e-mail was cleverly forged. That way, the postmaster can trace it back to its source if necessary.

3.11) I e-mailed a complaint to so-and-so about their {post, mail}, and now they're threatening to complain to my system administrator. What should I do?

Let your sys-admin know right away what's happening. Tell them the story, briefly. Offer to supply the post(s) in question, so that your admin doesn't have to go searching. Then keep them updated on

any further threats.

If you're brief, polite, and on the right side, you can usually find an ally in your sys-admin.

3.12) List of Basic Administrative Addresses

The search for the best person to complain to at any site has led to much speculation and arguments, even among admins at the same site. However, if a message to the original poster doesn't get you anywhere, somebody at one of the following addresses might be able to help.

abuse
A lot of ISP's and network backbones have created 'abuse' addresses for complaints about net-abuse. That's usually the best place to start.

usenet or news
For Usenet abuse, you can usually reach a news administrator through one or both of these addresses. A notable exception is Compuserve, which utilizes the address <usemail@csi.compuserve.com>.

postmaster
RFC 822, the document which set most of the current standards for Internet e-mail back in 1982, makes it mandatory for all sites which pass e-mail to have a postmaster address so that problems can be reported. The purpose of postmaster has expanded at many sites to include net-abuse, both e-mail and otherwise.

Administrative or Technical Contacts
If you have access to the whois command, you can type (for example) 'whois example.com' to find out who the administrative and technical contacts are for a domain. This will list their e-mail address, and often their phone and FAX numbers (but remember, be polite, because the contacts aren't usually responsible for their users' misbehavior, and harassment is illegal everywhere.)

Upstream Providers
If none of the above get you anywhere, you can try going to a site's upstream providers. For news, check the Path: header of the original message. To the right, you'll see the originating site. Each site between you and them is separated by an exclamation point, as in the partial example below:

!dummy-host.example.com!nohost.mydomain.com!not-for-mail

As you can see, the message originated at the machine foobar.mydomain.com. The next news hop is dummy-host.example.com, so you'd complain to news@example.com

if the admins at mydomain.com were uncooperative.

For e-mail, determining who's upstream can often be confusing -- many people get it wrong. Unless you're familiar with the whois and traceroute tools, I'd suggest not even bothering.

NEW: now you can send mail to domain.name@abuse.networks.net, and it will (probably) be sent to the appropriate contact for that domain. Be advised that this is a wholly experimental service.

3.13) What is a cancel-bot?

First off, "cancel-bot" is an unfortunate misnomer, and one that the conventional media have understandably misunderstood. "Bot" implies that something is out there, running unattended, cancelling whatever meets its nefarious qualifications...but that is quite rare, and is only done when both the user and their administrators are completely unwilling to stop spamming. For the most part, all spam-cancels are sent out manually and deliberately by actual human beings. (They happen to use a program that is commonly referred to as a "cancel-bot".)

A cancel-bot, misnomer aside, is a program that sends out cancel messages; you feed it the message-IDs of posts, and it sends out a cancel message for each one (see RFC 1036.) Cancel messages are normally sent out by a newsreader in response to a user's request to cancel a message, using a newsreader command, *if* the user was also the original poster of the message. Sites will ignore cancel messages that don't appear to come from the original poster. Cancel-bots work around this restriction by using header lines that make it look like the original poster sent out the cancel; they'll usually add something like a "Cancelled-By" header line as well, to keep things nominally above-board.

Use of a cancel-bot against anything besides 'consensus spam' outrages people, as it should. See alt.religion.scientology for sample discussions.

For more information on cancels (especially in regards to net abuse), Tim Skirvin has written a very good FAQ, available at:

http://www.uiuc.edu/ph/www/tskirvin/cancel.faq

3.14) Where can I get me a cancel-bot?

If you have to ask, you should probably wait a while. ;}

3.15) How do the spam-cancellers cancel spam?

* They make bloody sure they know how to use their cancel-bot;
* They confirm the spam themselves;
* They announce their action to n.a.n-a.announce. This prevents everyone from waiting around and wondering whether anyone's done anything.

Here's a standard section from a cancel-notification post by the
beloved Cancelmoose(TM):

The $alz cancel. and Path: cyberspam conventions were
followed. [The $alz convention is to create your cancel
message-ID by prepending 'cancel.' to the original one.
The cyberspam convention is to use- 'Path:
cyberspam!usenet' so that sites that do not want your
cancels can easily opt out. Please use these when
cancelling spam.]

3.16) Can I sic The Man on these MAKE.MONEY.FAST losers (or other types of
net abusers)?

You can complain about e-mail or Usenet pyramid schemes (at least
those involving Americans somehow) to the FTC:

STAFF CONTACT: Bureau of Consumer Protection
Ms. Broder
bbroder@ftc.gov

Before doing so, consider seriously whether you actually want to
encourage government intervention. The number of 'net cases the
FTC has been involved in is very low at this point; in an ideal
world, it would probably remain that way.

But if you really want to go after MMF lusers (or anybody spammy
any type of tax fraud scheme), you can complain to the IRS:

] Subject: Reporting MMF to the IRS [long]
] Date: 11 Mar 1997 09:26:20 -0500
] Reply-To: Inspector Andrew Fried
]
] Over the past six months, my email address has appeared in the "fraud
] killer list", a list of agency contacts used to report potential tax
] fraud violations by the "make money fast" (MMF) Usenet spammers. Since
] complaints such as those don't fall under my specific area of
] jurisdiction, I have been manually forwarding all such messages to the
] appropriate department within my agency.
]
] In order to facilitate routing complaints to the IRS via email, I have
] established two special mailboxes. Email sent to those addresses will
] be automatically forwarded to the correct organizations within the
] Service. This will assure faster delivery and reduce congestion on
] my personal email account. The addresses are as follows:
]
] net-abuse@nocs.insp.irs.gov
] Use this address to report make money fast (MMF) schemes. Mail sent to
] this address will be forwarded to the Criminal Investigation Division
] (CID) for appropriate action.
]
] hotline@nocs.insp.irs.gov
] Mail sent to this address will be forwarded to Internal Security

] (Inspection), the IRS's "internal affairs" type organization. Internal
] Security is responsible for investigating criminal acts which attempt to
] corrupt our tax system. Internal Security is also responsible for the
] protection of all Service employees. Use this address to report
] attempted bribery of IRS employees, conspiracy to defraud the tax
] system, threats against the IRS or IRS employees or any other suspected
] criminal acts affecting the integrity of our tax system. Please don't
] forward the infamous "IRS Abuse" reports here.
]
] Reports of tax fraud should be sent directly to your regional IRS
] Service Center; there is currently no Internet email address for
] reporting those suspected offenses.
]
] Please distribute this message to newsgroup moderators and members of
] your newsgroups. Should you have any other non-tax related questions,
] feel free to write to me directly at:
] afried@nocs.insp.irs.gov
]
] --
] Inspector Andrew Fried IRS Internal Security
] Voice: (202) 622-3535 1111 Constitution Ave, NW
] Fax: (202) 622-8681 Washington, DC 20224

A non-governmental organization which deals in such things (and
more) is the National Fraud Information Center, which is funded by
grants from major corporations and works in cooperation with
federal, state, local and international law enforcement agencies.
Their purpose is organize, classify, and forward "stuff" to the
appropriate body: state's a.g, FTC, FBI, Secret Service, wherever.

Thus they are not "law enforcement" and the problems of inaction
by local district attorneys, etc. persist (d.a's have "too much
work to do" to go after an individual posting a chain letter). You
can e-mail them at <nfic@internetmci.com>, or get information from
their web page, which is at:

http://www.fraud.org/

For stock fraud and the like, some people have been complaining to
the Securities and Exchange Commission at the address
<enforcement@sec.gov>. I'm not sure if there've been any results
from that corner, however.

3.17) What is a killfile, and how do I use one?

A killfile enables you to permanently avoid reading posts by
certain people, or from a certain site, or whose Subject: lines
contain particular words... Check out the RN killfile FAQ at:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/killfile-faq/faq.html

If your newsreader doesn't allow killfiling, write the author of
the newsreading software and ask them to add support for

killfiles. Although it doesn't discuss killfiling, see 'The "Good Net-Keeping Seal of Approval" for Usenet Software' at:

http://www2.thecia.net/users/rnewman/Good_Netkeeping_Seal

for more information on what makes a good newsreader.

And, for good advice on who to ignore, see the Global Killfile:

http://www.uiuc.edu/ph/www/tskirvin/global/

3.18) How do I killfile all crossposted messages?

It's becoming quite common for people to killfile all messages crossposted to more than X newsgroups, because this cuts down on the amount of blatantly off-topic crap they have to read.

This is simplest to do in the rn family (rn, trn, strn, etcetera) using a killfile entry like the following:

/^Newsgroups: .*,.*,.*,.*,.*,./h:,

That one kills anything posted to more than six groups, plus all of the followups in that thread (that's what the comma at the end means.) For less groups, use less .* entries -- for more groups, use more.

Peter Kappesser suggests a somewhat more efficient form for servers which support the Xref extension to the News Overview database file (if you aren't sure if your server supports it, just check and see if there's an Xref: header in the messages you see. If there is, it does.):

/:.*:.*:.*:.*:.*:/HXref:,

In this, the number of colons equals the threshold number of groups. This is more efficient because the Xref header line is transferred with the NOV file when you enter the group, so trn can process it quickly. If you kill on the Newsgroups line, trn has to fetch from the server at least the header for every article in the group in order to examine it for the kill.

One slight difference is that Xref contains only those groups carried by the server, which may not necessarily be all those listed in Newsgroups. However, this isn't often a problem -- most ECP's are to a dozen or more groups, so it doesn't matter that Newsgroups lists 27 groups while Xrefs only has 18, it's still greater than 6!

3.19) What is the Usenet Death Penalty (UDP)

There are two different things commonly referred to as "UDP."

The one least argued about could be called "shunning" or "aliasing," in which a newsadmin (running INN unoff3 or above, or

using the 'shun' patch to earlier versions of INN) can add a site's pathhost to their ME line. They simply won't get any messages from that site. Some may consider this censorship, but it fits quite well with the simple but often forgotten concept that a newsadmin can do whatever they want on their own machine so long as it doesn't cause any problems for other newsadmins.

The other Usenet Death Penalty is automatic cancellation of all messages from a site, or from a person, or based on a regular expression. This is sometimes done when a spam (or spew) continues unabated even after the spam cancellers and other net-abuse activists have attempted to contact somebody and ask them to stop. As you can guess, there are arguments about this which have literally been going on for years.

Currently, the general consensus among news.admin.net-abuse.misc participants is that UDP of either type should only be employed after every other method has been tried and failed.

In the useless trivia column, the term "Usenet Death Penalty" was first coined by Eliot Lear. The first software to perform it was written three years earlier by Karl Kleinpaste in 1990, and was 28 lines long. Karl is also known as being the author of the anonymous server software.

The second (previous versions of the FAQ referred to it as the first) was written by Rich $alz (the inventor of INN) in Perl in April, 1993. It was 76 lines long, including instructions for use.

3.20) Do all hierarchies have the same rules?

Nope. This FAQ mainly deals with what's considered net abuse in the "Big 8" (comp.*, humanities.*, misc.*, news.*, rec.*, sci.*, soc.*, and talk.*) and alt.* (we also touch on biz.* a little bit.) But there are many hierarchies -- especially regional and local -- which have begun to adopt much stricter policies on net abuse.

The main reason behind this is that the local hierarchies usually have a smaller target audience. For example, dc.* exists for the Washington, D.C. metropolitian area, fl.* for the state of Florida, and so forth. Long ago in the history of Usenet (okay, it was only two or three years ago) all the news hosts in Florida traded fl.* with each other, and it didn't leak too far out-of-state -- but now, with so many national news providers, you can read fl.* pretty much anywhere in the world.

The point, however, is that just because you have /access/ to a heirarchy doesn't mean your message is appropriate for it. Many locally oriented groups, especially *.forsale and *.jobs groups, are deluged with non-local messages, which are often crossposted to a large number of different, incongruent local heirarchies. While these don't individually set off alarms on the world's

spam-watching software, they can make a group become useless for local postings because it's so hard to wade through all the misplaced stuff.

So, most local hierarchies now have people (or, more often, groups of people) watching over them, sending copies of the FAQ or Charter to people who post inappropriately, and -- in extreme situations -- cancelling the misplaced messages. Cancellation after the fact is commonly referred to as "retromoderation," and is still a topic of hot debate.

For more specific information, the Regional Guidelines and Periodic Postings Database can be viewed at:

http://www.unicom.com/regional/

Or, watch the group itself for a while to see if there're rules of any type. Remember that in this case, "a while" means at least two weeks, since FAQs don't get posted every day, and "but I saw other people advertising their thigh cream here!" is a really lame excuse.

There is also a mailing list dedicated to discussing the mechanics and policies that regional FAQ maintainers and retromoderators follow. For more information, contact <us-region-request@megalith.miami.fl.us>.

3.21) How about we start a campaign to stop all the spammers?

We already did -- and it's about time!

http://www.vix.com/spam/

GROAN

4.1) I hate net-cops like you people.

Who will watch the watchmen? net-cop.cops like this, apparently. ;} Anyways, anyone who wanted to police the net would be a pig-headed, unrealistic fool. Thankfully, we (the regular participants in news.admin.net-abuse.misc) just want to shoot spam out of the sky, because

* We hate it,
* It feels good, and
* We can.

Anyways, if you don't like spam being cancelled at your site, you can have your upstream feeds alias your site to "cyberspam". (Actually, you can only do that if you're the newsadmin -- but users are subject to the whim of their newsadmin anyway, so if you don't like your newsadmin's policies, you can always just build your own server and get a feed from someplace else.)

4.2) Isn't cyberporn a bigger problem than spamming?

No matter what the more sensationalistic media outlets may try to tell you, "cyberporn" is not a real problem. For more information, see cyberNOTHING's Cyberporn Report, at:

http://www.cybernothing.org/cno/reports/cyberporn.html

As for illegal stuff, like child pornography -- there are existing laws against that in most countries, so those people will go to jail, and good riddance. But they are ruining Usenet in the meantime.

Net abuse, as described in this document, is a big problem, and will continue to be a problem unless Something Is Done.

Nevertheless, a case could be made that other issues (Government-imposed censorship, etcetera) are more or equally important. But that's not what this FAQ, or the net-abuse newsgroups, cover.

4.3) Hey, I think my group's being invaded by alt.syntax.tactical!

I'm sorry to hear that. Please don't bring that subject up again here. Good luck... Keith "Justified and Ancient" Cochran, who has been wrongfully accused of a.s.t involvement himself, adds: "I would suggest the first thing you do is take a chill pill." (Note that there is no second thing to do. However, you may want to pass the time reading the alt.bigfoot FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/bigfoot/top.html

--particularly the part about cats.)

See also 3.15, "What is a killfile, and how do I use one?"

4.4) Hey, I think my group's being invaded by the "Usenet Freedom Council!"

The abusive "Usenet Freedom Council" seems to be made up of a number of accounts all owned & operated by Dr. John Grubor, a.k.a. Manus, a.k.a. DrG, a.k.a DrGodFuck, ad nausea infinitum. It used to include former Kook of the Month Steve Boursy, former Kook of the Month Bob Allisat, and former Kook of the Month Nominee Vladimir Fomin (who also no longer has access to the 'net under that false name.)

Now that news.admin.* people have pretty much unanimously killfiled him, he's started going to other newsgroups and attempting to get outraged responses from people by posting what can only be described as patent bullshit.

The best thing to do is ignore him. This, of course, made easier with a good killfile (see 3.15, "What is a killfile, and how do I use one?") The REAL "Usenet Freedom Council" was dreamt up by Dave Hayes. The best way to understand it is to view his "Freedom Knights" home page, at:

http://www.jetcafe.org/~dave/usenet/

Afterwards, I'd suggest reading "Dave Hayes / Freedom Knights: An Alternative View," which some feel is a little more realistic (and there are even those who say it's being too nice.)

http://www.cybernothing.org/faqs/dave-hayes.html

4.5) Hey, somebody posted an ad in {newsgroup}!

So?

All right, all right: first, check to see if the post was obviously forged (see 3.5, "How can I tell if a post is forged?")

Then check to see if it's spam (see 2.1, "What is Spam?" and 3.6, "How do I know when I've got spam on my hands?") It's probably not. We only want to hear about it if it's spam.

If the ad is off-topic, and you really can't let it go, check out the advice in 4.6, "Hey, so-and-so's not being nice in {newsgroup}!"

4.6) Hey, so-and-so's not being nice in {newsgroup}!

Happens all the time. We don't want to hear about it. However, here are some things you can do (written by Keith "Justified and Ancient" Cochran):

"The first thing to do is take it up with user@some.site. If you can't achieve a mutual understanding, then you _MIGHT_ (note, not WILL, _MIGHT_) want to mail postmaster@some.site with your complaint. If you are going to write to postmaster@some.site, be sure to include the full, unedited post you have a problem with, a short but descriptive summary of why you have a problem with it, and a short, but descriptive explanation of what you would like to have happen. "Note that this does not apply to MAKE.MONEY.FAST. If you see a copy of M.M.F, just e-mail postmaster@some.site, including the article ID, and the first paragraph of the post."

Of course, the descriptive explanation of what you would like to have happen must also be realistic. Since most ISP's have a policy regarding commercial posts, it's common to ask the postmaster to reiterate or reinforce whatever policy they may have on hand, rather than asking right away for the user to be nuked. It's not nice to tell system administrators what to do -- especially if you don't know the entire situation yourself.

See also 3.15, "What is a killfile, and how do I use one?"

4.7) Hey, the "Good Times" virus--

...is a total, 100%, long-proven hoax. For the complete story,
see:

http://www.nsm.smcm.edu/News/GTHoax.html

4.8) Hey, there's this (AT&T, Jerry Garcia, whatever) banner message in the
newsgroup descriptions!

We know, we know... It's a fairly common prank to add bunches of
newsgroups whose descriptions spell something out. Ask your local
news adminstrator to remove the whole lot.

4.9) Hey, one of those net.cops posted an ad for {something}! Haw! Haw!

"Ad" does not equal "spam".

"Ad" does not equal "net-abuse".

APPENDIX

news.admin.net-abuse.misc charter:

news.admin.net-abuse.misc is for the discussion of possible abuses
of netnews and e-mail. It is for the discussion of standards of
net abuse, to suggest appropriate courses of action (if any) to
net abuse and to post reports of alleged occurrences of net abuse.
Relevant topics include events associated with net abuse such as:
spamming (posting many individual copies of any article),
excessive crossposting of non-germane articles, injection of
malformed articles into the news system (broken gateways, for
example), or other forms of "roboposting" involving large numbers
of postings to one or more groups, forging identity of postings,
forged approval to moderated groups, forged cancellation of
articles including cancellation of net abuse articles, use of
rmgroup/newgroup in an abusive manner, large-scale mailings to
mailing lists or other mail-bombing, deciding what isn't net
abuse, general issues of netiquette, methods for resolving
conflicts, proposed blacklists and boycotts, "renegade" sites,
etc. Postings include news reports, reviews, and conferences, and
net-abuse FAQs. Although commercial posts are not inherently
net-abuse, proper methods of posting commercial material are
within the scope of this group.

news.admin.net-abuse.announce charter and guidelines:

news.admin.net-abuse.announce Charter and Guidelines

1. What topics are relevant to this group? Events associated
with net abuse, such as:
o posting many individual copies of any article.

Or, excessive crossposting of non-germane articles.
o injection of malformed articles into the news system
(broken gateways, for example), or other forms of

"roboposting" involving large numbers of postings to one or more groups.
o Forging identity of postings
o Forged approval to moderated groups
o Forged cancellation of articles not included above. Note that cancellation of net abuse articles is also relevant to the topic of net abuse.
o Use of rmgroup/newgroup in an abusive manner
o large-scale mailings to mailing lists or other mail-bombing

Postings to this group may also include announcements relevant to the topic of net abuse, such as news reports, reviews, and conferences, and possible net-abuse FAQs.

The purpose of this group is not to decide the guilt or innocence of any parties, but rather to simply report on the activity (much like the crime section found in many local newspapers). It must be kept clear that the net is a new legal area, but it is also one with a lot of unwritten rules. The moderators are in no way are attempting to act as judges, lawyers, or mediators.

2. Posting of reports of this kind of activity in no way implies that net-wide cancellation of such articles are to be encouraged. How local news admins deal with such incidents is strictly up to them. The moderators of this group should not be held responsible for actions taken by others in response to articles posted to news.admin.net-abuse.announce.

3. No moderator will engage in the following activities:

o cancellation of any posts other than ones posted by them, excepting articles with forged approval to newsgroups they moderate or, if they are a news admin, posts originating from their site (following the local site's procedures).
o Sending of "mailbombs", threats, abusive e-mail, or other attacks in response to alleged net abuse.

4. We are committed to providing accurate information regarding events related to net abuse (with emphasis on Usenet) in a timely manner. However, as we the moderators must often rely on the reports of others, whenever we have not confirmed a report ourselves we will state so in the posting.

5. Right of Reply. If posts have been made in this group concerning an individual's alleged net abuse and the individual and/or site from which it originated have suffered negative consequences in the form of articles cancelled, accounts cancelled, or substantial negative email; then the individual and site each have the right to one (but no more

than one) reply for the purpose of justification, rebuttal,
or reports of actions taken to correct or cancel the alleged
abuse.

6. Examples of inappropriate postings:
o redundant reports of events
o Trivial events, for example "Hey, this guy posted an ad
to comp.sys.xyz!"

7. Administravia
o Approval of postings will be made by a team of
moderators.
o Change of moderators will be made by majority. Forcible
removal of a moderator will be by consensus of remaining
moderators.
o Any rule changes will be made by majority of the
moderators.

Initial moderators:
David Barr (barr@math.psu.edu)
Joel Furr (jfurr@acpub.duke.edu)
Paul Phillips (paulp@CERF.NET)
Abby Franquemont-Guillory (abbyfg@tezcat.com)

Netiquette Guidelines

Status of This Memo

This memo provides information for the Internet community. This
memo does not specify an Internet standard of any kind.
Distribution of this memo is unlimited.

Abstract

This document provides a minimum set of guidelines for Network
Etiquette (Netiquette) which organizations may take and adapt for
their own use. As such, it is deliberately written in a bulleted

format to make adaptation easier and to make any particular item easy (or easier) to find. It also functions as a minimum set of guidelines for individuals, both users and administrators. This memo is the product of the Responsible Use of the Network (RUN) Working Group of the IETF.

Table of Contents

1. Introduction
2. One-to-One Communication
3. One-to-Many Communication
4. Information Services
5. Selected Bibliography
6. Security Considerations
7. Author's Address

1.0 Introduction

In the past, the population of people using the Internet had "grown up" with the Internet, were technically minded, and understood the nature of the transport and the protocols. Today, the community of Internet users includes people who are new to the environment. These "Newbies" are unfamiliar with the culture and don't need to know about transport and protocols. In order to bring these new users into the Internet culture quickly, this Guide offers a minimum set of behaviors which organizations and individuals may take and adapt for their own use. Individuals should be aware that no matter who supplies their Internet access, be it an Internet Service Provider through a private account, or a student account at a University, or an account through a corporation, that those organizations have regulations about ownership of mail and files, about what is proper to post or send, and how to present yourself. Be sure to check with the local authority for specific guidelines.

We've organized this material into three sections: One-to-one communication, which includes mail and talk; One-to-many communications, which includes mailing lists and NetNews; and Information Services, which includes ftp, WWW, Wais, Gopher, MUDs and MOOs. Finally, we have a Selected Bibliography, which may be used for reference.

2.0 One-to-One Communication (electronic mail, talk)

We define one-to-one communications as those in which a person is communicating with another person as if face-to-face: a dialog. In general, rules of common courtesy for interaction with people should be in force for any situation and on the Internet it's doubly important where, for example, body language and tone of voice must be inferred. For more information on Netiquette for communicating via electronic mail and talk, check references

[1,23,25,27] in the Selected Bibliography.

2.1 User Guidelines

2.1.1 For mail:

* Unless you have your own Internet access through an Internet provider, be sure to check with your employer about ownership of electronic mail. Laws about the ownership of electronic mail vary from place to place.

* Unless you are using an encryption device (hardware or software), you should assume that mail on the Internet is not secure. Never put in a mail message anything you would not put on a postcard.

* Respect the copyright on material that you reproduce. Almost every country has copyright laws.

* If you are forwarding or re-posting a message you've received, do not change the wording. If the message was a personal message to you and you are re-posting to a group, you should ask permission first. You may shorten the message and quote only relevant parts, but be sure you give proper attribution.

* Never send chain letters via electronic mail. Chain letters are forbidden on the Internet. Your network privileges will be revoked. Notify your local system administrator if your ever receive one.

* A good rule of thumb: Be conservative in what you send and liberal in what you receive. You should not send heated messages (we call these "flames") even if you are provoked. On the other hand, you shouldn't be surprised if you get flamed and it's prudent not to respond to flames.

* In general, it's a good idea to at least check all your mail subjects before responding to a message. Sometimes a person who asks you for help (or clarification) will send another message which effectively says "Never Mind". Also make sure that any message you respond to was directed to you. You might be cc:ed rather than the primary recipient.

* Make things easy for the recipient. Many mailers strip header information which includes your return address. In order to ensure that people know who you are, be sure to include a line or two at the end of your message with contact information. You can create this file ahead of time and add it to the end of your messages. (Some mailers do this automatically.) In Internet parlance, this is known as a ".sig" or "signature" file. Your .sig file takes the place of your business card. (And you can have more than one to apply

in different circumstances.)

* Be careful when addressing mail. There are addresses which may go to a group but the address looks like it is just one person. Know to whom you are sending.

* Watch cc's when replying. Don't continue to include people if the messages have become a 2-way conversation.

* In general, most people who use the Internet don't have time to answer general questions about the Internet and its workings. Don't send unsolicited mail asking for information to people whose names you might have seen in RFCs or on mailing lists.

* Remember that people with whom you communicate are located across the globe. If you send a message to which you want an immediate response, the person receiving it might be at home asleep when it arrives. Give them a chance to wake up, come to work, and login before assuming the mail didn't arrive or that they don't care.

* Verify all addresses before initiating long or personal discourse. It's also a good practice to include the word "Long" in the subject header so the recipient knows the message will take time to read and respond to. Over 100 lines is considered "long".

* Know whom to contact for help. Usually you will have resources close at hand. Check locally for people who can help you with software and system problems. Also, know whom to go to if you receive anything questionable or illegal. Most sites also have "Postmaster" aliased to a knowledgeable user, so you can send mail to this address to get help with mail.

* Remember that the recipient is a human being whose culture, language, and humor have different points of reference from your own. Remember that date formats, measurements, and idioms may not travel well. Be especially careful with sarcasm.

* Use mixed case. UPPER CASE LOOKS AS IF YOU'RE SHOUTING.

* Use symbols for emphasis. That *is* what I meant. Use underscores for underlining. _War and Peace_ is my favorite book.

* Use smileys to indicate tone of voice, but use them sparingly. :-) is an example of a smiley (Look sideways). Don't assume that the inclusion of a smiley will make the recipient happy with what you say or wipe out an otherwise insulting comment.

* Wait overnight to send emotional responses to messages. If you have really strong feelings about a subject, indicate it via FLAME ON/OFF enclosures. For example:
FLAME ON: This type of argument is not worth the bandwidth it takes to send it. It's illogical and poorly reasoned. The rest of the world agrees with me.
FLAME OFF

* Do not include control characters or non-ASCII attachments in messages unless they are MIME attachments or unless your mailer encodes these. If you send encoded messages make sure the recipient can decode them.

* Be brief without being overly terse. When replying to a message, include enough original material to be understood but no more. It is extremely bad form to simply reply to a message by including all the previous message: edit out all the irrelevant material.

* Limit line length to fewer than 65 characters and end a line with a carriage return.

* Mail should have a subject heading which reflects the content of the message.

* If you include a signature keep it short. Rule of thumb is no longer than 4 lines. Remember that many people pay for connectivity by the minute, and the longer your message is, the more they pay.

* Just as mail (today) may not be private, mail (and news) are (today) subject to forgery and spoofing of various degrees of detectability. Apply common sense "reality checks" before assuming a message is valid.

* If you think the importance of a message justifies it, immediately reply briefly to an e-mail message to let the sender know you got it, even if you will send a longer reply later.

* "Reasonable" expectations for conduct via e-mail depend on your relationship to a person and the context of the communication. Norms learned in a particular e-mail environment may not apply in general to your e-mail communication with people across the Internet. Be careful with slang or local acronyms.

* The cost of delivering an e-mail message is, on the average, paid about equally by the sender and the recipient (or their organizations). This is unlike other media such as physical mail, telephone, TV, or radio. Sending someone mail may also cost them in other specific ways like network bandwidth, disk space or CPU usage. This is a fundamental economic reason why unsolicited e-mail advertising is unwelcome (and is forbidden

in many contexts).

* Know how large a message you are sending. Including large files such as Postscript files or programs may make your message so large that it cannot be delivered or at least consumes excessive resources. A good rule of thumb would be not to send a file larger than 50 Kilobytes. Consider file transfer as an alternative, or cutting the file into smaller chunks and sending each as a separate message.

* Don't send large amounts of unsolicited information to people.

* If your mail system allows you to forward mail, beware the dreaded forwarding loop. Be sure you haven't set up forwarding on several hosts so that a message sent to you gets into an endless loop from one computer to the next to the next.

2.1.2 For talk:

Talk is a set of protocols which allow two people to have an interactive dialogue via computer.

* Use mixed case and proper punctuation, as though you were typing a letter or sending mail.

* Don't run off the end of a line and simply let the terminal wrap; use a Carriage Return (CR) at the end of the line. Also, don't assume your screen size is the same as everyone else's. A good rule of thumb is to write out no more than 70 characters, and no more than 12 lines (since you're using a split screen).

* Leave some margin; don't write to the edge of the screen.

* Use two CRs to indicate that you are done and the other person may start typing. (blank line).

* Always say goodbye, or some other farewell, and wait to see a farewell from the other person before killing the session. This is especially important when you are communicating with someone a long way away. Remember that your communication relies on both bandwidth (the size of the pipe) and latency (the speed of light).

* Remember that talk is an interruption to the other person. Only use as appropriate. And never talk to strangers.

* The reasons for not getting a reply are many. Don't assume that everything is working correctly. Not all versions of talk are compatible.

* If left on its own, talk re-rings the recipient. Let it ring one or two times, then kill it.

* If a person doesn't respond you might try another tty. Use finger to determine which are open. If the person still doesn't respond, do not continue to send.

* Talk shows your typing ability. If you type slowly and make mistakes when typing it is often not worth the time of trying to correct, as the other person can usually see what you meant.

* Be careful if you have more than one talk session going!

2.2 Administrator Issues

* Be sure you have established written guidelines for dealing with situations especially illegal, improper, or forged traffic.

* Handle requests in a timely fashion - by the next business day.

* Respond promptly to people who have concerns about receiving improper or illegal messages. Requests concerning chain letters should be handled immediately.

* Explain any system rules, such as disk quotas, to your users. Make sure they understand implications of requesting files by mail such as: Filling up disks; running up phone bills, delaying mail, etc.

* Make sure you have "Postmaster" aliased. Make sure you have "Root" aliased. Make sure someone reads that mail.

* Investigate complaints about your users with an open mind. Remember that addresses may be forged and spoofed.

3.0 One-to-Many Communication (Mailing Lists, NetNews)

Any time you engage in One-to-Many communications, all the rules for mail should also apply. After all, communicating with many people via one mail message or post is quite analogous to communicating with one person with the exception of possibly offending a great many more people than in one-to-one communication. Therefore, it's quite important to know as much as you can about the audience of your message.

3.1 User Guidelines

3.1.1 General Guidelines for mailing lists and NetNews

* Read both mailing lists and newsgroups for one to two months before you post anything. This helps you to get an understanding of the culture of the group.

* Do not blame the system administrator for the behavior of the system users.

* Consider that a large audience will see your posts. That may include your present or your next boss. Take care in what you write. Remember too, that mailing lists and Newsgroups are frequently archived, and that your words may be stored for a very long time in a place to which many people have access.

* Assume that individuals speak for themselves, and what they say does not represent their organization (unless stated explicitly).

* Remember that both mail and news take system resources. Pay attention to any specific rules covering their uses your organization may have.

* Messages and articles should be brief and to the point. Don't wander off-topic, don't ramble and don't send mail or post messages solely to point out other people's errors in typing or spelling. These, more than any other behavior, mark you as an immature beginner.

* Subject lines should follow the conventions of the group.

* Forgeries and spoofing are not approved behavior.

* Advertising is welcomed on some lists and Newsgroups, and abhorred on others! This is another example of knowing your audience before you post. Unsolicited advertising which is completely off-topic will most certainly guarantee that you get a lot of hate mail.

* If you are sending a reply to a message or a posting be sure you summarize the original at the top of the message, or include just enough text of the original to give a context. This will make sure readers understand when they start to read your response. Since NetNews, especially, is proliferated by distributing the postings from one host to another, it is possible to see a response to a message before seeing the original. Giving context helps everyone. But do not include the entire original!

* Again, be sure to have a signature which you attach to your message. This will guarantee that any peculiarities of mailers or newsreaders which strip header information will not delete the only reference in the message of how people may reach you.

* Be careful when you reply to messages or postings. Frequently replies are sent back to the address which originated the post - which in many cases is the address of a list or group! You may accidentally send a personal response to a great many people, embarrassing all involved. It's best to type in the address instead of relying on "reply."

* Delivery receipts, non-delivery notices, and vacation programs are neither totally standardized nor totally reliable across the range of systems connected to Internet mail. They are invasive when sent to mailing lists, and some people consider delivery receipts an invasion of privacy. In short, do not use them.

* If you find a personal message has gone to a list or group, send an apology to the person and to the group.

* If you should find yourself in a disagreement with one person, make your responses to each other via mail rather than continue to send messages to the list or the group. If you are debating a point on which the group might have some interest, you may summarize for them later.

* Don't get involved in flame wars. Neither post nor respond to incendiary material.

* Avoid sending messages or posting articles which are no more than gratuitous replies to replies.

* Be careful with monospacing fonts and diagrams. These will display differently on different systems, and with different mailers on the same system.

* There are Newsgroups and Mailing Lists which discuss topics of wide varieties of interests. These represent a diversity of lifestyles, religions, and cultures. Posting articles or sending messages to a group whose point of view is offensive to you simply to tell them they are offensive is not acceptable. Sexually and racially harassing messages may also have legal implications. There is software available to filter items you might find objectionable.

3.1.2 Mailing List Guidelines

There are several ways to find information about what mailing lists exist on the Internet and how to join them. Make sure you understand your organization's policy about joining these lists and posting to them. In general it is always better to check local resources first before trying to find information via the Internet. Nevertheless, there are a set of files posted periodically to news.answers which list the Internet mailing lists and how to subscribe to them. This is an invaluable resource for finding lists on any topic. See also references [9,13,15] in the Selected Bibliography.

* Send subscribe and unsubscribe messages to the appropriate address. Although some mailing list software is smart enough to catch these, not all can ferret these out. It is your responsibility to learn how the lists work, and to send the correct mail to the correct place. Although many many mailing lists adhere to the convention of having a "-request" alias

for sending subscribe and unsubscribe messages, not all do. Be sure you know the conventions used by the lists to which you subscribe.

* Save the subscription messages for any lists you join. These usually tell you how to unsubscribe as well.

* In general, it's not possible to retrieve messages once you have sent them. Even your system administrator will not be able to get a message back once you have sent it. This means you must make sure you really want the message to go as you have written it.

* The auto-reply feature of many mailers is useful for in-house communication, but quite annoying when sent to entire mailing lists. Examine "Reply-To" addresses when replying to messages from lists. Most auto-replys will go to all members of the list.

* Don't send large files to mailing lists when Uniform Resource Locators (URLs) or pointers to ftp-able versions will do. If you want to send it as multiple files, be sure to follow the culture of the group. If you don't know what that is, ask.

* Consider unsubscribing or setting a "nomail" option (when it's available) when you cannot check your mail for an extended period.

* When sending a message to more than one mailing list, especially if the lists are closely related, apologize for cross-posting.

* If you ask a question, be sure to post a summary. When doing so, truly summarize rather than send a cumulation of the messages you receive.

* Some mailing lists are private. Do not send mail to these lists uninvited. Do not report mail from these lists to a wider audience.

* If you are caught in an argument, keep the discussion focused on issues rather than the personalities involved.

3.1.3 NetNews Guidelines

NetNews is a globally distributed system which allows people to communicate on topics of specific interest. It is divided into hierarchies, with the major divisions being: sci - science related discussions; comp - computer related discussions; news - for discussions which center around NetNews itself; rec - recreational activities; soc - social issues; talk - long-winded never-ending discussions; biz - business related postings; and alt - the alternate hierarchy. Alt is so named because creating an alt group does not go through the same process as creating a group in the

other parts of the hierarchy. There are also regional hierarchies, hierarchies which are widely distributed such as Bionet, and your place of business may have its own groups as well. Recently, a "humanities" hierarchy was added, and as time goes on its likely more will be added. For longer discussions on News see references [2,8,22,23] in the Selected Bibliography.

* In NetNews parlance, "Posting" refers to posting a new article to a group, or responding to a post someone else has posted. "Cross-Posting" refers to posting a message to more than one group. If you introduce Cross-Posting to a group, or if you direct "Followup-To:" in the header of your posting, warn readers! Readers will usually assume that the message was posted to a specific group and that followups will go to that group. Headers change this behavior.

* Read all of a discussion in progress (we call this a thread) before posting replies. Avoid posting "Me Too" messages, where content is limited to agreement with previous posts. Content of a follow-up post should exceed quoted content.

* Send mail when an answer to a question is for one person only. Remember that News has global distribution and the whole world probably is NOT interested in a personal response. However, don't hesitate to post when something will be of general interest to the Newsgroup participants.

* Check the "Distribution" section of the header, but don't depend on it. Due to the complex method by which News is delivered, Distribution headers are unreliable. But, if you are posting something which will be of interest to a limited number or readers, use a distribution line that attempts to limit the distribution of your article to those people. For example, set the Distribution to be "nj" if you are posting an article that will be of interest only to New Jersey readers.

* If you feel an article will be of interest to more than one Newsgroup, be sure to CROSSPOST the article rather than individually post it to those groups. In general, probably only five-to-six groups will have similar enough interests to warrant this.

* Consider using Reference sources (Computer Manuals, Newspapers, help files) before posting a question. Asking a Newsgroup where answers are readily available elsewhere generates grumpy "RTFM" (read the fine manual - although a more vulgar meaning of the word beginning with "f" is usually implied) messages.

* Although there are Newsgroups which welcome advertising, in general it is considered nothing less than criminal to advertise off-topic products. Sending an advertisement to each and every group will pretty much guarantee your loss of connectivity.

* If you discover an error in your post, cancel it as soon as possible.

* DO NOT attempt to cancel any articles but your own. Contact your administrator if you don't know how to cancel your post, or if some other post, such as a chain letter, needs canceling.

* If you've posted something and don't see it immediately, don't assume it's failed and re-post it.

* Some groups permit (and some welcome) posts which in other circumstances would be considered to be in questionable taste. Still, there is no guarantee that all people reading the group will appreciate the material as much as you do. Use the Rotate utility (which rotates all the characters in your post by 13 positions in the alphabet) to avoid giving offense. The Rot13 utility for Unix is an example.

* In groups which discuss movies or books it is considered essential to mark posts which disclose significant content as "Spoilers". Put this word in your Subject: line. You may add blank lines to the beginning of your post to keep content out of sight, or you may Rotate it.

* Forging of news articles is generally censured. You can protect yourself from forgeries by using software which generates a manipulation detection "fingerprint", such as PGP (in the US).

* Postings via anonymous servers are accepted in some Newsgroups and disliked in others. Material which is inappropriate when posted under one's own name is still inappropriate when posted anonymously.

* Expect a slight delay in seeing your post when posting to a moderated group. The moderator may change your subject line to have your post conform to a particular thread.

* Don't get involved in flame wars. Neither post nor respond to incendiary material.

3.2 Administrator Guidelines

3.2.1 General Issues

* Clarify any policies your site has regarding its subscription to NetNews groups and about subscribing to mailing lists.

* Clarify any policies your site has about posting to NetNews groups or to mailing lists, including use of disclaimers in .sigs.

* Clarify and publicize archive policy. (How long are articles kept?)

* Investigate accusations about your users promptly and with an open mind.

* Be sure to monitor the health of your system.

* Consider how long to archive system logs, and publicize your policy on logging.

3.2.2 Mailing Lists

* Keep mailing lists up to date to avoid the "bouncing mail" problem.

* Help list owners when problems arise.

* Inform list owners of any maintenance windows or planned downtime.

* Be sure to have "-request" aliases for list subscription and administration.

* Make sure all mail gateways operate smoothly.

3.2.3. NetNews

* Publicize the nature of the feed you receive. If you do not get a full feed, people may want to know why not.

* Be aware that the multiplicity of News Reader clients may cause the News Server being blamed for problems in the clients.

* Honor requests from users immediately if they request cancellation of their own posts or invalid posts, such as chain letters.

* Have "Usenet", "Netnews" and "News" aliased and make sure someone reads the mail.

3.3 Moderator Guidelines

3.3.1 General Guidelines

* Make sure your Frequestly Asked Questions (FAQ) is posted at regular intervals. Include your guidelines for articles/messages. If you are not the FAQ maintainer, make sure they do so.

* Make sure you maintain a good welcome message, which contains subscribe and unsubscribe information.

* Newsgroups should have their charter/guidelines posted regularly.

* Keep mailing lists and Newsgroups up to date. Post messages in a timely fashion. Designate a substitute when you go on vacation or out of town.

4.0 Information Services (Gopher, Wais, WWW, ftp, telnet)

In recent Internet history, the 'Net has exploded with new and varied Information services. Gopher, Wais, World Wide Web (WWW), Multi-User Dimensions (MUDs) Multi-User Dimensions which are Object Oriented (MOOs) are a few of these new areas. Although the ability to find information is exploding, "Caveat Emptor" remains constant. For more information on these services, check references [14,28] in the Selected Bibliography.

4.1 User Guidelines

4.1.1. General guidelines

* Remember that all these services belong to someone else. The people who pay the bills get to make the rules governing usage. Information may be free - or it may not be! Be sure you check.

* If you have problems with any form of information service, start problem solving by checking locally: Check file configurations, software setup, network connections, etc. Do this before assuming the problem is at the provider's end and/or is the provider's fault.

* Although there are naming conventions for file-types used, don't depend on these file naming conventions to be enforced. For example, a ".doc" file is not always a Word file.

* Information services also use conventions, such as www.xyz.com. While it is useful to know these conventions, again, don't necessarily rely on them.

* Know how file names work on your own system.

* Be aware of conventions used for providing information during sessions. FTP sites usually have files named README in a top level directory which have information about the files available. But, don't assume that these files are necessarily up-to-date and/or accurate.

* Do NOT assume that ANY information you find is up-to-date and/or accurate. Remember that new technologies allow just about anyone to be a publisher, but not all people have discovered the responsibilities which accompany publishing.

* Remember that unless you are sure that security and authentication technology is in use, that any information you submit to a system is being transmitted over the Internet "in the clear", with no protection from "sniffers" or forgers.

* Since the Internet spans the globe, remember that Information Services might reflect culture and life-style markedly different from your own community. Materials you find offensive may originate in a geography which finds them acceptable. Keep an open mind.

* When wanting information from a popular server, be sure to use a mirror server that's close if a list is provided.

* Do not use someone else's FTP site to deposit materials you wish other people to pick up. This is called "dumping" and is not generally acceptable behavior.

* When you have trouble with a site and ask for help, be sure to provide as much information as possible in order to help debug the problem.

* When bringing up your own information service, such as a homepage, be sure to check with your local system administrator to find what the local guidelines are in affect.

* Consider spreading out the system load on popular sites by avoiding "rush hour" and logging in during off-peak times.

4.1.2 Real Time Interactive Services Guidelines (MUDs MOOs IRC)

* As in other environments, it is wise to "listen" first to get to know the culture of the group.

* It's not necessary to greet everyone on a channel or room personally. Usually one "Hello" or the equivalent is enough. Using the automation features of your client to greet people is not acceptable behavior.

* Warn the participants if you intend to ship large quantities of information. If all consent to receiving it, you may send, but sending unwanted information without a warning is considered bad form just as it is in mail.

* Don't assume that people who you don't know will want to talk to you. If you feel compelled to send private messages to people you don't know, then be willing to accept gracefully the fact that they might be busy or simply not want to chat with you.

* Respect the guidelines of the group. Look for introductory materials for the group. These may be on a related ftp site.

* Don't badger other users for personal information such as sex, age, or location. After you have built an acquaintance with another user, these questions may be more appropriate, but many people hesitate to give this information to people with whom they are not familiar.

* If a user is using a nickname alias or pseudonym, respect that user's desire for anonymity. Even if you and that person are close friends, it is more courteous to use his nickname. Do not use that person's real name online without permission.

4.2 Administrator Guidelines

4.2.1 General Guidelines

* Make clear what's available for copying and what is not.

* Describe what's available on your site, and your organization. Be sure any general policies are clear.

* Keep information, especially READMEs, up-to-date. Provide READMEs in plain ascii text.

* Present a list of mirrors of your site if you know them. Make sure you include a statement of copyright applicable to your mirrors. List their update schedule if possible.

* Make sure that popular (and massive) information has the bandwidth to support it.

* Use conventions for file extensions - .txt for ascii text; .html or .htm for HTML; .ps for Postscript; .pdf for Portable Document Format; .sgml or .sgm for SGML; .exe for non-Unix executables, etc.

* For files being transferred, try to make filenames unique in the first eight characters.

* When providing information, make sure your site has something unique to offer. Avoid bringing up an information service which simply points to other services on the Internet.

* Don't point to other sites without asking first.

* Remember that setting up an information service is more than just design and implementation. It's also maintenance.

* Make sure your posted materials are appropriate for the supporting organization.

* Test applications with a variety of tools. Don't assume everything works if you've tested with only one client. Also, assume the low end of technology for clients and don't create applications which can only be used by Graphical User Interfaces.

* Have a consistent view of your information. Make sure the look and feel stays the same throughout your applications.

* Be sensitive to the longevity of your information. Be sure to date time-sensitive materials, and be vigilant about keeping this information well maintained.

* Export restrictions vary from country to country. Be sure you understand the implications of export restrictions when you post.

* Tell users what you plan to do with any information you collect, such as WWW feedback. You need to warn people if you

plan to publish any of their statements, even passively by just making it available to other users.

* Make sure your policy on user information services, such as homepages, is well known.

Sounds like the problem I had with my Toyota. Even a marine alternator filter on the output did not cure it. Changed the alternator and all is well. I even removed the filter and still no problem. Try putting a lage cap across the alternator output, like about 10,000mfd or more and see if it goes away. If not, change the alternator. I should add that I had no problem with the alternator not charging the battery and I did not look at the ripple.

Hi all,

I have now added a QRP linear amplifier to the collection. It was designed as the final stage for my Phasing-type SSB exciter, but with over 30dB of gain it will make a lovely CW / SSB transmitter when used with a simple oscillator / driver. I have used it at 10 watts with my Grid Dip Oscillator (GDO) as a driver.

The hand-drawn PCB foil pattern is also included as a GIF file (drawn before I ever had a PC computer).

I am adding more circuits to my homepage constantly, as long as
I have time available to do it. Have fun with QRP (and QRO).
Harry, SM0VPO (G4VVJ), Upplands V&#65533;sby, Sweden.

Propagation Forecast Bulletin 28 ARLP028
From Tad Cook, K7VVV
Seattle, WA July 12, 1997
To all radio amateurs

SB PROP ARL ARLP028
ARLP028 Propagation de K7VVV

Conditions are still flat. The average solar flux, sunspot number and planetary A index hardly varied from last week to this week. Because short term forecasts are based upon the previous solar rotation, no activity is predicted for the next month, except for a possible slightly unsettled period around July 23 or 24.

A card arrived from W7ZT in Arizona noting that he didn't notice even any seasonal sporadic E skip on the higher frequencies over the Field Day weekend, and an interesting letter came from W4VOS concerning comparisons of previous solar cycles. He noted that it is mostly true that each odd-numbered solar cycle was greater than the previous cycle. We are now awaiting activity from cycle 23, so this is a cause for some hope. But with a chart from a 12 year old issue of a DX newsletter which showed cycle data provided by KH6BZF, W4VOS commented that cycle 9 around 1850 was smaller than cycle 8, and cycle 5 around 1805 was much smaller than cycle 4. Will cycle 23 be the third cycle in history to break this rule? Let us hope not.

Readers who wish to comment can email the author at tad@ssc.com.

Sunspot Numbers for July 3 through 9 were 12, 12, 11, 11, 26, 25 and 31 with a mean of 18.3. 10.7 cm flux was 69, 69.7, 69.7, 71.8, 71.7, 71.2 and 70.2, with a mean of 70.5, and estimated planetary A indices were 7, 7, 4, 4, 14, 5, and 11, with a mean of 7.4.

Netiquette Guidelines

Status of This Memo

This memo provides information for the Internet community. This memo does not specify an Internet standard of any kind. Distribution of this memo is unlimited.

Abstract

This document provides a minimum set of guidelines for Network Etiquette (Netiquette) which organizations may take and adapt for their own use. As such, it is deliberately written in a bulleted format to make adaptation easier and to make any particular item easy (or easier) to find. It also functions as a minimum set of guidelines for individuals, both users and administrators. This memo is the product of the Responsible Use of the Network (RUN) Working Group of the IETF.

Table of Contents

1. Introduction
2. One-to-One Communication
3. One-to-Many Communication
4. Information Services
5. Selected Bibliography
6. Security Considerations
7. Author's Address

1.0 Introduction

In the past, the population of people using the Internet had "grown up" with the Internet, were technically minded, and understood the nature of the transport and the protocols. Today, the community of Internet users includes people who are new to the environment. These "Newbies" are unfamiliar with the culture and don't need to know about transport and protocols. In order to bring these new users into the Internet culture quickly, this Guide offers a minimum set of behaviors which organizations and individuals may take and adapt for their own use. Individuals should be aware that no matter who supplies their Internet access, be it an Internet Service Provider through a private account, or a student account at a University, or an account through a corporation, that those organizations have regulations about

ownership of mail and files, about what is proper to post or send, and how to present yourself. Be sure to check with the local authority for specific guidelines.

We've organized this material into three sections: One-to-one communication, which includes mail and talk; One-to-many communications, which includes mailing lists and NetNews; and Information Services, which includes ftp, WWW, Wais, Gopher, MUDs and MOOs. Finally, we have a Selected Bibliography, which may be used for reference.

2.0 One-to-One Communication (electronic mail, talk)

We define one-to-one communications as those in which a person is communicating with another person as if face-to-face: a dialog. In general, rules of common courtesy for interaction with people should be in force for any situation and on the Internet it's doubly important where, for example, body language and tone of voice must be inferred. For more information on Netiquette for communicating via electronic mail and talk, check references [1,23,25,27] in the Selected Bibliography.

2.1 User Guidelines

2.1.1 For mail:

* Unless you have your own Internet access through an Internet provider, be sure to check with your employer about ownership of electronic mail. Laws about the ownership of electronic mail vary from place to place.

* Unless you are using an encryption device (hardware or software), you should assume that mail on the Internet is not secure. Never put in a mail message anything you would not put on a postcard.

* Respect the copyright on material that you reproduce. Almost every country has copyright laws.

* If you are forwarding or re-posting a message you've received, do not change the wording. If the message was a personal message to you and you are re-posting to a group, you should ask permission first. You may shorten the message and quote only relevant parts, but be sure you give proper attribution.

* Never send chain letters via electronic mail. Chain letters are forbidden on the Internet. Your network privileges will be revoked. Notify your local system administrator if your ever receive one.

* A good rule of thumb: Be conservative in what you send and liberal in what you receive. You should not send heated messages (we call these "flames") even if you are provoked.

On the other hand, you shouldn't be surprised if you get flamed and it's prudent not to respond to flames.

* In general, it's a good idea to at least check all your mail subjects before responding to a message. Sometimes a person who asks you for help (or clarification) will send another message which effectively says "Never Mind". Also make sure that any message you respond to was directed to you. You might be cc:ed rather than the primary recipient.

* Make things easy for the recipient. Many mailers strip header information which includes your return address. In order to ensure that people know who you are, be sure to include a line or two at the end of your message with contact information. You can create this file ahead of time and add it to the end of your messages. (Some mailers do this automatically.) In Internet parlance, this is known as a ".sig" or "signature" file. Your .sig file takes the place of your business card. (And you can have more than one to apply in different circumstances.)

* Be careful when addressing mail. There are addresses which may go to a group but the address looks like it is just one person. Know to whom you are sending.

* Watch cc's when replying. Don't continue to include people if the messages have become a 2-way conversation.

* In general, most people who use the Internet don't have time to answer general questions about the Internet and its workings. Don't send unsolicited mail asking for information to people whose names you might have seen in RFCs or on mailing lists.

* Remember that people with whom you communicate are located across the globe. If you send a message to which you want an immediate response, the person receiving it might be at home asleep when it arrives. Give them a chance to wake up, come to work, and login before assuming the mail didn't arrive or that they don't care.

* Verify all addresses before initiating long or personal discourse. It's also a good practice to include the word "Long" in the subject header so the recipient knows the message will take time to read and respond to. Over 100 lines is considered "long".

* Know whom to contact for help. Usually you will have resources close at hand. Check locally for people who can help you with software and system problems. Also, know whom to go to if you receive anything questionable or illegal. Most sites also have "Postmaster" aliased to a knowledgeable user, so you can send mail to this address to get help with

mail.

* Remember that the recipient is a human being whose culture, language, and humor have different points of reference from your own. Remember that date formats, measurements, and idioms may not travel well. Be especially careful with sarcasm.

* Use mixed case. UPPER CASE LOOKS AS IF YOU'RE SHOUTING.

* Use symbols for emphasis. That *is* what I meant. Use underscores for underlining. _War and Peace_ is my favorite book.

* Use smileys to indicate tone of voice, but use them sparingly. :-) is an example of a smiley (Look sideways). Don't assume that the inclusion of a smiley will make the recipient happy with what you say or wipe out an otherwise insulting comment.

* Wait overnight to send emotional responses to messages. If you have really strong feelings about a subject, indicate it via FLAME ON/OFF enclosures. For example:
FLAME ON: This type of argument is not worth the bandwidth it takes to send it. It's illogical and poorly reasoned. The rest of the world agrees with me.
FLAME OFF

* Do not include control characters or non-ASCII attachments in messages unless they are MIME attachments or unless your mailer encodes these. If you send encoded messages make sure the recipient can decode them.

* Be brief without being overly terse. When replying to a message, include enough original material to be understood but no more. It is extremely bad form to simply reply to a message by including all the previous message: edit out all the irrelevant material.

* Limit line length to fewer than 65 characters and end a line with a carriage return.

* Mail should have a subject heading which reflects the content of the message.

* If you include a signature keep it short. Rule of thumb is no longer than 4 lines. Remember that many people pay for connectivity by the minute, and the longer your message is, the more they pay.

* Just as mail (today) may not be private, mail (and news) are (today) subject to forgery and spoofing of various degrees of detectability. Apply common sense "reality checks" before assuming a message is valid.

* If you think the importance of a message justifies it, immediately reply briefly to an e-mail message to let the sender know you got it, even if you will send a longer reply later.

* "Reasonable" expectations for conduct via e-mail depend on your relationship to a person and the context of the communication. Norms learned in a particular e-mail environment may not apply in general to your e-mail communication with people across the Internet. Be careful with slang or local acronyms.

* The cost of delivering an e-mail message is, on the average, paid about equally by the sender and the recipient (or their organizations). This is unlike other media such as physical mail, telephone, TV, or radio. Sending someone mail may also cost them in other specific ways like network bandwidth, disk space or CPU usage. This is a fundamental economic reason why unsolicited e-mail advertising is unwelcome (and is forbidden in many contexts).

* Know how large a message you are sending. Including large files such as Postscript files or programs may make your message so large that it cannot be delivered or at least consumes excessive resources. A good rule of thumb would be not to send a file larger than 50 Kilobytes. Consider file transfer as an alternative, or cutting the file into smaller chunks and sending each as a separate message.

* Don't send large amounts of unsolicited information to people.

* If your mail system allows you to forward mail, beware the dreaded forwarding loop. Be sure you haven't set up forwarding on several hosts so that a message sent to you gets into an endless loop from one computer to the next to the next.

2.1.2 For talk:
